

Report No.420

INDEBTEDNESS OF RURAL HOUSEHOLDS AS ON 30.6.1991

DEBT AND INVESTMENT SURVEY

NSS FORTY-EIGHTH ROUND

January - December 1992

NATIONAL SAMPLE SURVEY ORGANISATION

DEPARTMENT OF STATISTICS

MINISTRY OF PLANNING & PROGRAMME IMPLEMENTATION

GOVERNMENT OF INDIA

JULY 1998

(i)

PREFACE

The National Sample Survey Organisation (NSSO) has been conducting All-India surveys decennially on Debt and Investment since its 26th round (1971-72) in both rural and urban areas. These surveys generate basic quantitative information on assets, liabilities and capital expenditure in the household sector of the economy. The All-India Debt and Investment Survey (AIDIS), which was carried out as part of the 48th round of the NSSO during the period January to December 1992, was the fifth such survey conducted at the all-India level. Prior to 1971-72, two surveys viz. "All-India Rural Credit Survey" and "All-India Rural Debt and Investment Survey" had been completed in 1951-52 and in 1961-62 respectively by the Reserve Bank of India (RBI) for rural areas only.

The present report is the first part of the second report in the series of five reports planned to be brought out on the basis of data collected in the 48th round (January to December 1992). This report gives the estimates of indebted households and the amount of debt classified by various correlates at the state and all-India level in rural sector. This consists of three Chapters and one Appendix. Chapters one and two of the report deal with the introduction and brief note on sample design and estimation procedure respectively. Chapter three deals with summary results of the survey and their comparison with the results of the previous surveys.

The field work of the survey was done by the Field Operations Division, data processing and tabulation work were handled by the Data Processing Division and the Computer Centre respectively. The Survey Design and Research Division was responsible for designing the survey and preparing this report.

I am thankful to the members of the Working Group for their valuable guidance at various phases of the work - from designing of the schedule of enquiry to the preparation of this report. I am very much grateful to the members of the Governing Council, Heads of various Divisions of NSSO and their colleagues for their contributions in preparing the report.

New Delhi
July, 1998

(S. Ray)
Chief Executive Officer
National Sample Survey Organisation.

HIGHLIGHTS

Magnitude of household debt

Out of the overall aggregate outstanding debt of Rs. 37,343 crores reported by the household sector as on 30.6.91, rural households accounted for roughly 60%, i.e., Rs. 22,211 crores.

Cultivator households owed Rs.17,668 crores, which was about four-fifths of the outstanding debt of rural households.

Prevalence of indebtedness by credit agency

In 1991, over 23 per cent of rural households were found to be indebted.

One out of every six rural households was indebted to institutional agencies. Only one out of 10 households was indebted to non-institutional agencies.

In states like Andhra Pradesh, Rajasthan and Tamil Nadu, where incidence of debt was found to be relatively high, an exceptionally high proportion of households was indebted to non-institutional agencies.

Debt burden by asset holding and credit agency

A sharp rich-poor divide prevailed in rural areas with respect to the burden of debt. This burden was as high as 14% for the poorest households viz. those owning assets less than Rs.5,000, but only 1% for the richest, namely, those owning assets at least Rs.2.5 lakhs.

The rich-poor divide was even sharper when the credit agency was non-institutional. For loans taken from such an agency, the debt burden, as a ratio of household assets, was just 0.22% for the richest, but a heavy 8% for the poorest households.

Share of debt by credit agency

The rise in the share of institutional debt of rural households has slowed down and the share was 64% in 1991, after increasing rapidly from 17% in 1961 to 29% in 1971 and 61% in 1981.

Among institutional agencies, cooperative societies and commercial banks were the two most important sources in both rural and urban areas in 1991. They together accounted for 55% of the rural and 39% of the urban debt.

Among non-institutional agencies, professional money lenders were of prime importance in 1991, when they disbursed about 10% of the aggregate debt in rural and urban areas. Relatives and friends had advanced 5% of the rural and 10% of the urban debt.

Continued to next page

HIGHLIGHTS(contd.)

Cost of servicing debt

Out of the total debt of rural households in 1991, about 66% and 22% were at simple and compound interest respectively. Only about 4% of the rural debt was extended at concessional rates, while about 9% was free of any interest burden.

In states like Haryana, Orissa, etc., a remarkably high share of the rural debt was contracted at a relatively low rate of simple interest (less than 15%). Similarly in many states including Bihar, Punjab etc. most of the rural debt contracted at compound interest was at a relatively moderate rate of interest (between 10% to 15%).

Duration of debt

About 60% of the rural debt in 1991 was of relatively short duration - 37% for less than a year and 23% for between 1 to 2 years.

In Orissa on the other hand, as much as 64% of the rural debt was of more than 2 years duration .

Debt according to purpose

Debt incurred just for household expenditure, other than those for expenditure on fixed capital, accounted for about a third of the outstanding debt of households in both rural and urban areas in 1991.

This share was even higher -- as high as 60% -- for the rural poor, who owned assets valued at less than Rs.10,000. Only about 11% of the debt of such poor households was for productive purposes.

Current liabilities

For rural India, in 1991, incidence of current liabilities was 13% and the average value of current liabilities was Rs.210.

The average value of current liabilities for cultivators was about Rs.250, which was much larger than that for non-cultivators -- Rs.129.

Chapter 1

Introduction

1.The Report in Perspective

1.1.1 The All-India Debt and Investment Survey(AIDIS) was carried out as part of the 48th Round of the National Sample Survey Organisation(NSSO) during January to December 1992. This was the fifth such survey conducted at the all-India level. At present, the decennially conducted AIDIS is the only nation-wide enquiry providing data on household assets, indebtedness and capital expenditure.

1.2.1 *Objective.* The main objective of the AIDIS is to generate reliable estimates on assets, liabilities and capital expenditure of the household sector. The survey provides the details of household liabilities required for the formulation of credit policy of financial institutions and planning for development.

1.3.1 *Plan for release of results:* The first Report (NSS Report No.419) gave the survey estimates on assets and liabilities(cash loans) of rural and urban households as on 30th June 1991. The present report is the first part of the second in a series of five reports to be brought out on the AIDIS conducted in the NSS 48th round. In general, the estimates are provided for the country as a whole, as well as for all the states and union territories.

1.3.2 The second report in the series is planned to be brought out in two parts -- one for rural areas and the other for urban areas. It will cover several aspects of household indebtedness like number of households

reporting cash loans and current liabilities, average amount of current liabilities and distribution of outstanding cash dues of households by various characteristics, such as rate of interest, duration of loan, credit agency etc. The present report is the first part and deals with rural areas only.

1.3.3 The third report would examine different aspects of the related flow variables by tabulating the number of households reporting current borrowings and repayments, amount of borrowings and repayments etc. by different variables like type of loan, nature of interest, type of security, type of mortgage etc. The fourth report will deal with selected aspects of household assets and liabilities for different social groups. In the fifth report, some broad features of capital expenditure, sale and loss of physical assets by the rural and urban households during the agricultural year 1991-92 are proposed to be discussed.

2. Background

2.1.1 In order to study both the demand and supply sides of credit in the household sector, the Reserve Bank of India(RBI) had conducted the "All-India Rural Credit Survey" in 1951-52. Information on assets, economic activities, particulars of credit operations and the incidence of indebtedness in the rural areas were collected in the survey to assess the demand for rural credit. Further, data on the extent and mode of operations of different credit agencies were also collected

with a view to examine the supply side of the credit.

2.1.2 The first Rural Credit Survey was followed up with a similar survey in 1961-62 by the RBI. The scope of the survey was extended to include capital expenditure in the household sector and other associated indicators of the rural economy. The second survey was thus called "All India Rural Debt and Investment Survey".

2.1.3 The responsibility of conducting the third such survey was given to the National Sample Survey Organisation(NSSO). The NSSO undertook the All India Debt and Investment Survey(AIDIS), after integrating it with the Land and Livestock Holding Survey(LHS), in its 26th round survey during July 1971-September 1972. During this survey, for the first time since its inception, the scope of the Debt and Investment Survey was extended to urban areas as well. Since then, NSSO is regularly conducting AIDIS once in ten years. The fourth decennial survey on Debt and Investment was conducted in the NSS 37th round survey during the calendar year 1982. In this survey, data for AIDIS and LHS were collected from the same set of sample households.

2.1.4 The present AIDIS was also carried out along with the LHS in the NSS 48th round(1992). Although the objectives of the survey remained the same as those of the earlier surveys, some changes were made in the sampling design to suit the requirements of the AIDIS. First, an independent sample of households was selected exclusively for the AIDIS in rural areas to ensure better representation of the indebted households. Secondly, for the urban areas, although both the surveys viz. AIDIS and LHS, were conducted in a common set of households, the sample of households was selected with

the specific aim of generating reliable estimates for the AIDIS.

3. Scope

3.1.1 *Items of enquiry:* In the present AIDIS(1992), the NSSO collected information on the assets and liabilities position of the households as on 30.6.1991. The details of all financial transactions, particularly those of cash borrowings and repayments, during the agricultural year 1991-92 (AY 91-92) were collected along with the liabilities of the households. Besides, the survey gathered information on the amount of capital expenditure incurred by the households during the same reference period, under different heads, like residential plots, houses and buildings, farm business and non-farm business. Data on acquisition, disposal and loss of assets during this period were also collected in this survey.

3.2.1 *Geographical coverage:* The 48th Round was planned to cover the whole of Indian Union except

- (i) Ladakh and Kargil districts of Jammu & Kashmir,
- (ii) 768 interior villages of Nagaland (out of a total of 1119 villages) located beyond 5 kms. of a bus route,
- (iii) 172 villages in Andaman & Nicobar Islands (out of a total of 520 villages) which are inaccessible throughout the year.

However, the survey could not be conducted in certain districts of Jammu & Kashmir viz. Anantnag, Pulwana, Srinagar, Badgam, Baramula and Kupwara, and the district of Amritsar in Punjab due to unfavourable field conditions.

4. Method of data collection

4.1.1 The survey used the interview method of data collection from a sample of randomly selected households. The field workers paid two visits to each sample household during the period of survey with a gap ranging between 4 to 8 months. Two separate and slightly different schedules of enquiry were used for the two visits.

4.2.1 *Survey period:* The survey period for the 48th round survey was the calendar year 1992. In order to reduce recall error, particulars relating to the entire agricultural year were collected by visiting each sample household twice during the survey period. The first visit to the sample households was made during a period of 8 months, January to August, while the second visit was made during a shorter period of 4 months—September to December. The longer period for the first visit was kept in view of the higher workload for the field staff for it compared to the second visit.

4.2.2 During the first visit to a sample household, the investigator collected information on assets owned on the date of survey as well as addition and depletion of assets during the period 1st July 1991 to the date of survey. The estimates of asset possessed by the households as on 30.6.1991 are based on these data. The survey used the same procedure for assessing the indebtedness position of the households as on 30.6.1991. The estimates of cash dues outstanding on 30.6.91 presented in this report are based on the first-visit data on dues outstanding on the date of survey and borrowings and repayments made between 1st July 1991 and the date of survey, both days included.

4.2.3 In addition, the first-visit schedule provided for collection of data on the amount and other particulars of borrowings and repayments during the first half of the AY 91-92, i.e. during 1.7.1991 to 31.12.1991. The data on capital expenditure and acquisition, disposal and loss of assets of the households during 1.7.1991 to 31.12.1991 were also collected in the first visit.

4.2.4 During the second visit to the sample households, data were collected to assess the borrowing and repayments made and loans written off during the second half of the AY 91-92, i.e., during 1.1.1992 to 30.6.1992. Similarly, data on capital expenditure and acquisition, disposal and loss of assets during 1.1.1992 to 30.6.1992 were collected in the second visit. No provision was kept for the collection of information on assets in the schedule of the second visit. Other differences between the second and first visit schedules were mostly due to the fact that information pertained to two different halves of AY 91-92 in the two visits.

5. Valuation of Physical Assets

5.1.1 The survey evaluated a physical asset acquired prior to 30th June 1991 at the current market price of such an asset in its existing condition prevailing in the locality. An asset which was disposed of during the reference period (i.e. during 1.7.1991 to the date of survey) in a manner other than by sale was also evaluated at the current market price. If an asset was disposed of by way of sale during the reference period, the sale price was considered as the value of the asset.

5.1.2 On the other hand, if a physical asset was acquired by way of purchase or construction during the reference period, the purchase price or the total expenditure incurred on construction was taken as its

value. To evaluate an asset acquired through own-account construction, the value of labour and materials supplied from the household stock, imputed at current market price, was included in the total expenditure.

5.1.3 For evaluation of an asset 'otherwise acquired', i.e. acquired in a manner other than by purchase or construction during the reference period, the investigators used the current price of the asset in its existing condition prevailing in the locality. However, if an 'otherwise-acquired' asset was sold during the reference period, the sales proceeds was taken as its value.

6. Reference Period

6.1.1 All the estimates of assets and liabilities presented in this report are for a fixed reference date of 30.6.1991. These are based entirely on the data collected during the first visit to the sample households. As stated in Section 4, the position of assets and liabilities of the sample households as on 30.6.1991 was derived from the stock data on the date of survey and the data on transactions during the intervening period.

6.1.2 The estimates of number of households presented in this report are based on data with a moving reference point, from 1.1.1992 to 31.8.1992, which spans a period of eight months. These estimates, therefore, may be taken to represent the households existing as on 30.4.1992, the mid-point of the eight-month period.

7. Sample Design

7.1.1 The sample design adopted for the survey was essentially a stratified two-stage one for both rural and urban areas. The census villages and urban blocks were the

first stage units (FSUs) for the rural and urban sectors respectively, while households were the second stage sampling units (SSUs) for both the sectors. The selection of villages was done with probability proportional to population (with replacement), based mainly on the 1981 census list of villages. The selection of urban blocks was done with equal probability without replacement based on Urban Frame Survey (UFS) conducted by the NSSO on an on-going basis. The details of the sample design and estimation procedure adopted for the survey are given in Chapter 2 of this report.

