Overview

ABSTRACT

To take care of the limitations of the earlier Time Use Studies in India and to meet the new emerging data requirements, Ministry of Statistics and Programme Implementation, Government of India, therefore, conducted a pilot Time Use Survey in 18620 households spread over six selected states , namely, Haryana, Madhya Pradesh, Gujarat, Orissa, Tamil Nadu and Meghalaya during the period July, 1998 to June, 1999.

Following were the main objectives of this survey:

1. To develop a conceptual framework and a suitable methodology for designing and conducting time use studies in India on a regular basis. Also, to evolve a methodology to estimate labour force/work force in the country and to estimate the value of unpaid work in the economy in a satellite account.
2. To infer policy/programme implications from the analysis of the data on (a) distribution of paid and unpaid work among men and women in rural and urban areas, (b) nature of unpaid work of women including the drudgery of their work and (c) sharing of household work by men and women for gender equity.
3. To analyze the time use pattern of the individuals to understand the nature of their work so as to draw inference for employment and welfare programmes for them.
4. To analyze the data of the time use pattern of the specific section of the population such as children and women to draw inferences for welfare policies for them.
5. To collect and analyze the time use pattern of people in the selected states in India in order to have a comprehensive information about the time spent by people on marketed and non-marketed economic activities covered under the 1993-SNA, non marketed non-SNA activities covered under the General Production Boundary and on personal care and related activities that cannot be delegated to others.
6. To use the data in generating more reliable estimates on work force and national income as per 1993 SNA, and in computing the value of unpaid work through separate satellite account,

Keeping in view the importance of the survey for India and our specific socio-economic situation similar to other developing countries, this survey was conducted using own financial, technical and manpower resources. Moreover, to ensure capacity building for conducting such surveys on a regular basis, this survey was conducted by utilizing the official statistical system machinery.

KIND OF DATA

Sample survey data [ssd]

UNITS OF ANALYSIS

Randomly selected households based on sampling procedure and members of the household

Scope

NOTES

In this survey information were collected about the household size, possession of agricultural land, religion of the household, structure of the houses, head of households, etc thru Block-1 of the schedule.

Block-2 covered particulars regarding the age, sex, marital status, educational level, industrial and occupational characteristics of the members of the selected households were collected. As the activity pattern of the household members gets affected due to presence of a disabled member in the household. information about the presence of disabled member in the household was also collected. Similarly. on state level no good data are available about the extent of participation of women in the household decision making. With the present day emphasis on empowerment of women, this information is very vital. Therefore, an attempt was also made to enquire from females aged 18 years above whether they were participating in the decision making in the household. The participation was judged by considering"" their involvement in the purchase of durable consumer goods in the household.

Block-3 was devoted entirely for time Disposition of Persons on Selected Days of the Week

After careful consideration interviewing method rather than diary or observation method was adopted for collection of data . A reference period of one week was adopted for collecting the data. With a view to capture the variation in the activity pattern, data were collected for three types of days namely, normal, weekly variant and abnormal. Further, data for each type of these days were collected with a recall lapse of only one-day

KEYWORDS

Time Use, Survey, 1998

Coverage

GEOGRAPHIC COVERAGE

Time Use Survey was conducted in 6 selected States namely, Haryana, Madhya Pradesh, Gujarat, Orissa, Tamil Nadu and Meghalaya.

UNIVERSE

The survey used the interview method of data collection from a sample of randomly selected households and members of the household

Producers and Sponsors

PRIMARY INVESTIGATOR(S)

Sampling

Sampling Procedure

The sampling design adopted in the survey was three stage stratified design. The first, second and third stages were the district, villages/urban blocks and households. Proper stratification of the districts in the selected states were done using the population density and proportion of tribal population to ensure capturing of the variability in the population. In the villages/urban blocks also sub-stratification was adopted to ensure representation of all types of households in the Survey.

As no previous survey was conducted on this topic and methodologies to be used were not firmed up, it was decided to conduct this survey on a pilot basis. However, to ensure the use of data collected in the pilot survey also, a proper sampling procedure was followed.

Refer the attached document named 'Report' attached under external resource

Deviations from Sample Design

There was no deviation from the original sample deviation.

Response Rate

The total number of households covered in the sample was 18,591 as against 18,620 originally planned. 68 % of the households was in rural areas. Therefore, the non-response at 0.1 % was negligible.