7.2.1 *Sample size - first stage units:* In all, 9052 villages were planned to be surveyed in this round. Of these, 4328 villages were allocated to the central sample which was the part surveyed mainly by the NSSO field staff. The remaining villages were allocated to the state sample, which was the part to be surveyed by the state agencies. In the urban sector, the allocations for the central and state samples were 2484 and 3076 respectively. This report is based on the estimates obtained from the central sample alone. The number of villages and urban blocks actually surveyed as the central sample were 4231 and 2419 respectively.

7.2.2 *Sample size - second stage units:* For the AIDIS, 9 households from every sample village and every urban block were planned to be surveyed. In the central sample, the actual number of households surveyed was 36425 in the rural sector and 20606 in the urban sector.

8. Concepts and Definitions

8.1.1 The concepts and definitions of some of the important terms used in the survey and relevant to this report are explained below :

8.2.1 Household: A household was a group of persons who normally lived together and took food from a common kitchen. However, a boarding house, a hotel or a hostel was treated as a cluster of households, where each individual boarder formed a separate household. If, however, a group of persons among them normally pooled their income for spending, they together were treated as constituting a single household. Barracks of military and paramilitary forces, orphanages and vagrant-houses were excluded from the scope of the survey.

8.2.2 Household size: The size of a household was taken to be the number of members normally residing in it. This size included temporary stay-aways but excluded temporary visitors and guests of the household.

8.3.1 Household assets: Household assets represented all that were owned by the household and had money value. These included all physical assets, financial assets and dues receivable on loans.

8.3.2 However, the AIDIS does not include crops standing in the fields and stock of commodities held by the household in the household assets. Currency notes and coins in hand were also not considered as assets in any of the earlier surveys owing to difficulties in collecting reliable data on them. However, in the present survey, an attempt was made to collect the amount of cash in hand of the household, as on the date of survey. The estimates of household assets, presented in this report, include the amount of cash held by the households as on the date of survey.

8.4.1 Liabilities: All claims against the household held by others were considered liabilities of the household. Thus, liabilities of a household included all loans of the

household, irrespective of whether they were in cash or kind, unpaid bills of grocers, doctors, lawyers etc. Different kinds of liabilities are defined below :

8.4.2 Cash loans: All loans taken in cash were considered as cash loans, irrespective of whether those loans were repaid or proposed to be repaid in cash or in kind. Cash loans, generally, covered borrowings at specific rate of interest for a specific period of time. However, if a loan was contracted without any interest from relatives and friends, it was considered as cash loan. Dues payable by the household owing to hire-purchase of goods was treated as cash loans.

8.4.3 Kind loans: All loans taken in kind (except the cases of hire-purchase) irrespective of whether those were already repaid or yet to be repaid in cash or in kind were considered as kind loans payable.

8.4.4 Other liabilities: As distinguished from cash loans, 'other liabilities' comprised all liabilities arising out of purchase of goods and services for consumption from traders, doctors, lawyers etc. Some households buy goods from grocers, milkmen etc. on credit and make payment at regular intervals. All such dues payable by the household were considered as 'other liabilities', if they were not repaid within the due dates. Similarly, outstanding taxes, rent payable to Government, other public bodies, landlords etc., were included under 'other liabilities'. In addition, 'other liabilities' included trade debt arising out of various commercial transactions made by the household.

8.4.5 Current liabilities : All "kind loans" and "other liabilities" of a household, as defined above, taken together constituted its current liabilities.

8.5.1 Household Type: The report presents estimates of assets and liabilities for different types of households. Two different classifications have been adopted for the rural and urban areas.

8.5.2 Classification of rural households: The rural households were classified into two types namely, cultivator and non-cultivator households.

Cultivator households: All rural households operating at least 0.002 hectare of land during the AY 91-92 were treated as 'cultivator households'.

Non-cultivator households: All rural households operating no land or land less than 0.002 hectare were considered as non-cultivator households.

8.5.3 Classification of urban households: In urban areas, each household was categorised in one of the following two groups, namely, self-employed and 'others' as per the definitions given below :

Self-employed: Persons engaged in the farm or non-farm enterprises of their households are called self-employed workers. In urban areas, a household was considered as self-employed, if more than 50% of its income during the 365 days preceding the date of survey was derived from self-employment of its members.

Other urban household: All the remaining urban households were treated as 'other' households .

8.5.4 Major household type: This refers to *cultivator* and *non-cultivator* (i.e. other than cultivator) households for the rural areas and *self-employed* and *other* (i.e. other than self-employed) households for the urban areas.

8.6.1 Credit agency : A person, an association of persons or an organisation dispensing loans to a household was deemed as a credit agency. Credit agencies were of institutional or non-institutional nature.

8.6.2 Institutional agencies : The specific forms of institutional credit agencies considered in this survey are defined below :

(i) **Government:** The Central and state governments may act as an agency for advancing loans. Government may advance loans through Departments like Revenue, Agriculture, Industries or Rural Development etc. Finance from Government may also be channelled through Khadi and Village Industries Commission. All loans received from the above sources have been treated as from 'Government'.

(ii) **Cooperative Society/Bank :** Loan may be obtained from agencies, such as cooperative society/banks like primary cooperative credit societies, primary cooperative marketing societies, district or central cooperative banks, primary or central loan development banks, handloom weavers cooperative societies and other industrial or other types of cooperative societies etc. Such societies/banks have been treated as 'cooperative society/bank'.

(iii) **Commercial Banks including Regional Rural Bank :** All loans taken from commercial banks, including nationalised banks, regional rural banks and State Bank of India and its associates like State Bank of Rajasthan, State Bank of Mysore; Foreign commercial banks operating in India have been considered as loans taken from 'commercial banks'.

(iv) **Insurance:** All loans taken from Life Insurance Corporation, Postal Life Insurance and other insurance funds will be considered as loans taken from 'insurance'.

(v) **Provident Fund:** Loans taken from the Provident Fund account, such as Contributory Provident Fund, General Provident Fund,

Public Provident Fund and any other provident fund in the public/private sector offices and companies, by the employees of the concern, or account holder in case of Public Provident Fund, will be classified as loans taken from 'Provident Fund'.

(vi) *Other Institutional Agencies* : Some households may report loans taken from institutions other than those listed above. Institutions such as State Financial Corporations, Small Industries Development Bank of India (SIDBI), Small Industries Development Corporation (SIDC) etc., which play promotional and developmental role through extending finance, may be grouped under this head. Financial and Investment companies which are Public Limited Companies, whether in the private or public sector, were also classified under this category of institutional agencies.

8.6.3 Non-Institutional Agencies: The specific forms of Non-Institutional agencies considered in the survey are defined below:

(i) *Landlord* : The credit agency for loans given by landlords to their own tenants has been taken as 'landlord'. If the tenant took a loan from a person who was not his landlord, but belonged to the landlord class, the credit agency in such cases was taken as 'agriculturist money lender' or 'professional money lender' etc., depending upon the type of money lending business done by the landlord.

(ii) *Agriculturist money lender* : An agriculturist money lender is defined as one whose major profession was agriculture and whose money lending business was, comparatively, of minor importance. When a landowner or a cultivator derived the major part of his income from money lending, he was not classified as an 'agriculturist

money lender' but as a 'professional money lender'.

(iii) *Professional money lender*: A professional money lender was a person who earned a major part of his income from money lending.

(iv) *Trader*: A trader here is defined as a person whose principal occupation was trading.

(v) *Relatives & friends* : If a loan was received from one of the relatives or friends free of interest, it was considered as a loan taken from 'relatives and friends'. If the loan carried an interest, it was considered as taken from an 'agriculturist money lender', 'trader' etc., depending upon the type of business carried out by the relative or the friend.

(vi) *Doctors, lawyers & other professionals*: The term is self-explanatory.

(vii) *Others* : Any non-institutional credit agency not covered above was considered under this category.

8.7.1 Scheme of lending : Sometimes, institutional agencies advance loans under various programmes or schemes for development of a particular community, area, industry etc. The different schemes of lending considered in the survey are integrated rural development programme (IRDP), differential rates of interest (DRI), self-employment scheme for educated unemployed youth, self-employment programme for urban youth, financial assistance to ex-servicemen for self-employment, advances to minority communities and employment guarantee scheme (EGS). In addition, institutional loans covered under some other specific scheme, other than those stated above, were considered under 'other schemes'. However, if institutional loans did not come under any

specific scheme, at all, they were regarded as not covered under any scheme.

8.8.1 Purpose of loan : The reason why a household contracted a loan is given by the purpose of loan. Even if the loan amount was utilised for a purpose other than that for which it was borrowed. Only the original purpose of borrowing was considered. If more than one purposes were involved, the purpose for which the maximum amount of loan was originally intended to be spent was considered. The purpose of borrowing varies: to incur expenditure in items relating to *farm business or non-farm business or other household uses*. The terms *farm business, non-farm business* and various types of expenditure are explained below:

(i) **Farm Business:** Farm business comprised household economic activities like cultivation, including cultivation of plantation and orchard crops, and processing of produce on the farm, eg. paddy hulling and gur making. Although gur making is a manufacturing activity, this was covered under farm business for the purpose of this survey only when such activity was carried out in the farm by indigenous method. Thus, such activities, when they were carried out under the registered sector and also under the un-registered sector outside the farm, were excluded from the purview of the farm business. Farm business also included activities ancillary to agriculture, like livestock raising, poultry, fishing, dairy farm activities, bee keeping and other allied activities.

(ii) **Non-farm business :** Non-farm business was defined as all household economic activities other than those covered in the farm business. Thus it covered manufacturing and repairing services, mining and quarrying, trade, transport and profession and services. However, all non-farm business enterprises which were registered under section 2m(i) or 2m(ii) and section 85 of Factories Act, 1948,

were excluded from the scope of this survey. Bidi and cigar manufacturing establishments, registered under Bidi and Cigar workers Act 1966, were also kept outside the coverage of this survey.

(iii) **Capital expenditure in farm business :** The expenditure incurred in farm business on account of new purchase, own construction, major repairs, bunding and other land improvement including reclamation of land, alterations and improvement of buildings and other constructions constituted the capital expenditure in farm business.

(iv) **Current expenditure in farm business :** This comprised the current expenditure in the farm business for raw materials etc. and that for normal repairs and maintenance of buildings, construction, machinery and equipment including transport equipment, furniture & fixtures and household durables.

(v) **Other expenditure in farm business :** This comprised some items of expenditure in the farm business, other than those covered under capital or current expenditure in farm business. Such items included purchase of land and land rights and old purchase of buildings, other constructions, machinery and equipment, including transport equipment, furniture & fixtures and household durables.

(vi) **Capital expenditure in non-farm business :** It consisted of the expenditure in non-farm business incurred on account of new purchase, own construction, additions, alterations, major repairs and improvements of buildings, other constructions and machinery and equipment including transport equipment, furniture and fixture and household durables. It also included bunding and other land improvement, including reclamation of land, pertaining to non-farm business.

(vii) **Current expenditure in non-farm business:** This was made up of the current expenditure in non-farm business for raw materials etc. and normal repairs and

maintenance of buildings, construction, machinery and equipment including transport equipment, furniture and fixtures and household durables.

(viii) *Other expenditure in non-farm business:* This comprised some items of expenditure in the non-farm business other than those covered under capital or current expenditure in the non-farm business. Such items included purchase of land and land rights and old purchase of buildings, other constructions, machinery and equipment, including transport equipment, furniture & fixtures and household durables.

(ix) *Capital expenditure for residential building in household :* This comprised the expenditure incurred in household on account of new purchase, own construction, major repairs, bunding and other land improvement including reclamation of land, alterations and improvement of buildings and other constructions.

(x) *Current expenditure in household:* This was made up of the current expenditure in household for raw materials etc. and that for normal repairs and maintenance of buildings, construction, machinery and equipment including transport equipment, furniture and fixtures and household durables.

(xi) *Other expenditure in household:* This comprised some items of expenditure in household, other than those covered under capital or current expenditure in household. Such items included purchase of land and land rights and old purchase of buildings, other constructions, machinery and equipment, including transport equipment, furnitures and fixtures and household durables. Further, all new purchases of the items mentioned under 'old purchase' and household expenditure on varied items such as on education, marriage, financial investment, repayment of debt etc. were also included under this head.

8.9.1 *Type of loan :* Loans were generally given for a specific period. Short-term loans were advanced for a period upto 12 months, medium-term loans, for a period ranging from 1 to 3 years and long-term loans, for a period exceeding 3 years. Short-term loans were sometimes given against pledge of commodities and without any pledge on other occasions.

8.10.1 *Type of Security:* Loans could differ by the type of security attached to them. The various types of security considered in the survey are: personal security, surety security or guarantee by third party, crop, first charge on immovable property, mortgage of immovable property, bullion/ornaments, shares of companies, government securities and insurance policies, agricultural commodities, movable property other than bullion, share etc. and agricultural commodities. If the type of security was not covered under any of the above specific types, it was deemed as 'other type of security'. Except for the type "first charge on immovable property" which is explained below, the rest are self-explanatory.

First charge on immovable property : This was the charge on an immovable property created by the first mortgagee when there were more than one mortgagee for the same immovable property. In such cases, the liability of any mortgagee was not deemed to be cleared unless the liabilities of all the previous mortgagees were cleared.

8.11.1 *Rate of interest_ :* For any loan taken by a household, this was the amount payable, per hundred rupees of loan, to the lender, per annum.

8.12.1 *Terms of interest :* For any loan taken by a household, rate of the interest payable per annum could be charged by the lender in four ways. These were : simple,

compound, concessional or nil. The last type meant that the concerned loan was 'interest free'. The other three types are self-explanatory. In the appendix tables, however, the expression "nature of interest" has been used in place of "terms of interest".

8.13.1 Duration of loan : This is the length of time between the actual date on which a loan was taken and the fixed date 30.6.91.

8.14.1 Major states: The discussion on summary of survey results in Chapter 3, besides covering the national level estimates, deals with the estimates for relatively large states - in terms of population - as well. These states are referred to as *major states* in the discussion. They are as follows: Andhra Pradesh, Assam, Bihar, Gujarat, Haryana, Himachal Pradesh, Jammu & Kashmir, Karnataka, Kerala, Madhya Pradesh, Maharashtra, Orissa, Punjab, Rajasthan, Tamil Nadu, Uttar Pradesh and West Bengal.

9. Contents of the Report

9.1.1 This report contains three chapters, including the present introductory chapter, and an appendix. Chapter 2 gives a fairly detailed description of the sample design and estimation procedure used for the survey. Chapter 3 discusses the main findings on outstanding cash dues and current liabilities of households as obtained from the survey data analysis. The detailed data, based on which this report is brought out, are presented in the Appendix.

9.2.1 Appendix: The Appendix of the report contains tables providing estimates of cash dues and current liabilities, by various characteristics of the loans taken by households as on 30th June 1991, at the state and all-India level, for rural areas only. For the purpose of compatibility with the figures reported in Report 419, the first report in this series, the term 'indebted households' would continue to stand for those households who had some cash loans outstanding as on 30.6.91.

9.2.2 It would be in order to mention here that the cell figures in any of these detailed tables, when added up, may not exactly equal the figure shown against the 'total' column (or line) due to (i) rounding off and/or (ii) presence of non-response cases. Footnotes have been given in the Appendix Tables wherever the non-response cases arise but are not shown separately in the tables.

9.2.3 All the estimates presented in this report are based on the central sample data only. However, to get an idea of sub-sample variations, only the basic distribution of households classified by major household type have been presented, separately for each sub-sample, in Table no. 2R of the appendix.

Chapter 2

Sample Design and Estimation Procedure

1. Sample Design

1.1.1 A stratified two-stage sampling design was adopted for the survey with the first stage units as census villages for rural areas and the Urban Frame Survey blocks for urban areas. Households formed the second stage units in both rural and urban areas.

1.2.1 *Sampling frame for first stage units (FSU's):* In the rural sector, the sampling frame in most of the strata was the 1981 census list of villages. However, in Assam, where the 1981 census was not undertaken, and in a few districts of other states, where the available list as per 1981 census was incomplete, the 1971 census list of villages was used. In the urban sector, the sampling frames used in most cases were the lists of NSS Urban Frame Survey (UFS) blocks. However, the 1991 census houselisting enumeration blocks were considered as the sampling units for some of the new towns declared as urban areas in the 1991 population census.

1.3.1 *Stratification:* Each state/union territory (u.t.) was divided into one or more agro-economic regions by grouping contiguous districts which are similar with respect to population density and crop pattern. In Gujarat, however, some districts were sub-

divided for the purpose of region formation on the basis of location of dry areas and the distribution of tribal population in the state. The total number of regions formed in the India as whole was 78.

1.3.2 In the rural sector, within each region, each district with a rural population of less than 1.8 million according to the 1981 census formed a single basic stratum. Districts with larger population were divided into two or more strata, depending on population, by grouping contiguous tehsils, similar as far as possible in respect of rural population density and crop pattern. In Gujarat, however, in the case of districts extending over more than one region, the portion of a district falling in each region constituted a separate stratum even if the rural population of the district as a whole was less than 1.8 million. Further, in Assam, the strata formed for the earlier NSS rounds on the basis of 1971 census rural population exactly in the above manner, but with a cut-off of 1.5 million population, were retained as the strata for rural sampling.

1.3.3 In the urban sector, strata were formed, again within NSS regions, on the basis of 1981 (1991 in some of the new towns) census population of towns. Each city with a population 10 lakhs or more formed a separate

*Household Indebtedness : Rural
1991-92*

stratum by itself. The remaining towns of each region were

grouped to form three different strata on the basis of 1981 (1991 in a few cases) census population. The strata were formed as details stated below :

Composition of Urban Strata :

stra- tum no.	population size class of towns
1	all towns with a population of less than 50,000
2	all towns with a population of 50,000 to 1,99,999
3	all towns with a population of 2,00,000 to 9,99,999
4	all towns with a population of 1 million and above

1.4.1 *Allocation of sample:* A total all-India sample of 6,812 first stage units (4,328 villages and 2,484 urban blocks) - determined on the basis of investigator strength in different states/u.t.'s and the expected workload per investigator - was initially allocated to the states/u.t.'s in proportion to central field staff available. The sample thus obtained for each state/u.t. was then allocated to its rural and urban sectors considering the relative sizes of the rural and urban population with almost double weightage being given for the urban sector. Within each sector of state/u.t., the allotted sample size was re-allocated to the different strata in proportion to the stratum population. All allocations were adjusted so that the sample size for a stratum was at least a

*Chapter 2
Sample Design & Estimation Procedure*
multiple of 4 for the rural and urban sectors separately. This was done to accomplish

equal sized samples in each sub-sample and sub-round. The only exception was Daman & Diu for which the first stage rural sample comprised 2 villages only.

1.5.1 *Selection of first stage units:* The selection of sample villages was PPS (with replacement) with population as the size variable, in the form of two independent sub-samples. The sample blocks were selected by simple random sampling without replacement, also in the form of two independent sub-samples.

1.5.2 *Arunachal Pradesh:* For the rural areas of Arunachal Pradesh, a cluster sampling procedure was followed. The field staff were supplied with a list of sample "nucleus" villages and were advised to select clusters of villages, each cluster being formed around a nucleus village, according to prescribed guidelines. The nucleus villages were selected circular systematically with equal probability, in the form of two independent sub-samples.

1.6.1 *Selection of hamlet-groups/sub-blocks:* Large villages and blocks were divided into a suitable number of hamlet-groups and sub-blocks, respectively, having more or less equal population content. Two hamlet-groups were then selected from large villages, whereas only one sub-block was selected from the large blocks. The hamlet-groups were selected circular systematically and the sub-block with equal probability.

1.7.1 *Selection of households:* Two different procedures of selection of households were used for the rural and urban sectors. Different procedures for the two sectors were necessary,

since in the rural sector schedules of enquiry for LHS survey and Debt & Investment survey were required

to be canvassed in two separate sets of sample households, while in the urban sector, both the schedules were to be canvassed in the same set of sample households.

1.7.2 In the rural sector, nine households were selected from each sample village/selected hamlet groups. For selecting a sample of nine households, each sample village/hamlet group was subdivided into 7 AIDIS sub-strata on the joint consideration of "land possessed" and "indebtedness status" of the households; first, all the households of the sample village/selected hamlet groups were divided into four LHS sub-strata by area of land possessed by them. Households possessing either no land or land less than 0.005 acre were grouped in sub-stratum 1. The rest of the households were then arranged in ascending order by area of land possessed and classified into three sub-strata, 2, 3 and 4, such that the total area of land possessed by the households in each of the 3 sub-strata was nearly the same. Each of the LHS sub-strata 1 and 2 was further divided into "indebted" and "not indebted" groups to form AIDIS sub-stratum 1 to 4. AIDIS sub-strata 5 to 7 are formed by first merging LHS substrata numbers 3 and 4 and then sub-divided by the merged group into 3 classes, viz., (a) indebted to institutional agencies with or without being indebted to non-institutional agencies (b) indebted to non-institutional agencies alone and

(c) not indebted. Independent sample of size 1,1,1,2,1,1&2 were selected circular systematically from the AIDIS sub-strata 1,2,3,4,5,6 and 7 respectively

1.7.3 In the urban sector, a sample of 9 households was selected from each sample urban block/sub-block. The households of a sample block/sub-block were classified into 7 AIDIS sub-strata, considering the monthly per capita consumption expenditure (mpce) and indebtedness status of the households. For this, the households were first grouped in three mpce classes, viz., less than A, A to B and B & above. The cut-off points A and B were determined at the state-level on the basis of mpce obtained from the survey on consumer expenditure, NSS 43rd Round, such that the mpce classes, below A, A to B, and B and above, respectively constituted 30 p.c, 60 p.c, and 10 p.c. of the urban population of the state. These mpce classes were further sub-divided by indebtedness status of the households to form 7 AIDIS sub-strata. Independent samples were selected circular systematically from each of the sub-stratum. The number of households was selected from sub-strata 1, 2, 3, 4, 5, 6 and 7 respectively 1, 1, 1, 1, 2, 2 & 1.

1.8.1 *Sample size:* In all, the survey covered 57,031 households spread over 6,650 sample villages/blocks. The number of sample villages and blocks surveyed, and the number of sample households surveyed, are given for different state/u.t.'s and all-India in Appendix Table 1R & 1U respectively for rural and urban sectors.

2. ESTIMATION PROCEDURE

2.1.1 The estimation procedure adopted in the 48th round for schedule 18.2 is briefly indicated here.

2.2.1 *Notations:* The notations used for describing the estimation procedure are given below :

s : subscript for s^{th} stratum
 i : subscript for i^{th} village/block
 t : subscript for t^{th} sub-stratum (i.e. household-strata within a village/block)
 j : subscript for j^{th} sample house-hold

L : total number of rural/urban strata in the state
 p : village population (used for sampling and as per frame)
 P : total population of a rural stratum (as per frame)

N : total number of blocks in an urban stratum as per frame. This notation is also used for total number of villages in a rural stratum of Arunachal Pradesh as per frame
 n : number surveyed villages/blocks including depopulated and zero cases available for tabulation (excluding casualty and other not received cases)

C : number of census villages in a surveyed revenue village
 D : number of hamlet-groups/sub-blocks formed

H : total number of households in the frame
 h : number of surveyed households (available for tabulation) in a sub-stratum

x , y : values of characteristics
 X or Y : total of x or y at the state level

\bar{Y}_s^2 : estimate of Y from the sample for rural sector
 $D' = D$ if $D=1$
 $=D/2$ if $D \geq 4$

Comment:

2.2.2 *Estimates of aggregates:* As sampling procedures were different for the rural and the urban sectors, the estimation formulae used for the two sectors was also different.

2.2.3 *Rural:* For the states and u.t.s, other than Arunachal Pradesh and Lakshadweep, the estimates for the aggregate for the s^{th} stratum is given by

$$\bar{Y}_s^2 = \frac{P_s}{n_s} \sum_{i=1}^{n_s} \frac{D'_s}{C_{si}} \frac{1}{p_{si}} \sum_{t=1}^7 \frac{H_{sit}}{h_{sit}} \sum_{j=1}^{h_{sit}} y_{sitj}$$

For Arunachal Pradesh ,

$$\bar{Y}_s^2 = \frac{N_s}{n_s} \sum_{i=1}^{n_s} \sum_{t=1}^7 \frac{H_{sit}}{h_{sit}} y_{sitj}$$

and for Lakshadweep,

$$\bar{Y}_s^2 = \frac{7}{n_s} \sum_{i=1}^{n_s} \frac{D'_s}{C_{si}} \sum_{t=1}^7 \frac{H_{sit}}{h_{sit}} y_{sitj}$$

2.2.4 Urban: For all the states, the estimate of aggregate of the s^{th} stratum is given by

$$\bar{Y}_s = \frac{N_s}{n_s} \sum_{i=1}^{n_s} D_s \sum_{t=1}^7 \frac{H_{sit}}{h_{sit}} \sum_{j=1}^{h_{sit}} y_{sitz}$$

2.2.5 State/u.t. level estimates: The aggregate estimates at the state /u.t. levels were worked out separately for the rural and urban sectors. For both the sectors, the aggregate estimate at the state/u.t. level was obtained as

$$\bar{Y}^2 = \sum_{s=1}^L \bar{Y}_s$$

2.2.6 Subsample estimates : Each subsample estimate was based on the data collected from the surveyed FSUs of the respective subsample. For each state/u.t. (or national level estimate) two subsample estimates were obtained separately for the rural and urban sectors. The formulae given

above were used for this purpose, taking n_s as the number of surveyed FSUs of the respective subsample.

2.2.7 Combined estimate: The ‘combined’ estimates for the rural or urban sector of a state/u.t. (or national level estimate) were obtained as the simple averages of the subsamplewise estimates for the respective sectors. All the estimates presented in this report are based on the combined estimates of the aggregates, unless otherwise specified.

2.2.8 Estimates of ratios: Let X and Y be the respective totals of two characteristics \mathbf{x} and \mathbf{y} at the state/u.t./national level. Thus the estimate of ratio $R = Y/X$ is obtained as

$$\bar{R} = \frac{\bar{Y}^2}{\bar{X}^2} \quad \text{where} \quad \bar{X}^2$$

and \bar{Y}^2 are the estimates of X and Y respectively. Both the subsample and the combined estimates of ratios were obtained in this way.

Chapter 3

SUMMARY OF FINDINGS

1. INTRODUCTION

1.1.1 As stated in Chapter 1, the present report is the second in the series of reports on Debt & Investment Survey, NSS 48th round. While the first report (Report no.419) contained estimates of different items of household assets and also of the total assets and liabilities (cash loans) of the households, the present one gives the estimates of households reporting outstanding debt and the amount of such reported debt classified by various correlates at the state and all-India level in the rural sector. Report no. 421, following this report, shall present such estimates for the urban sector. These estimates are based on the Central sample data only. Total household debt has been discussed in these two reports in terms of cash dues outstanding as on 30.6.91 (as done in Report no. 419). In this chapter an attempt is made to bring out the salient features of indebtedness in the household sector of rural India. Further, for the sake of comparison, a few key estimates are presented also for urban areas.

1.1.2 At the outset, a preliminary discussion is made in Section 2 of the magnitude of the aggregate outstanding debt as on 30.6.91. Next, the incidence of indebtedness is discussed in some detail¹. It is followed by a study on the variation of the average amount of

debt and debt-asset ratio by asset holding classes and nature of credit agency in Section 4. The distribution of outstanding cash dues of households on 30.6.91 by various characteristics like credit agencies, terms and rate of interest of loans, duration of loan, type of loan, type of security and purpose of loan is discussed successively in Sections 5 to 11.

1.1.3 Of these characteristics, credit agencies and terms and rate of interest of loans have been probed into more deeply than the rest, in view of their historical importance regarding the supply side and cost of loans respectively. A detailed discussion is made in Section 5 on loans taken from credit agencies and then, in Section 6, on loans by various schemes of lending for institutional agencies only. Next, in Section 7, the focus of discussion shifts to the terms and rate of interest of loans. Discussion on other characteristics is presented in Sections 8 to 11.