Weighting

For generating any estimate, one has to extract relevant portion of the data, and aggregate after applying the weights.

Weights (or multipliers) VARIABLES are given at the end of record of each dataset. The weights (multipliers) are WGT_SS for Sub-sample-wise estimation and WGT_Combined for combined subsample estimates.

All records of a household will have same weight figure. In case of those Blocks/Levels, where Item/Person Sl.No. is not applicable the field is filled up with 00000.

Use of subsample-wise weights (multipliers)

For generating subsample-wise estimates based on data of all subrounds taken together, either Subsample-1 households or Subsample-2 households are to be considered at one time. Subsample code is available in the dataset For generating subsample-combined estimates based on data of all subrounds taken together all households are to be considered.

Questionnaires

Overview

The final questionnaire used in the survey was evolved after a number of discussion with the academic experts and the practising survey statisticians. The final questionnaire consisted of following three parts:

- i. Schedule 0.1: Listing Questionnaire for the Rural Areas
- ii. Schedule 0.2: Listing Questionnaire for the Urban Areas
- iii. Schedule 0.3: Household Questionnaire which consist of following Blocks

- (a) Block 0: Identification of Sample Households
- (b) Block 1: Household Characteristics
- (c) Block 2: Particulars of Household Members
- (d) Block 3: Time Disposition of Persons on Selected Days of the Week

A copy of the questionnaire is attached as external resource

Data Collection

Data Collection Mode

Face-to-face [f2f]

Data Collection Notes

The pros and cons of getting the survey conducted through a Non-Governmental Organisation (NGO) was deliberated in great details. As the survey was to be conducted in 6 States, the strength of the NGO in terms of skilled manpower was an important consideration. As it was difficult to identify such a NGO, it was decided to involve, Directorate of Economics and Statistics of the respective States in this exercise. These organisations already conduct large scale surveys and have their offices located at the districts and block level. Moreover, they also have the data processing facilities. The use of these organisations helped in fast training of the already experienced investigators, reduction in the cost of the survey due to short distance travel involved by the investigators, avoidance of the involvement of another agency for the data entry and processing work. The involvement of these agencies also helped in the capacity building in these organisations.

Questionnaires

The final questionnaire used in the survey was evolved after a number of discussion with the academic experts and the practising survey statisticians. The final questionnaire consisted of following three parts:

- i. Schedule 0.1: Listing Questionnaire for the Rural Areas
- ii. Schedule 0.2: Listing Questionnaire for the Urban Areas
- iii. Schedule 0.3: Household Questionnaire which consist of following Blocks
 - (a) Block 0: Identification of Sample Households
 - (b) Block 1: Household Characteristics
 - (c) Block 2: Particulars of Household Members
 - (d) Block 3: Time Disposition of Persons on Selected Days of the Week

A copy of the questionnaire is attached as external resource

Supervision

To provide technical guidance for various activities in the Survey a Technical Advisory Committee (TAC) was constituted under the Chairmanship of Prof. Indira Hirway, a non-official expert from Centre for Development Alternatives, Ahmedabad. The composition and term of reference of the TAC are given at Annexure-I. A number of meetings of the TAC was held to finalise the questionnaire, sampling design, tabulation plan etc. The members of the TAC also visited the field to see the quality of field work. The officers of the Central Statistical Organization involved with this Survey frequently inspected the field work. For each State participating in the Survey, a Technical Advisory Committee was also constituted which has the representation of non-official members also. These State level

Advisory Committees were also requested to meet every quarter to sort out the local problems and provide the guidance. Each State was also asked to submit regular progress report of the field work. Because of these strict monitoring mechanism, field work of the Survey was completed, as per schedule in July, 1999.

Data Processing

Data Editing

The data entry and validation work of the Survey was handled by the States for which data entry and validation packages were supplied by the Central Statistical Organization. A Workshop was also organized to sort out the various problems faced by the States in the use of these packages. For evolving the data entry and validation package, the help of Data Processing Division of the National Sample Survey Organization was taken. The validated data was sent by States to the CSO and the final processing of the data was done by the Computer Centre of the Department. In spite of severe problem faced in the operation of main-frame computer at the Computer Center, data processing work of the Survey completed by the end of November, 99.