1.1.4 Section 12 explores whether there exists any relationship between the size of outstanding cash dues of a household and the value of assets owned by it. Last, but not the least, the theme of current liabilities is taken up for discussion in Section 13. The aggregate amount of cash liabilities of households, as well as the prevalence and the magnitude of such liabilities are discussed at some length.

2. AGGREGATE OUTSTANDING DEBT

¹ This aspect was dealt with, to an extent, in Report no. 419. It is further studied here by analysing its variation by asset holding and nature of credit agency.

2.1.1 Table 1 shows that the aggregate amount of debt outstanding on 30th June, 1991 reported by the households in the country (rural and urban sectors combined) was estimated at Rs. 37,343 crores. Of the total outstanding debt, the share of rural households was 59 per cent. On the other hand, the urban households, which constituted 26 per cent of all households in the country in 1991² accounted for 41 per cent of the total outstanding debt.

Table 1			
Total amount of outstanding cash dues (on 30.6.91) of households in rural and urban India			
	rural	urban	total
no. of households (mill.)	116	42	158
p.c of households	74	26	100
total amount of debt (Rs. crores)	22,211	15,132	37,343
p.c. of share of debt	59	41	100

2.1.2 Table 2 presents the amount of outstanding debt by *Occupational category* of rural households as on the last date in the month of June in the years 1961, 1971, 1981³ and

² Strictly speaking, the estimates of number of households pertain to a moving reference point, as stated in Section 6 of Chapter 1. However, since all other estimates of this report relate to 30.6.91 for the present round, 1991 is given as the reference point for the estimates of number of households. This convention was followed in the earlier rounds as well.

³ In earlier rounds of AIDIS, 'total household debt' included 'debt in kind' which formed a very small part - less than 3% - of the total debt. To that extent, any exercise in comparison over different rounds of AIDIS suffers, since the figures reported on incidence and level of indebtedness in earlier AIDIS

1991. The table reveals that between the two broad categories of households in the rural sector, namely *cultivators* and *non-cultivators*, as high as 80 % of the total debt reported by rural households (amounting to Rs. 17,668 crores) in 1991 was accounted for by the *cultivator* households, which constituted 66 per cent of rural households (*Figure 1*).

Table 2
Amount of total outstanding debt by occupational category of rural households

occupational category	<i>(Rs. Crores)</i>			
	1961	as on June 30 1971	1981	1991
cultivator	1,670 (85.3)	3,374 (87.68)	5,737 (92.64)	17,668 (79.55)
non-cultivator	286 (14.6)	474 (12.32)	456 (7.36)	4,543 (20.45)
all	1,956 (100)	3,848 (100)	6,193 (100)	22,211 (100)

Source of estimates of 1961,1971: RBI(1977)

& of 1981: NSS Report No.322

Note : Figures in parentheses indicate percentage shares

The remaining 20 per cent of debt (Rs. 4,543 crores) was shared by the different categories of *non-cultivator* households, which formed about 34% of all rural households (See Fig. 1)

2.1.3 Estimates in Table 2 also indicate that the aggregate amount of outstanding debt of rural households has been increasing over the years during the last three decades. After a two-fold increase in the total debt between 1961 and 1971 (from Rs. 1,956 crores to Rs. 3,848 crores), the rise during the 1970s was about one and a half times (from Rs. 3,848 crores to Rs. 6,193 crores). The rise was sharpest -- about three-fold -- in the eighties, the value rising to Rs.22,211 crores in 1991. However,

rounds are strictly not comparable with those of 1991.

due to the rise in the prices of commodities during the intervening period, such upward trend in the aggregate amount of outstanding debt may not -- in real terms -- be of much significance. In fact, while the increase in the value of total assets was proportionately more than the increase in the total debt during the 1970s⁴, both the former and the debt rose about three-fold during the decade ending 1991⁵. It may be noted that the share of *cultivator* households in the total debt had steadily increased over the years till 1981, from 85 per cent in 1961 to 88 per cent in 1971 and as high as 93 per cent in 1981, but it has steeply fallen to about 80% in 1991. The ten-fold rise in the amount of aggregate debt of *non-cultivator* households during the 1980s may be noted in this connection.

2.1.4 Having discussed the magnitude of debt outstanding in the rural household sector, the structure and other related aspects of indebtedness of rural households classified by various correlates are analysed in subsequent paragraphs.

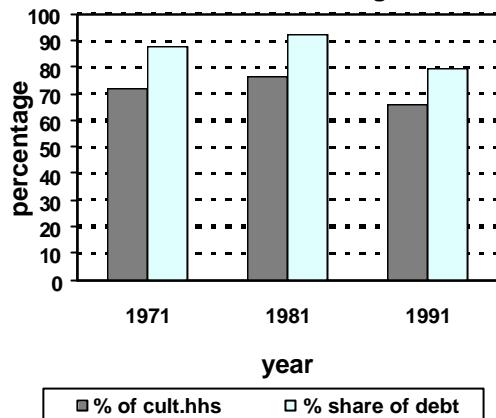

3. PREVALENCE OF INDEBTEDNESS IN 1991

3.1.1 *Indebtedness and household assets holding:* Indebtedness of households, in terms of the percentage of indebted households (IOI) and average amount of debt per household (AOD), was discussed briefly for different occupational categories in Report no. 419. The following paragraph looks into the prevalence of indebtedness among households

⁴ NSS Report No. 318 : *Assets and Liabilities of Rural and Urban Households*.

⁵ NSS Report No. 419 : *Household Assets and Liabilities as on 30.6.91*.

**Share of cultivator households
among rural households and in
debt outstanding**

belonging to different asset holding classes (AHC) in 1991 for rural areas.

Table 3
**Percentage of rural households indebted (IOI) on
30.6.91 to institutional and non-institutional credit
agencies by household assets holding class (AHC)**

AHC (Rs. 000)	IOI to		
	inst. agency	non-inst. agency	any
less than 5	5.3	7.4	11.8
5 - 10	9.8	10.3	19.9
10 - 20	10.7	10.8	20.3
20 - 30	15.5	9.5	24.1
30 - 50	15.3	11.0	24.5
50 - 70	15.8	10.1	23.9
70 - 100	16.8	9.6	24.0
100 - 150	19.4	11.2	26.9
150 - 250	20.2	8.8	25.6
250 & above	25.5	7.9	29.7
all classes	15.6	9.8	23.4

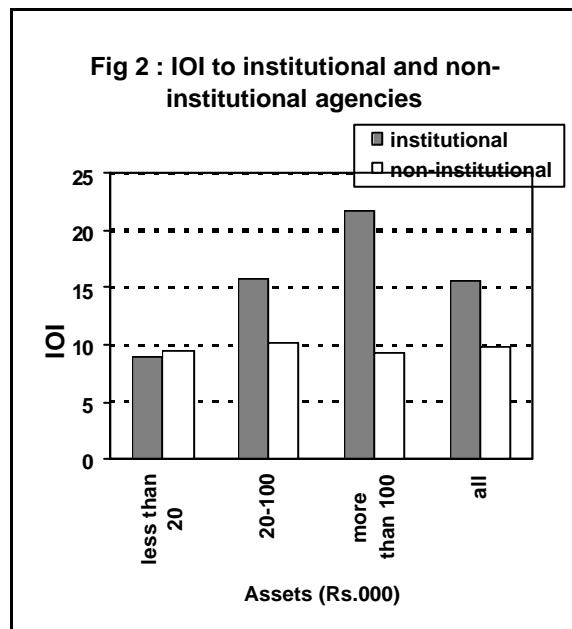

Note: Only effective households have been considered while deriving percentages for the 48th Round. These may, therefore, differ from the estimates given in the Appendix tables. However, the differences are too small to vitiate any pattern or trend. This holds true for all those tables presented in this chapter from which "not recorded" cases have been excluded.

3.1.2 Table 3 shows the percentage of indebted households, by AHC for institutional

and *non-institutional* credit agencies as obtained from the survey. It is seen that IOI increased marginally over the various AHCs, when these classes are arranged in an ascending order of magnitude. However, a marginal drop is noted in a couple of AHCs. A sharp rise in IOI is noticeable from the lowest AHC to the next class -- from 12% to 20%. In all the higher classes barring the highest one, IOI is seen to range between 20% to 27% - pretty close to the overall average of 23%. In the highest class, it is observed to be 30%, which was the highest among all AHCs.

3.2 IOI to Credit Agencies and Assets Holding:

3.2.1 The primacy attached to the study of institutional credit since the days of the first All India Rural Credit Survey in 1951-52 is reason enough to warrant a between-agency-type comparison of variation of IOI by AHCs.

3.2.2 Institutional agencies: Table 3 shows that, in rural areas, as per survey results, the top AHC had a decidedly higher incidence -- about 26% -- of indebtedness to institutional agencies. This is about 5 times the value of IOI in the lowest AHC. In fact, the percentage of households indebted to institutional agencies increases with AHC, when these classes are arranged in an ascending order. The reported figure was below 10% or so for the "poor" households, i.e. those with assets valued at less than Rs. 20 thousand . The IOI was between 15% to 17% for households with asset holding between Rs. 20 thousand to Rs. one lakh. However, the survey results show that about a fifth or more of the "rich" households, i.e. those with assets worth Rs. 1 lakh or more, were indebted to institutional agencies in 1991.(See Fig.2)

3.2.3 Non-institutional agencies: Table 3 does not show a definite rising or declining pattern in IOI by AHCs. Unlike institutional loans, IOI to *non-institutional* agencies was of the same order (about 7%) for the lowest and highest AHCs. The IOI, which fluctuated as one moves from the lowest to the highest AHCs, varied within a narrow band of 7% to 11% over the entire range of AHCs. Thus, there is no discernible pattern with respect to household asset holding as regards the percentage of households reporting indebtedness to non-institutional agencies (see Figure 2) .

3.3 Statelevel Variation in IOI by Nature of Credit agency

3.3.1 A brief discussion on the incidence of indebtedness (IOI) and its variation among states has already been included in Report 419. However, before proceeding to analyse the distribution of the magnitude of outstanding debt by credit agency, it is worthwhile to look into the spread of indebtedness by different agencies from Table 4.

3.3.2 In rural India as a whole, the results of the survey showed that institutional agencies had financed the debt of one out of every six households, much more than that of the *non-institutional* agencies which had advanced credit to only one out of ten households. Considering all agencies together, an estimated 23% (less than one out of four households) of the rural households had reported indebtedness in 1991.

3.3.3 *Inter-state variation:* Indebtedness was reported to be more widespread in Andhra Pradesh, Kerala, Rajasthan and Tamil Nadu than in the other states. In these states, the value of IOI exceeded 30%. In all these states, except Kerala, IOI to *non-institutional* agencies varied in the range of 19% to 22%, while the all-India figure was only 9.8%. The IOI to institutional agencies in these states was close to the all-India average of 15.6%. Kerala, however, is an exception in this group, with IOI for institutional agencies showing a high figure of 28.3% -- the highest among all the 17 major states presented in Table 4. Other states reporting high IOI (about 20% or more) to institutional agencies are Karnataka, Haryana (each 22%), West Bengal (21%) and

Maharashtra(20%). For *non-institutional* agencies, almost all the states other than Andhra Pradesh, Rajasthan and Tamil Nadu reported IOI value either close to or much lower than 9.8%, the national average for rural areas.

Table 4

Incidence of indebtedness (IOI) to *institutional* and *non-institutional* agencies for 17 major states on 30.6.91

states	<i>Rural</i>		
	inst. agency	non-inst. agency	any
Andhra Pradesh	16.5	21.8	34.6
Assam	3.0	3.2	6.2
Bihar	9.4	7.1	16.2
Gujarat	12.0	5.3	16.5
Haryana	21.6	10.1	27.7
Himachal Pradesh	13.0	9.9	21.5
Jammu & Kashmir	8.5	6.2	14.0
Karnataka	22.0	7.1	28.1
Kerala	28.3	6.4	30.7
Madhya Pradesh	15.1	7.0	20.8
Maharashtra	19.5	5.4	22.4
Orissa	18.5	6.2	23.3
Punjab	18.1	10.2	25.1
Rajasthan	13.8	18.5	30.2
Tamil Nadu	16.7	18.7	29.6
Uttar Pradesh	12.5	7.7	18.9
West Bengal	20.6	7.6	26.3
India	15.6	9.8	23.4

4. AMOUNT OF DEBT AND DEBT-ASSET RATIO

4.1.1 The average amount of debt per household (AOD) and debt-asset ratio (hereafter referred to as DAR) by occupational categories of households were discussed briefly in Report no. 419. This section deals with two allied questions involving relationship between assets and debt of a household. They are:

1. How does DAR behave for households belonging to different asset holding classes?
2. Does the behaviour of DAR differ for loans from institutional agencies and those from *non-institutional* agencies ?

4.2 Variation of DAR over AHCs :

4.2.1 Table 5 provides an answer to the first of the two questions raised above. The AOD and the average amount of total assets per household (AVA) for each AHC are given therein.

4.2.2 Table 5 shows that for rural areas, on 30.6.91, although the households in the higher asset classes usually reported a higher average debt, they, in general, had to bear a lower debt burden. The debt-asset ratio steadily decreased with a rise in asset class. In other words, the households with low-valued assets, i.e. the poorer households, had to carry, relatively speaking, a heavier burden of debt compared to the households with high-valued assets i.e. the richer households.

Table 5

Average amount of debt (AOD) and debt-asset ratio(DAR) by household assets holding class (AHC) on 30.6.91

asset holding class	AVA (Rs. 000)	AOD			debt-asset ratio			Rural
		institutional	non-institutional	all	institutional	non-institutional	all	
less than 5	2,495	148	201	351	5.93	8.06	14.09	
5 - 10	7,554	303	346	677	4.01	4.58	8.97	
10 - 20	14,649	357	460	886	2.44	3.14	6.05	
20 - 30	24,730	615	284	951	2.49	1.15	3.84	
30 - 50	39,364	678	548	1,261	1.72	1.39	3.20	
50 - 70	59,342	897	779	1,724	1.51	1.31	2.91	
70 - 100	83,945	960	619	1,656	1.14	0.74	1.97	
100 - 150	122,384	1,374	887	2,390	1.12	0.72	1.95	
150 - 250	192,459	1,643	790	2,532	0.85	0.41	1.32	
250 & above	544,091	5,344	1,223	6,647	0.98	0.22	1.22	
all classes	107,007	1,221	624	1,906	1.14	0.58	1.78	

Note : 1. AOD from institutional and non- institutional do not add up to 'all' AOD as for some loans credit agency is not specified.

2. AVA stands for average value of assets.

4.3 Variation of DAR by AHCs and by nature of credit agency

4.3.1 An attempt is now made to answer the second question raised earlier in this section. Table 5, which shows the values of AOD and DAR separately by the type of credit agencies involved: institutional and *non-institutional*, is used to arrive at the answer.

4.3.2 *Institutional debts:* Table 5 shows that both the variables, AVA and average amount of institutional debt (AODI) systematically increased with AHC, though the rise between two successive AHCs for both these variables is seen to be the highest from the lowest AHC to the AHC Rs. 5,000 to 10,000 and the penultimate AHC to the top AHC. The variable DARI, i.e. the ratio of institutional debt to assets, also shows a similar pattern of decreasing values with an increase in asset holdings for most of the AHCs.

4.3.3 *Non-institutional debts:* The DAR of households reporting loans from *non-institutional* agencies closely resembled the pattern for the loans from institutional agencies, the inter-AHC variation in average amount of *non-institutional* debt (AODN) shows an entirely different character. Values of AODN decreased over successive AHCs on three occasions and the difference in its value at the two extremes was much less spectacular than those shown by AODI. However, in terms of debt burden by AHCs, the message of Table 5 is quite clear: the poorest households (at the lowest AHC) and the richest (top AHC) stand in stark contrast. For the poorest households, values of DARI and DARN were quite high : 5.93% and 8.06% respectively, which were substantially larger than the corresponding values of 0.98% and 0.22% for the richest

households. Thus, the richest households were saddled with far less debt burden than the poorest, irrespective of the type of credit agency from where the loan was availed of. However, when the agency was of a *non-institutional* nature, this burden is found to be lighter (0.22%) for the richest but heavier (8.06%) for the poorest.

5. INSTITUTIONAL CREDIT IN TOTAL CASH DEBT

5.1.1 In view of the fact that the institutional credit agencies have an impact on the cost of borrowing, an attempt is made to examine the role of institutional and *non-institutional* agencies in providing loans to different segments of households in the rural sector.

5.2 Change in share of institutional credit in total cash debt

5.2.1 For long, the household sector, particularly in rural India, was exploited by the traditional credit agencies like agricultural money lender, professional money lender, landlords, traders etc. It seems that their stranglehold which was gradually loosening during the 1960s, was very nearly broken during the 1970s, with the institutional agencies making steady inroads into the rural scene.

5.2.2 *In rural India:* Table 6 shows that the share of institutional credit agencies in the outstanding cash dues of the rural households at the all-India level increased from 17% in 1961 to 29% in 1971 and then leapt to 61% in 1981. During the following decade, the share rose by just about 5 percentage points and stood at 64% in 1991.

Table 6

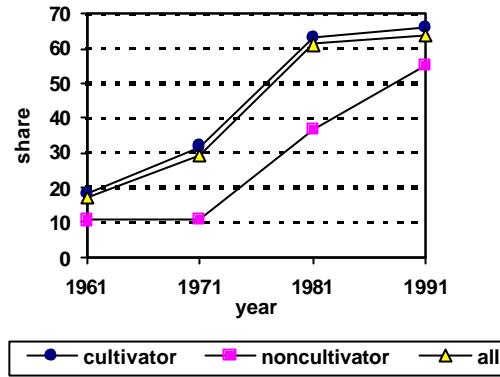

Percentage share of institutional agencies in outstanding cash debt of rural households for occupational categories in 1961,1971,1981 and 1991

year	occupational category		
	cultivator	non-cultivator	all
1961	18.4	10.5	17.3
1971	31.7	10.8	29.2
1981	63.2	36.7	61.2
1991	66.3	55.3	64.0

source : As for Table 2

5.2.3 *By occupational categories:* Fig 3 depicts a sharp rise in the share of institutional credit agencies between 1961 and 1971 in the case of *cultivator* households only, with no visible change among the *non-cultivator* households. However, during the decade ending 1981, there had been a two-fold increase (from 32% to 63%) in the share of institutional credit agencies in the case of *cultivators*, while for the *non-cultivators*, the percentage -- rise was even steeper -- more than three times (from 11% to 37%). In the decade ending 1991, the increasing trend in the share of institutional agencies continued but the pace of increase was arrested, with the rise being less than 3 percentage points for *cultivators* and about 18 percentage points for *non-cultivators*. (See Figure 3)

Fig 3:Rising share of institutional agencies in total outstanding cash dues of rural households

5.3 State-level changes during 1971 to 1991

5.3.1 The share of institutional and *non-institutional* debt contracted by rural households in major states is presented in Table 7. The estimates indicate that of the total outstanding cash dues (TCD in brief), the share of institutional agencies had increased marginally during the 1980s in most of the states, after having increased substantially during the 1970s. However, the role of the institutional agencies, as judged from their share in the outstanding cash dues, varied from state to state.

5.3.2 *State-specific variation in 1981:* A snapshot of this variation in 1981 showed that institutional credit agencies accounted for more than three-fourths of the TCD in Maharashtra (86%), Orissa (81%), Kerala (79%), Karnataka (78%) and Haryana (76%). In contrast, not even 50% of the debt was contracted through the institutional credit agencies in Assam (31%), Andhra Pradesh (41%), Rajasthan (41%), Jammu & Kashmir (44%), Tamil Nadu (44%) and Bihar (47%).

Table 7

Percentage share of institutional agencies in outstanding cash debt of rural households in 17 major states in 1971,1981 and 1991

state	1971	1981	1991
Andhra Pradesh	13.7	40.9	34.0
Assam	34.7	30.6	66.0
Bihar	10.7	47.2	73.0
Gujarat	46.9	70.0	75.0
Haryana	26.4	75.8	73.0
Himachal Pradesh	23.9	74.5	62.0
Jammu & Kashmir	20.4	43.5	76.0
Karnataka	29.7	78.2	78.0
Kerala	44.4	78.6	92.0
Madhya Pradesh	31.6	66.3	73.0
Maharashtra	67.4	86.4	82.0
Orissa	30.0	81.0	80.0
Punjab	36.0	74.2	79.0
Rajasthan	9.4	40.9	40.0
Tamil Nadu	22.1	44.3	58.0
Uttar Pradesh	23.4	55.1	69.0
West Bengal	30.6	65.5	82.0
India	29.2	61.2	66.0

Source : As for Table 2

Note : As given under Table 3

5.3.3 Changes during 1980s : By 1991, the picture had changed in some of the 17 major states (see Table 7). Of the 17 states, 5 have shown a fall in the share of institutional agencies, notable among whom are Himachal Pradesh and Andhra Pradesh, where the fall in percentage share from 1981 values had been to the tune of 12 and 6 percentage points respectively. With this fall, Andhra Pradesh, with a share of institutional agencies of just 34%, joins league with Rajasthan as being the only two states where share of such agencies was less than 50%. On the other hand, the other 12 major states had registered a rise in the share, which, barring a few with marginal to

moderate rise, can be described as sharp to spectacular.

5.3.4 In Assam, Jammu & Kashmir and Bihar, the share has shot up by 35, 33 & 26 percentage points respectively. In West Bengal, Tamil Nadu, Uttar Pradesh and Kerala, the rise has exceeded 13 percentage points. With this rise, institutional loans accounted for about 92% of the reported debt in rural Kerala, virtually wiping out the *non-institutional* agencies from there. In all the other states except Kerala, where the share of institutional loans had risen to about 80% in 1981, viz. Haryana , Orissa , Karnataka and Maharashtra , the shares in 1991 hovered close to the 1981 values. Except in Andhra Pradesh(34%), Rajasthan (40%), Tamil Nadu(58%) and Himachal Pradesh(62%), the share of institutions is about three-fourths or more.

5.4 Share of institutional agencies by AHC

5.4.1 The institutional credit agencies play an important role in meeting the need of credit of the households on easy terms of contract and thus reduce the burden of heavy interest that the households would otherwise be compelled to bear. Unfortunately, their dominance appears to be the least among those who, probably, need their service most.

5.4.2 Table 8, which gives the percentage shares of the amount of debt contracted from institutional and *non-institutional* credit agencies for each AHC at all-India level, reveals that the households of the lower asset groups were more dependent on the *non-institutional* credit agencies. The share of debt from the institutional credit agencies was 42 per cent in the case of lowest asset group of "less than Rs. 5,000" as against a high 81 per cent in the

highest asset group of "Rs. 2.5 lakhs and above".

Table 8
Share of Institutional agencies in total cash dues outstanding on 30.6.91 of rural households by asset holding class

household assets holding (AHC) (Rs.000)	institutional agency	non-inst. agency	all
less than 5	42	58	100
5 - 10	47	53	100
10 - 20	44	56	100
20 - 30	68	32	100
30 - 50	55	45	100
50 - 70	53	47	100
70 - 100	61	39	100
100 - 150	61	39	100
150 - 250	68	32	100
250 & above	81	19	100
all classes	66	34	100

Note : As given under Table 3

5.5 Relative position of different credit agencies

5.5.1 Table 9 shows the percentage distribution of total outstanding cash dues of rural and urban households by credit agencies within the institutional and *non-institutional* types as obtained from the survey. It is observed from the table that, at the all India level, among the institutional credit agencies, the co-operative societies and the commercial banks were the two most important agencies both in the rural and urban sectors.

Table 9

Percentage share of different credit agencies in cash dues outstanding on 30.6.91 of rural and urban households

credit agency	rural	urban
1. government etc.	6.1	11.1
2 .co-operative societies	21.6	17.2
3. commercial banks etc.	33.7	21.6
4. insurance	0.3	1.4
5. provident fund	0.7	3.3
6. other institutional	1.6	15.5
All institutional agencies	64.0	70.0
7. land lord	4.0	0.6
8. agri. money lender	7.0	1.2
9. prof. money lender	10.5	9.0
10. relatives & friends	5.5	9.6
11. others including doctors.,traders etc	5.7	6.4
All non- instit. agencies	32.7	26.8
unspecified	3.3	3.2
All agencies	100	100

5.5.2 *Institutional agencies*: In rural areas, these two agencies together accounted for 56 per cent of the outstanding cash debt, with Banks (34%) accounting for a greater share than the societies (22%). However, only 39 per cent of the TCD in urban areas was loaned from co-operative societies and commercial banks, their respective shares being 17 and 22 per cent. Among the specified institutional agencies, the government departments came next in the urban sector, accounting for 11 per cent of the outstanding cash dues, as against 6 per cent in the rural sector. The share of 'other institutional' agencies was quite substantial (15.5%) in urban areas, presumably due to large-sized household loans from various financial institutions for purpose of house-building/renovation or acquiring high-valued household durable goods.

Table 10

Percentage distribution of outstanding cash dues of cultivator households by credit agencies in 1971, 1981 and 1991

credit agency	Rural		
	1971	1981	1991
1. government etc.	7.1	3.9	5.7
2. co-operative societies	22.0	29.9	23.6
3. commercial banks etc.	2.4	28.9	35.2
4. insurance	0.1	0.3	0.2
5. provident fund	0.1	0.2	0.5
6. All institutional agencies	31.7	63.2	66.3
7. land lord	8.1	3.6	3.7
8. agri. money lender	23.0	8.3	6.8
9. prof money lender	13.1	7.8	10.7
10. traders	8.4	3.2	2.2
11. relatives & friends	13.1	8.7	4.6
12. others	2.6	5.2	2.6
All non-institutional agencies	68.3	36.8	30.6
All agencies	100.0	100.0	100.0

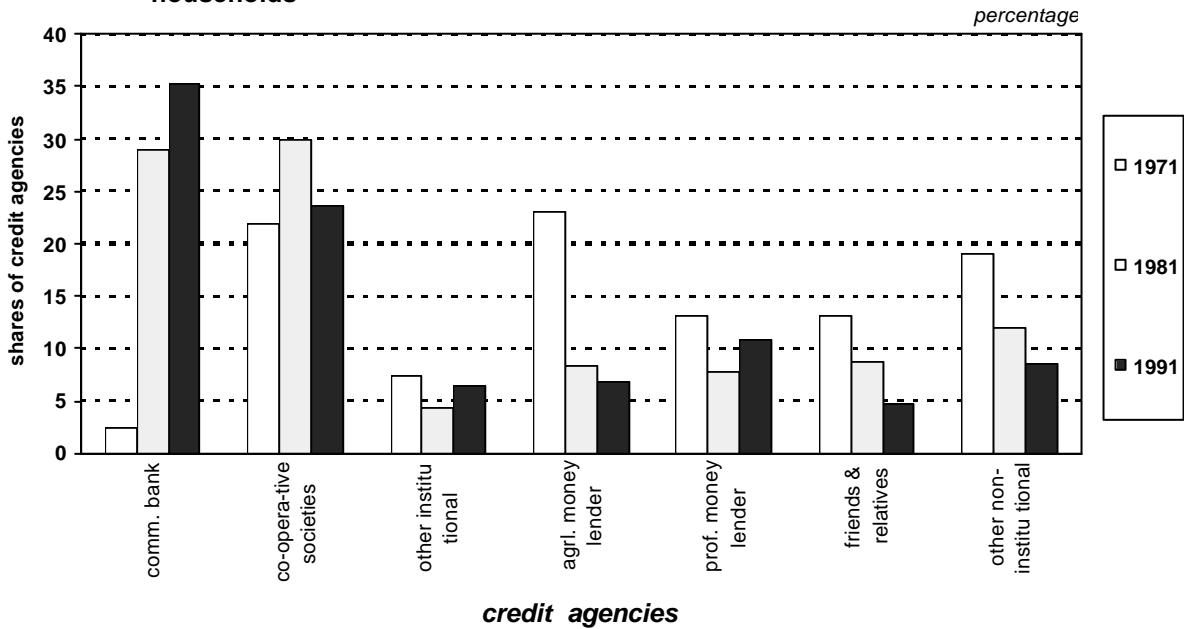

Source of Estimates: As for Table 7

5.5.3 Non-institutional agencies: Among the non-institutional credit agencies, money lenders -- both professional and agricultural -- in that order, were found to be important sources of finance in rural areas, their respective shares being 10.5 per cent and 7 per cent. The share of relatives and friends was 5.5 percent of the cash dues of rural households. In urban areas, relatives and friends with a share of 9.6 per cent, was the most important non-institutional credit agency, followed by professional money lenders (9%) and agricultural money lenders (1%).

5.6 Changing role of credit agencies

5.6.1 To assess the changes in the relative position of the different credit agencies over the years, the results of NSS 48th (1991), 37th

Figure 4
Changing shares of credit agencies in outstanding cash dues of rural households

(1981) and 26th (1971) rounds are presented in Table 10 for the *cultivator* households in the rural sector at all-India level.

5.6.2 Institutional agencies: As is evident from the table, the most remarkable performance was that of the commercial banks etc. While the share of co-operative societies in the outstanding cash dues of cultivator households increased from 22% in 1971 to 30% in 1981 only to drop to 24% in 1991, that of commercial banks rose to 35% in 1991, after rising sharply to 29% in 1981 from a meagre 2% in 1971. It appears that the large number of branches that were set up by various commercial banks in 1970s and the subsequent introduction of rural banking schemes have driven the commercial banks to assume the role of principal credit agency in rural areas. It may be of interest to note that the share of government departments in the outstanding cash dues of cultivator households, after showing a decline from 7% in 1971 to 4% in 1981, again rose to 6% in 1991. (See Fig.4)

5.6.3 Non-institutional agencies: The combined share of all the *non-institutional* credit agencies in the outstanding cash dues of cultivator households recorded a sharp decline of more than 30 percentage points during 1970s but the decline got arrested in the 1980s -- the fall being just of about 6 percentage points. The decline is found to be the steepest for the credit agency "agricultural money lenders", whose share came down to 7% in 1991 from about 8 per cent in 1981 and 23 per cent in 1971. However, the share of "professional money lenders" has reported a rise to about 11% in 1991, after registering a fall to 8% in 1981 from about 13% in 1971. Relatives and friends appear to be gradually losing their importance as source of credit. From 13% in 1971, their share fell to 9% in

1981 , and dipped further down to 5% in 1991. (see Fig.4)

6. SCHEMES OF LENDING

6.1.1 The discussion in the preceding section clearly brings out the predominance of institutional agencies over *non-institutional* ones in terms of loans advanced to Indian households in general. It could now be of interest to study how these cash loans were advanced by the Institutional agencies (IAG) to households. To this end, distribution of cash dues of rural households which arose from cash loans given by IAGs against various schemes of lending in 1991 is examined in detail in the subsequent paragraphs.

6.1.2 A first look into Tables 7R of the Appendix suggests that the percentage share of household cash dues arising out of loans advanced by IAGs under a number of individual schemes do not show any appreciable value. Thus, for a sharper presentation, such schemes have been merged into some of the other significant categories in Table 11.

6.2.1 Groupings of lending schemes: In 1991, in rural India as a whole, it is seen that certain specific programmes/schemes such as 'Employment Generation schemes', 'advances to minorities' and various 'self-employment' schemes had not become significant means of disbursal of loans to households. As per the convention stated above, the three schemes for 'self-employment' have been merged to form a single group termed 'SELF-EMP' in Table 11. 'EGS' and 'advances to minority' have been clubbed together into a category 'other schemes'. The individual percentage shares of 'EGS' and 'advances to minority' was less than

Table 11

Percentage distribution of dues outstanding on 30.6.91 of rural households by scheme of lending in 17 major states

State	scheme of lending					all
	IRDP	DRI	self-emp.	other	unspecified

Tamil Nadu	19.6	1.2	7.4	46.4	25.4	100
Uttar Pradesh	33.4	0.6	3.0	33.2	29.8	100
West Bengal	37.3	2.4	6.5	39.9	13.9	100
All-India	23.1	1.4	5.2	44.0	26.3	100

1% at the national level. (see Table 7R in the Appendix).

6.2.2 In rural India: The survey results as presented in Table 11 suggests that in rural India, a majority of loans disbursed by IAGs were not given under the well-defined schemes such as DRI, or "self-employment programmes" but under "other schemes" or even in the category "not covered under any scheme." About 44% and 26% of the TCD in 1991 arising from loans advanced by IAGs to rural households was accounted by "other schemes" or was "not covered under any scheme" respectively. Out of the balance share of 30%,

about three-fourths was accounted for by IRDP, and roughly a sixth by the "self-employment" group.

6.3.1 Inter-state variation: In some states like Uttar Pradesh, West Bengal, Madhya Pradesh, Haryana, Assam and Bihar, the share of IRDP ranges from 30% to 37% which is significantly above the national level average of about 23%. However, in some other states like Kerala, Punjab and Jammu & Kashmir, this share was very low-- merely 8% to 9%. The share of IRDP was also quite low in a few other states such as Himachal Pradesh and Andhra Pradesh about 12% to 14%.

7. PAYMENT OF INTEREST

7.1.1 To get an idea of the interest burden to be borne by the indebted households, two factors need to be seen in conjunction. These are: first, the terms of payment of interest and secondly, the actual rate of interest (henceforth referred to as ROI, in brief).

7.1.2 Loans on different terms of payment of interest are categorised by terms of interest (referred to briefly as TOI subsequently) charged on loans incurred by them. There are four such categories : first, interest free, secondly, concessional rate of interest, thirdly, simple interest and finally, compound interest. Obviously, to understand the burden of interest, the actual ROI should also be examined along with the TOI of the loan, since the actual interest amount due from a household would differ according to interest terms.

7.1.3 However, the percentage share of the quantum of cash debt is first studied over different categories of TOI. The scope of the study is subsequently extended to address to the aspect of varying interest rates.

7.2.1 *Categories of TOI:* Table 12 shows that on 30.6.91, the percentage share of the aggregate amount of debt (to be referred ,in brief, as PSAOD henceforth) for the category "concessional" was the least - a paltry 4%. The corresponding PSAOD for the category "interest free loans" was quite significant at 9%. Sharesof debt incurred for loans taken on "simple interest" and "compound interest" were 66% and 22% respectively.

Note : As given under Table 3

7.3 Changes during 1980s

7.3.1 Table 12 shows the percentage distribution of amount of cash debt by TOI for the rural areas in 1981 and 1991. Compared to 30.6.81,a much higher share of debt had to be serviced at a "compound rate" of interest on 30.6.91. The PSAOD for this category of TOI has nearly doubled to about 22% on 30.6.91 from a figure of 11% on 30.6.81. For the category "concessional", too, the PSAOD is observed to have risen from a low 2% in 1981 to about 4% in 1991. However, PSAOD obtained "interest free" is seen to have decreased marginally from 12% in 1981 to about 9% in 1991. Similar is the case for loans taken on "simple interest"; PSAOD obtained on simple interest marginally declined from 69% in 1981 to 66% in 1991.

7.4 Terms of Interest

7.4.1 Inter-state variation in PSAOD by TOI: Based on the survey data,a study has been made on the inter-state variation of the PSAOD by TOI for cash debt outstanding on 30.6.91 of rural households. The study shows some interesting results. Rather wide inter-state differences are observed the 4 categories of TOI. It is seen from Table 13 that more than a third of the entire amount of debt contracted by rural households of Assam and Himachal Pradesh was free of interest, with the PSAOD being high also in a few other states like Jammu & Kashmir(27%) and Gujarat(22%). In contrast, the shares of interest free debt are seen to be quite low - only 3% for some other states like Andhra Pradesh, Haryana and Rajasthan.

Table 13
**Percentage distribution of amount of cash debt on 30.6.91
by terms of interest for 17 major states**

state	terms of interest					Rural
	int.fre e	simple	comp- ound	conces- sional	all	
Andhra Pradesh	3.2	86.1	9.3	1.3	100	
Assam	42.3	45.4	8.8	3.6	100	
Bihar	10.6	35.5	43.1	10.7	100	
Gujarat	21.8	61.6	11.6	5.0	100	
Haryana	3.0	80.4	15.5	1.0	100	
Himachal Pradesh	33. 8	40.8	18.0	7.3	100	
Jammu & Kashmir	27. 1	21.3	50.5	1.1	100	
Karnataka	5.9	68.9	20.5	4.6	100	
Kerala	5.3	42.2	38.0	14.5	100	
Madhya Pradesh	2.7	65.2	25.4	6.6	100	
Maharashtra	12.9	62.6	19.5	5.1	100	
Orissa	5.0	67.7	25.9	1.4	100	
Punjab	8.1	59.2	31.8	0.9	100	
Rajasthan	3.6	76.4	18.8	1.2	100	
Tamil Nadu	13.0	73.0	13.6	0.4	100	
Uttar Pradesh	12.6	56.9	25.7	4.8	100	
West Bengal	13.3	43.4	37.5	5.9	100	
India	9.0	65.9	22.1	4.2	100	

Note :As given under Table 3

7.4.2 It is observed that more than 10% of the aggregate outstanding debt of households of Kerala and Bihar was obtained at a "concessional rate" of interest. On the other hand , a relatively very small share of debt was contracted on concessional terms by households of Tamil Nadu and the value of PSAOD was just 1% for states such as Punjab, Haryana and Jammu & Kashmir.

7.4.3 Contracting loans at a simple rate of interest appears to be the most prevalent practice in most states, with the exception of a few like Jammu & Kashmir and Bihar. In these two states, of the total debt outstanding on 30.6.91, only about a fifth and a third respectively were obtained on simple interest. The share (PSAOD) taken on "simple interest", was found to be about two-fifths for some states like Himachal Pradesh, Kerala and West Bengal. However, such PSAOD figures were distinctly high in states like Andhra Pradesh, Haryana and Rajasthan, which reported values of 86%, 80% and 76% respectively.

7.4.4 Share of debt contracted at compound ROI varied significantly between a low 9% to a high 51% over the different major states. States such as Jammu & Kashmir, Bihar, Kerala and West Bengal reported high PSAOD values which stood at 51%, 43%, 38% and 38% respectively. On the other side, states like Assam, Andhra Pradesh and Gujarat reported far lower figures of PSAOD at 9%, 9% and 12% respectively given on compound interest..

7.5 Differing rates by terms of interest

7.5.1 Variation over ROIs for different TOI:

As stated earlier, the quantum of interest to be paid by indebted households depends on both the TOI and the actual rate of interest (ROI) at which the loans are contracted. However, by definition, "interest free" loans get excluded from the ambit of this extended study. Further, for "concessional" loans, the figures of PSAOD to the overall quantum of outstanding debt is found to be very low on 30.6.91 for virtually all the states. Thus, not much insight is likely to be gained from further disaggregation of these loans by different rates of interest. Hence, only such debt as was incurred for loans contracted at simple or compound rates of interest have been further disaggregated by ROI categories.

7.5.2 For the purpose of better presentation, some of the classes of ROI given in detailed Tables 3 and 4 in the Appendix have been merged as follows for the category "simple interest" loans. All cases of ROI less than 15% have been merged in one ROI category called SL, with all ROIs exceeding 15% being shown under a second ROI category named SH. For TOI category "compound interest", three ROI categories have been formed. The first ROI category, called CL, cover those cases for which ROI is less than 10%. The second ROI category, named CM captures all those loans whose ROI is equal to or more than 10% but less than 15% while the third ROI category called CH relates to loans with ROI exceeding 15%. Since a higher amount of interest had to be paid by households for loans bearing "compound interest", one more ROI category was made by splitting the range of ROI '0% to 15%' in two parts. Table 14 presents the percentage distribution of debt outstanding on 30.6.91 by these ROI-TOI categories. It may be noted that CH and CM represent two categories of loans which are relatively more costly to service.

7.6 Different rates of simple interest

7.6.1 Table 14 shows that, at the national level, aggregate quantum of debt contracted by rural households at a "simple interest" seems to be roughly equally distributed among loans contracted at a rate of 15% or more and less than 15%.

7.6.2 Inter-State variations: However, the picture emerging from the statelevel figures shown in Table 14 appears to depict a different picture. At the state level, such equal distribution of total debt contracted at relatively higher (SH) or lower (SL) category occurs only in Maharashtra. In no other major state, the percentage shares of the two categories are found to be close enough. The difference in the PSAOD between these two categories is highly pronounced - more than 25% - in certain states like Andhra Pradesh, Haryana, Rajasthan and West Bengal. This difference also exceeds 20% in a few other states like Orissa, Madhya Pradesh and Himachal Pradesh.

7.6.3 When the above statelevel variations in the difference of PSAOD between the two ROI categories of "simple interest" are viewed along with the findings (stated earlier in para 7.4.3) for the TOI category "simple interest" as a whole, some interesting aspects come to light. First, the 3 states showing the highest shares for TOI category "simple interest" are found to be the ones for which the difference between the two ROI categories of "simple interest" is the most remarkable. Secondly, relative preponderance of the ROI category SL compared to the other category SH could be found in most of the states. The exceptional states were Andhra Pradesh, Rajasthan and Tamil Nadu, whose figures of PSAOD at

Table 14

State	int.free	SL	SH	CL	CM	CH	con-cess.	Rural all
Andhra Pradesh	3.2	18.8	67.3	0.6	2.1	6.6	1.3	100
Assam	42.3	29.8	15.6	1.3	4.0	3.5	3.6	100
Bihar	10.6	27.1	8.4	0.6	28.9	13.6	10.7	100
Gujarat	21.8	35.6	26.0	0.3	7.4	3.9	5.0	100
Haryana	3.0	53.1	27.3	1.2	10.8	3.5	1.0	100
Himachal Pradesh	33.8	30.6	10.2	1.4	8.2	8.4	7.3	100
Jammu & Kashmir	27.1	18.8	2.5	0.4	9.2	40.9	1.1	100
Karnataka	5.9	41.5	27.4	0.1	14.1	6.3	4.6	100
Kerala	5.3	26.1	16.1	1.4	19.9	16.7	14.5	100
Madhya Pradesh	2.7	42.7	22.5	5.2	8.6	11.6	6.6	100
Maharashtra	12.9	32.4	30.2	0.1	5.1	14.3	5.1	100
Orissa	5.0	45.7	22.0	0.0	24.7	1.2	1.4	100
Punjab	8.1	35.6	23.6	0.3	28.2	3.3	0.9	100
Rajasthan	3.6	24.0	52.4	0.1	3.1	15.6	1.2	100
Tamil Nadu	13.0	28.3	44.7	0.2	3.9	9.5	0.4	100
Uttar Pradesh	12.6	36.1	20.8	1.2	19.8	4.7	4.8	100
West Bengal	13.3	35.0	8.4	1.5	22.6	13.4	5.9	100
India	9.0	32.7	33.2	1.0	11.7	9.4	4.2	100

Note : As given under Table 3

67%, 52% and 45% respectively, are found to be noticeably higher for the TOI category SH. Thus, among the 3 states showing the highest share for the TOI category "simple", a major amount of the loans for two of them was accepted at a relatively higher rate of interest.

7.6.4 Last, but not the least, Tables 13 and 14 show that in the states reporting a lower share of debt taken on "simple interest", the share of debt taken on high interest rates was also relatively low. The concerned states are Bihar, Himachal Pradesh, Jammu & Kashmir and Kerala. In these states, share of debt taken on SL, though less than the national average (33%), ranged between 19% to 31%. They were not phenomenally low like 3% (for Jammu

& Kashmir) or 8% (for Bihar) as observed for the corresponding shares under the ROI category SH.

7.7 Different rates of compound interest

7.7.1 For the TOI category "compound interest", at the national level, aggregate volume of debt contracted at a relatively low rate - less than 10% - of interest, is found to be minimal. The share of this ROI category, viz. CL, was a paltry 1%. Thus, a major part of debt outstanding on 30.6.91 and contracted at a compound rate was reported at a ROI of 10% to 15% or more than 15%. Between these two categories, share of outstanding debt was

slightly more (12%) for the ROI category CH than that (9%) for the category CM.

7.7.2 *Inter-State variations* : The statelevel variations among the three ROI categories

broadly followed the national pattern for these categories. It is seen from Table 14 that the category CL had a very low share (of about 1%) in almost all the states. The only exception to this pattern was Madhya Pradesh, which reported a share of 5%. Between the other two categories, CM and CH, 10 out of 17 major states reported a higher percentage share in CM. Of these ten states, Bihar, Orissa, Punjab and West Bengal, each with shares between 23% to 29% represent relatively higher values under this category. Among the 7 states for which share was higher under the category CH than under CM, Jammu & Kashmir showing a very high share of 41% in this category was an exceptional state. Other states showing high share under CM were Rajasthan (16%) and Kerala (17%).

7.7.3 The statelevel variations observed in the preceding analysis may now be seen along with the observations for the NOI category "compound", earlier in para 7.4.4. The pattern emerging is summarised below:

First, the share of the quantum of debt contracted at relatively low rates of interest, viz. less than 10% was hardly worth notice in any state.

Secondly, states with a significantly low share of "compound interest" debt as a whole did not indicate any concentration in any particular ROI category. In such states viz. Andhra, Assam or Gujarat, values of share in either of the two categories of CH or CM are observed to be much below their respective values at the national level.

Finally, for states with a significantly high share for TOI category "compound" also , no concentration in a particular category is observed. In states like Bihar, Punjab, Kerala or West Bengal, share of CM was high, but so was the share of CH high in states like Jammu & Kashmir, Kerala, Bihar, Punjab, Kerala or West Bengal.

8. DURATION OF CASH DUES

8.1.1 *Cash dues according to duration* : An analysis of the cash dues reported as outstanding for varying periods of time for the previous rounds and the present one is attempted in this section. Table 15 gives the percentage distribution of total amount of cash dues(TCD) outstanding on 30th June of 1962, 1971, 1981 and 1991 by duration of debt for rural households.

8.1.2 Table 15 reveals that about three-fourths of the rural TCD outstanding on 30.6.91 had

Table 15
**Percentage distribution of cash dues outstanding
by duration of debt**

duration of debt (no. of years)	Rural			
	1962	1971	1981	1991
below 1	39	37	36	37
1-2	21	23	20	23
2-3	12	17	12	14
3-4	8	9	7	8
4-5	5	4	4	5
5-10	9	10	18	9
10 & above	6	1	2	3
all	100	100	100	100

*Sources of Estimates of 1962 &1971 :RBI (1977), [figs.
rounded off to the nearest integer]
and of 1981 :NSS Report No.322*

*Note: Effective households only have been considered while
deriving the percentages for each year*

been contracted for a relatively short duration. The break-up of this is as follows: 37% for less than 1 year, 23% between 1 to 2 years and 14% between 2 to 3 years. Debt outstanding for each of the other durations was relatively low - 9% or less. Debt outstanding beyond 10 years formed an insignificant share of 3% of the TCD.

8.1.3 It may not be out of place to mention here that an amount might remain outstanding for a long period of time owing to the inability of the households to repay the loan within the stipulated period or a loan might be contracted on a long term basis to be repaid over a number of years.

8.2 Changes during three decades

8.2.1 *1960s:* It is interesting to note the changes in the percentage distribution of cash dues by the duration of debt which took place in rural India during the last three decades as revealed from Table 15. Between 1962 and 1971, the share of the cash dues outstanding for a long period of 10 years and above had declined from 6 per cent in 1962 to little over 1 per cent in 1971. So also the share of dues outstanding for a short period of less than 1 year had come down from 39 per cent to 37 per cent. But the share remained more or less the same for the dues that remained outstanding for a fairly long period of 5-10 years, the percentage being 9 in 1962 as against 10 in 1971. On the other hand, the percentage of the dues outstanding for 1-5 years recorded an

increase during the decade. The trend appeared to be reversed between 1971 and 1981.

8.2.2 *1970s:* In contrast to the change in the pattern of duration of debt during 1962-1971, the proportion of cash dues outstanding exhibited considerable increase from 10 per cent and 1 per cent in 1971 to 18 per cent and 2 per cent in 1981 respectively for the duration slabs of 5-10 years and 10 years & above, while the percentage share registered a decline for the period of 1-5 years during the decade ending 1981.

8.2.3 *1980s:* Table 15 exhibits a broad similarity between 1981 and 1991 as regards the duration-specific percentage shares of TCD. The only worthwhile difference observed is for debts of duration 5-10 yrs., which had a high share of 18% in 1981 but fell substantially to about 10% in 1991.

8.3 Statelevel variation in 1991

8.3.1 Survey data as presented in Table 16 show the percentage distribution of cash dues outstanding on 30.6.91 by duration of debt for the major states. No large variation is observed in Table 16 among the states for most of the duration categories. However, for relatively shorter duration debts, Orissa reported quite low figures compared to the corresponding national figures. Only 22% and 14% of TCD in rural Orissa had

been taken for a duration of less than one year and 1 to 2 years respectively.

8.3.3 Among the other categories of duration, not much state-wise variation is observed for

Table 16

Percentage distribution of cash dues outstanding on 30.6.91 by duration of debt for 17 major states

State	duration of debt (year)							Rural
	1	1-2	2-3	3-4	4-5	5-10	10 & above	all
Andhra Pradesh	42	27	12	6	4	7	2	100
Assam	44	18	15	4	2	15	2	100
Bihar	28	32	16	7	8	8	1	100
Gujarat	36	20	17	9	1	13	5	100
Haryana	33	27	12	9	4	11	4	100
Himachal Pradesh	39	17	16	9	10	7	2	100
Jammu & Kashmir	34	25	11	5	14	10	1	100
Karnataka	33	25	17	8	7	10	1	100
Kerala	33	21	11	13	10	8	4	100
Madhya Pradesh	39	23	12	8	7	9	3	100
Maharashtra	38	19	15	7	10	10	2	100
Orissa	22	14	20	15	5	19	5	100
Punjab	42	26	14	6	4	5	3	100
Rajasthan	28	22	18	8	6	9	9	100
Tamil Nadu	41	25	14	9	2	7	2	100
Uttar Pradesh	48	20	12	7	5	8	1	100
West Bengal	37	25	12	13	3	8	1	100
India	37	23	14	8	5	9	3	100

Note : As given under Table 15

8.3.2 As for the loans of older vintage (exceeding 5 yrs), Orissa and Rajasthan are found to stand out. Orissa reported 19% of its TCD outstanding for debts between 5 to 10 years. This was more than double the reported national figure for this category of debt. Rajasthan also reported a high share (9%) of its TCD outstanding for 10 years or more -- about three times the reported national figure.

loans pending for 2-3 years and 3-4 years. Again, Orissa was the only state to report high share of TCD - about 20% and 15% for durations of 2-3 years and 3-4 years respectively. However, some state-wise variation is observed for debts of duration of 4-5 years.

Jammu & Kashmir, Maharashtra, Himachal Pradesh and Kerala reported 10% or more of their TCD under this category, while Gujarat

and Assam reported this share as only 1% to 2 %.

8.4.1 Variation by AHC: From the survey results presented in Table 17 it seems that duration-specific distribution of TCD was broadly similar for all AHCs. A somewhat uneven pattern is noticeable in the lowest AHC (viz. less the Rs. 5,000) for duration categories 2-3 years and 3-4 years. The percentage is somewhat lower for duration 2-3 years and higher for duration 3-4 years.

9. TYPE OF LOAN

9.1.1 Loan by term : The classification of loans by their type, in fact, refers to the term for which the loans were contracted . All loans contracted for a period of 12 months or less are called "short term" loans. Such loans were taken sometimes against some pledge (of commodity) and sometimes without it. "Medium term" loans were contracted for a duration of one to three years and "long term" loans for a period exceeding three years. Table 18 gives

the percentage of indebted households (P) and average amount outstanding(AOD) by type of loan based on the survey data. Since any household could take loans of different types, the P-values for different types are non-additive. It is seen from this table that a higher proportion of households took longer-term loans and the AOD also rose with the duration of loan.

9.2.1 However, going by the incidence, medium term borrowing appeared to be marginally more prevalent than other types in the rural areas, with nearly 9% of all households opting for them. However, availing of "long term" loans and "short-term non-pledged" loans were almost equally prevalent. With the incidence of such types of loans ranging between 6% to 9%, not much significant difference was found for he IOI between the two occupational categories. However, AOD for *cultivators* was nearly double the corre-

Table 18

Percentage of indebted households (P) and average amount outstanding (A) on 30.6.91 by type of loan

Note: As under Table 18 for 'P' columns

10. TYPE OF SECURITY

10.1 Loans against security:

10.1.1 Type of security against which loans are advanced is an important constraint that often forces the borrowers to take loans at higher rates of interest. Hence a study of this factor becomes an integral feature of any analytical study of indebtedness. Some results relating to types of security on the basis of the survey data are presented in Table 19.

10.1.2 *Incidence:* It is seen from Table 19 that the highest percentage of households that were indebted in 1991 had taken loans against

personal security. The next three important security types were mortgage of immovable property (5%), surety security etc. (2%) and first charge on immovable property (2%). All these percentages should be viewed against the overall percentage of indebted households, viz. 23.4%.

10.1.3 *Percentage share:* The estimates of percentage share(S) of debt against different security types is seen to follow almost the same priority order as that of security types in Table 19. As such, the personal security is seen to account for the highest share (48%) of the TCD while mortgage of immovable property (27%), first charge on immovable property (8%) and surety security (8%) accounted for other high shares of the TCD.

10.2 Type of security and occupation category

10.2.1 Incidence: So far as the pattern of prevalence (P) of different types of security for loans advanced to them was concerned, hardly any difference was seen to exist between the indebted *cultivator* and *non-cultivator* households. However, in terms of the actual values of P, some minor differences were found to exist between the two occupational categories.

10.2.2 Percentage share: The above story is seen to be repeated for the percentage share(s) of debt according to different types of security. Interestingly, however, the percentage share of debt for households taking loans on 'personal security' is found to be distinctly more for *non-cultivators* (61) than for *cultivators* (44).

11. DEBT ACCORDING TO PURPOSE

11.1.1 One of the important aspects of a loan is the purpose for which it is taken. This is because the loans taken and utilised for productive purposes such as capital or current expenditure in household enterprises (agricultural or *non-agricultural*) can be expected to accelerate the economic activity of the households and ultimately promote their economic welfare. Hence if a large number of households have taken loans for productive purposes it is a sign of flourishing economic activity in the society. On the other hand, purposes like meeting household expenditure may be considered as 'unproductive purposes' as the money spent on them neither results in production of goods and services nor brings any economic prosperity to the households. Such loans, if large or frequent, may lead to perpetual debt and misery. Any study of indebtedness, therefore, would be incomplete

without a knowledge of the distribution of debt according to different purposes. The distribution, as obtained from the survey data, is presented in Table 20.

11.2 Purposes of incurring debt in rural and urban areas in 1991

11.2.1 Incidence of indebtedness: Table 20 shows that when all households are considered, 'household expenditure' was the single most important reason for taking loans in both the rural(12.6%) and urban(17.2%) areas. It may be noted that the term 'household expenditure' has been used above in a broad sense as it included expenditure on purchase of residential land, building, construction, renovation of building etc. The other reasons for borrowing money according to their importance were capital expenditure in farm business(2.6%) and "others" in farm business(2.7%) in the rural sector, and capital expenditure in *non-farm* business(1.5%) in the urban sector. It is necessary to mention here that these percentage figures should be assessed in relation to overall percentage of indebted households which was 23.4 in the rural areas and 19.3 in the urban areas.

11.2.2 Percentage share of debt according to purposes: Although fewer loans may be taken for a particular purpose, the average amount of loans may be large enough to affect the importance of that purpose, especially in the allocation of loan funds by the financial institutions. In this respect, the percentage shares of debt by different purposes in the total volume of debt provide a measure of their relative importance. The estimates of these percentage shares (S) for rural and urban sectors have been presented in Table 20.

11.2.3 In rural areas: It is observed that among rural households, debt incurred for purposes of 'other household expenditure' and 'capital expenditure in farm business' accounted for the highest portions of the TCD viz. 33% and 12% respectively, with 'other expenditure on farm business' coming third with a share of 10%. A disquieting feature observed from Table 20 is that a substantial 23% of the outstanding household debt reflected loans whose purpose did not fall under any of the specified categories. Thus, tables presented in this Section viz. Tables 20,21 and 22 are based on all households, including those under the "not recorded" or 'not specified' category.

11.2.4 In urban areas: The situation was somewhat different in the urban sector where 'capital expenditure for residential buildings' and 'other household expenditure', 'capital expenditure in non-farm business' and 'other expenditure in non-farm business' are seen to account for the largest shares, viz. 37.9%, 34.3%, 10.8%, and 6.1% respectively in the total debt incurred by urban households. However, unlike in the rural areas, hardly 1.8% of the TCD in the urban areas in 1991 was accounted for by loans whose purpose did not fall under any of the categories stated in Table 20.

11.3 Shift in debt according to purposes since 1971

11.3.1 In order to study the changes in the distribution of cash debt by purposes during the period 1971 to 1991, the percentage shares of cash dues by different purposes at three points of time, namely 30.6.1971, 30.6.1981 and 30.6.91 in the rural areas, as obtained from the present survey and two earlier ones on

Table 20

Percentage of indebted households (P) and share(S) in total debt on 30.6.91 by purpose

any	23.4	100	19.3	100

Note: As under Table 18 for 'P' columns

AIDIS have been presented in Table 21. The category 'productive purposes' is obtained by merging the capital and current expenditures in farm and non-farm business.

11.3.2 Shares by purpose in 1991: The survey results presented in Table 20 and Appendix 8R suggest that the pattern for *cultivator* households was similar to that of all rural households but for *non-cultivator* households, the largest share belonged to 'other household expenditure' (43%) with other important categories being 'capital expenditure for residential building in household'(11.8%), 'other expenditure in non-farm business' (11.2%) and 'capital expenditure in non-farm business' (9.8%).

11.3.3 Changes during the 1970s and 1980s:
From the survey results, it appears that the most prominent change in rural areas occurred in the share of debt incurred for productive purposes, which fell to 23% in 1991 after having increased considerably from 50% in 1971 to 69% in 1981⁶. This fall is noticed to affect both

household expenditure, whose share increased to 40% in 1991 from 22% in 1981. Further, a considerable amount of total debt - about 23% -- appears to have been incurred for purposes that were not falling under any of the categories described in Table 21. It may be noted that the 3 separate categories for 'household

the occupational categories, although it is more pronounced for *cultivators* - 54% in 1981 to 24% in 1991. This fall appears to stem from a higher portion of debt being incurred to meet

'expenditure' in 1991 have been merged in Table 21 to facilitate comparability with corresponding figures from the earlier rounds.

11.4 Purpose of incurring debt vis-a-vis household assets

11.4.1 There is a general presumption that the poorer households (i.e. households with less value of assets) borrow mostly for unproductive purposes like incurring household expenditure

⁶ *This could possibly be due to a different procedure being followed in the 48th round, from that in the earlier rounds, to record the different purposes for which loans were taken by households. The procedures followed in the 48th, 37th and 26th rounds are stated in 'A note on recording purposes of loan' after this chapter.*

and other similar needs whereas the comparatively richer households (i.e. households with higher valued assets) would borrow mainly for productive purposes like operating and expanding their household enterprises. In order to find out whether the results of the 48th round survey substantiate this view, the percentage share of debt classified by different purposes for households belonging to successive asset holding groups has been presented in Table 22. With the objective of condensing the results and focussing on the major features the first four purposes relating to capital and current expenditures on farm or *non-farm* business have been clubbed together under the term 'productive purposes' while the three purposes under household expenditure have been grouped under 'household' expenditure.

11.4.2 From Table 22, it appears that the survey results tend to confirm the presumption stated above, that is, households of the lower asset groups incurred a relatively small part of their debt for productive purposes. In the rural sector, the percentage share of debt for productive purposes is seen to increase from 11.4% in the bottom asset class (upto Rs. 5,000) to 27% in the top asset class (Rs. 250,000 and above). Further, the percentage share of debt against 'household expenditure' is seen to decrease from about 58% in the bottom AHC to about 23% in the top asset holding class.

12. SIZE OF DEBT BY HOUSEHOLD ASSET HOLDING CLASS

12.1 Size distribution of outstanding cash dues

12.1.1 The average cash dues outstanding per household which was estimated as Rs. 1906

Table 22

419, Sec.6) indicates the general level of indebtedness in the household sector. But the percentage distribution of indebted households and of amounts of cash dues outstanding by the size group of such dues reflects the debt borne by different groups of households.

12.1.2 Tables 13R and 13U in the Appendix show the percentage of households reporting outstanding debt on 30.6.91 as well as the share of such debt over the size group of outstanding dues by household asset holding. Table 23 has been generated from Tables 13R and 13U by considering the size of debt alone for all rural and urban households. Table 23 shows that the percentage of households reporting small-sized debt (upto Rs.5,000) was much higher than that of households taking large debt (Rs.50,000 or more) in both rural and urban areas.

12.1.3 Table 23 further shows that the households reporting debt of small size (up to Rs.5000) accounted for 20% and 7% of the TCD in the rural and urban areas respectively. The corresponding shares of

households reporting debt of large size (Rs. 50,000 or more) were 20% and above 40% in the rural and urban areas respectively. Thus, it follows that the numerically small percentage of households, both in rural and urban areas, which incurred large-sized debts accounted for a substantial share of the TCD - equal to or even more - than that accounted for by the far more numerous households incurring small-sized debts.

12.2 Asset holding and size of debt

12.2.1 In the above table, all the ten size groups for both the variables - size of debt and asset holding of a household - were taken into consideration. However, for the purpose of sharper presentation, five categories, with identical class intervals for both the variables, have been determined and corresponding percentage shares of TCD for each AHC category by size of debt have been derived and presented in Table 24. The figures show that households belonging to the five categories by their size of debt accounted for roughly the same portion (about 20%) of the total cash dues in the rural areas.

12.2.2 *Category-wise shares* : Although, the share in TCD in the five categories of debt size was found to be almost equal, Table 24 shows that substantial differences in the values of shares existed over AHCs, for almost each of these categories. For the lowest category viz. debt size less than Rs. 5000, the shares are found to fall sharply over the AHCs. This falling pattern is seen in the next category (i.e. debt size between Rs.5 to 10 thousand) too, but the pattern gets virtually reversed in the top two categories viz. debt of Rs. 20,000 or more . The table shows that a major portion - 85% or more - of the TCD of the poorer households (i.e. those owning assets less than Rs. 20,000

Table 25

Percentage of households reporting current liabilities(P) on the date of survey and average value(Rs.) of such liabilities(A) by nature of liabilities for each occupational category

	cash		kind		cash &/or kind	
cultivator	P	A	P	A	P	A
cultivator	8.1	183	5.3	69	13.2	252
non-cultivator	6.7	93	4.8	36	11.4	129
all	7.6	152	5.2	58	12.6	210

Note: In any row, 'P' values are non-additive as a household may report both cash and kind liabilities.

corresponding to the three lower AHC categories) was accounted by debts of small size viz. upto Rs. 20,000.

12.2.3 If households are further analysed by looking at the portion of debt borne by them in loans in excess of their asset holdings, the table shows that for the lowest AHC category, more than half of the TCD was on debt whose size exceeded Rs. 5,000. The share of TCD in the next higher AHC for borrowings exceeding Rs. 10,000 dropped abruptly to 20%. For each of the subsequent AHC categories too, share of TCD for households saddled with borrowings exceeding the value of their assets was about 15%.

13. CURRENT LIABILITIES

13.1.1 Till now, all discussions on household liabilities were concentrated on cash loans only as the outstanding cash dues of households accounted for more than 97% of the total household debt at the national level from 1961

to 1981. RBI(1977) monograph on "Indebtedness of rural households and availability of institutional finance" and NSS Report No. 322 "Some aspects of indebtedness of rural and urban households" (1985) may be seen in this regard (see also footnote 3 in sec.2 of this chapter). However, in the earlier rounds of AIDIS, any liability, other than loans taken in cash by a household, was covered under 'kind' loan. In the present survey, liabilities of a household other than cash loans could be 'kind loans' or 'other liabilities'(see Chapter 1). The following discussion is based on a clubbing of these two items under "current liabilities" of a household. Such a table on current liabilities has been generated for the first time from the Debt & Investment survey.

13.1.2 It may be noted that the nature of any individual liability -- cash or kind -- was determined solely by the manner in which the liability was contracted by the household. If it was contracted in cash (kind), regardless of the mode of repayment, it was deemed to be cash (kind) liability.

13.2 Incidence and average value of current liabilities

13.2.1 As per the survey data presented in Table 25, incidence of current liabilities (hereafter, referred to as IOCL in brief) in 1991⁷ was 13% in rural India. This figure as

⁷ Following the convention stated earlier, reference period is taken as 1991 . However, all estimates pertaining to current liabilities are based on the actual date of survey, which was a moving reference day. Since estimates of outstanding cash dues of households for this survey have been generated as on 30.6.91, strictly speaking, these cannot be added to the estimates of households current liabilities to arrive at the "total debt" of households as on the date of survey for the present round..

markedly lower than 23%, the reported incidence of indebtedness (see Section 3) in rural India. Further, the estimated average value of current liabilities per household (referred to subsequently as AOCL in brief) in 1991 was Rs. 210, which was about one tenth of the value of average amount of cash dues per household (see NSS Report 419), which was estimated as Rs. 1,906.

13.2.2 Differences by occupation category: Table 25 reveals that not much difference existed between the two occupational categories in the percentage of households reporting current liabilities in 1991. The story, however, was different for AOCL. *Cultivators* reported a distinctly higher value (Rs.252) of AOCL than the *non-cultivator* households(Rs.129) at the national level.

13.3 Duration of outstanding current liabilities

13.3.1 Incidence: For rural households, Table 26 shows that about half of the reported current liabilities were for "less than 3 months". The incidence decreased as the duration of outstanding liabilities increased till one year.

13.3.2 Share of aggregate outstanding current liabilities : Table 26 tells that, for rural India as a whole, the share of the aggregate quantum of current liabilities, by different periods for which they remained due, was the maximum - about 35% - for the longest outstanding period viz. 1 year or more. However, the two shortest periods : "less than 3 months" and "3 to 6 months" are seen to

Table 26

Percentage of households reporting current liabilities (P) on the date of survey and their percentage share (S) in total current liabilities by duration

Rural		
duration of outstanding liabilities	P	S
less than 3 months	6.4	24
3-6 months	3.1	24
6-12 months	1.7	17
1 year or more	2.0	35
all	12.6	100

Note: The 'P' column is non-additive as a household may report liabilities of different durations.

account for 24% each, leaving the balance 17% for the period "6 - 12 months".

A note on recording purposes of loans

The procedure followed for recording purposes of loans in different AIDIS rounds is stated below.

(I) In AIDIS 26th Round (1971-72)

The purposes were classified into 11 categories as stated below :

1. Capital expenditure on farm business
2. Current expenditure on farm business
3. Capital expenditure on non-farm business
4. Current expenditure on non-farm business
5. Household expenditure
6. Expenditure on litigation
7. Repayment of debt
8. Financial investments
9. Others
10. More than one purpose
11. Unspecified

(II) In AIDIS 37th Round (1981-82)

The purposes were classified into 10 categories as stated below :

1. Capital expenditure on farm business
2. Current expenditure on farm business
3. Capital expenditure on non-farm business
4. Current expenditure on non-farm business
5. Household expenditure
6. Expenditure on litigation
7. Repayment of debt
8. Financial investments
9. Others
10. Unspecified

(III) In AIDIS 48 th Round (1991-92)

The purposes were determined by a combination of codes of :

- (A) whether taken for farm, non-farm or household expenditure, and
(B) type of expenditure.

The codes for (A) were as follows :

<u>(A)</u>	<u>code</u>
for farm business	1
for non-farm business	2
for household	3

The codes for (B) were as follows :

<u>Type of expenditure (B)</u>	<u>code</u>
(new) purchase, own construction, major repairs, additions, alterations & improvement of other constructions	01
(old) purchase of buildings & other constructions	02
purchase of land & land rights	03
bunding & other land improvement including reclamation of land	04
purchase of livestock (in farm business only)	05
(new) purchase, own construction, major repairs & improvement of machinery & equipments, including transport equipments, furniture fixtures & household durables	06
(old) purchase of machinery & equipments including transport equipments, furniture & fixtures & household durables	07
current expenditure for raw materials etc. & those for normal repairs & maintenance of buildings construction machinery & equipments including transport equipments, furniture & fixtures & household durables	08
expenditure on education	09
marriage in the household	10
financial investment by the household	11
repayment of debt by the household	12
other household expenditure	13
any other type of expenditure not mentioned above	99

The various purposes were recorded as per the code combinations as indicated below :

<u>Purpose</u>	<u>Combinations of (A) codes with (B) codes</u>	
	<u>(A) code</u>	<u>(B) code</u>
capital expenditure	1	01 or 04
current expenditure	1	08
others	1	02 or 03 or 07 or 99 or any other code other than 01-13 or 99
<u>in non-farm business</u>		
capital expenditure	2	01 or 04 or 06
current expenditure	2	08
others	2	02 or 03 or 07 or 99 or any code other than 01-13 or 99
<u>in household</u>		
capital expenditure	3	01 or 04
for residential building		
current expenditure	3	08
others	3	02 or 03 or 06 or 07 or 09 or 10 or 11 or 12 or 13 or 99 or any code other than 01-13 or 99
<u>unspecified</u>	(a) code other than 1,2,3	any code
	(b)	
	1	05 or 06 or 09 or 10 or 11 or 12 or 13
	2	05 or 09 or 10 or 11 or 12 or 13
	3	05
