## Preface

India has a large agrarian economy with most of its rural population subsisting on farming. Over the decades since independence, Government has made concerted efforts to improve the lot of the farmers. In the new millennium, the Union Ministry of Agriculture desired that a comprehensive Socio-Economic study of the Indian farmers covering educational level, level of living, farming practices, possession of productive assets, awareness and access to modern technology, resource availability, indebtedness and a host of other relevant issues be studied through a special survey. Subsequently, the National Sample Survey Organisation (NSSO) conducted the Situation Assessment Survey of Farmers during 2003 in the rural areas, as part of the NSS 59<sup>th</sup> round.

Data for the survey were collected from 51770 households spread over 6638 villages from across the country in the Central Sample. A farmer for this survey was identified as a person who possessed some land and performed agricultural activities on any part of that land during the 365 days preceding the date of survey. A farmer household was termed as a household in which there was at least one farmer. Agricultural activities included cultivation of field and horticultural crops, growing of trees or plantations such as rubber, tea etc and animal husbandry, fishery, sericulture etc.

This report is the fourth in the series of five reports to be brought out on the basis of the data collected through the survey. It deals with different dimensions in the level and pattern of consumer expenditure and related aspects of the standard of living of the farmer households. It also shows the distribution of MPCE for the farmer households by different items of food and non-food groups and their comparison over those for the all rural households.

In Chapters One, Two and Three are given the introduction, concepts and definitions used, and the summary of findings of the survey respectively. The detailed tables at the State/UT and All-India level are given in Appendix A and the sample design and estimation procedure in Appendix B. Facsimile of the schedule used for data collection is given in Appendix C.

All the technical work including development of sampling design, survey instruments and preparation of the report was undertaken by the Survey Design and Research Division of the NSSO. The fieldwork was conducted by the Field Operations Division and the data processing and table generation by the Data Processing Division. The Coordination and Publication Division was responsible for the over-all coordination. The Chairman and Members of the Governing Council of NSSO along with the Chairman and Members of the Working Group set up for this round provided the technical directions and guidance at every stage of the survey. I am grateful to all of them. The report I hope will be useful to the planners, policy makers and researchers. Comments and suggestions are most welcome.

Dr. S Ray

## Consumption Expenditure of Farmer Households

- The average MPCE for farmer households at all India level during the year 2003 was Rs. 502.83 (less by 9.3%) compared to Rs. 554.15 for all rural households.
- The corresponding break-ups for food and non-food groups were Rs.278.74 and Rs. 224.09 for farmer households (less by 6.6% and 12.3% respectively) in comparison with Rs. 298.57 and Rs. 255.59 for all rural households.
- At all India level the sex ratio in farmer population was 942 compared to 957 in all rural population. The figures corresponding to children and adults were 925 and 952 compared to 915 and 982 in all rural population.
- At all India level about 4% of farmer households had MPCE less than Rs. 225, 8% had MPCE less than Rs. 300 and 15% had MPCE less than Rs. 380. On the other hand, 7.5% of the farmer households had MPCE more than Rs. 950 and 26% had MPCE more than Rs. 615.
- The average household size for farmers was 5.5 at all India level. It was highest (6.9) for households having MPCE less than or equal to Rs. 225 and lowest (4.1) for households having MPCE more than Rs. 950. Also, average household size declined steadily over successive classes of MPCE.
- At state level, Bihar and Uttar Pradesh registered highest average household size (6.1) for farmers, followed by Haryana (6.0) and Rajasthan (5.9). Whereas Tamil Nadu registered lowest average household size (4.4), followed by Kerala and Andhra Pradesh (both 4.7).
- The average MPCE during 2003 was highest for the farmers of Kerala (Rs. 900.59) followed by Nagaland (Rs. 882.93) and Punjab (Rs. 828.01).
- For the farmer households average MPCE during 2003 was lowest for Orissa (Rs. 341.75), preceded by Jharkhand (Rs. 352.85), Chhattisgarh (Rs. 378.89) and Bihar (Rs. 403.60).

- The sex ratio in farmer population was highest in Himachal Pradesh (1089), followed by Kerala (1048) and Uttaranchal (1014). It was lowest in Assam (849), preceded by Punjab (859) and Tripura (870).
- In terms of value of per-capita consumption of cereals, Manipur registered the highest i.e. Rs. 193.31 (33% of MPCE); then came Arunachal Pradesh (Rs. 167.84 or 29%), Nagaland (Rs. 166.76 or 19%) and Mizoram (Rs. 150.77 or 23%).
- The consumption of cereals was lowest in Punjab (Rs. 73.46 or 9% of MPCE), preceded by Haryana (Rs. 74.01 or 10%) and Gujarat (Rs. 80.16 or 14%).
- The percentage share of all food taken together to total consumption expenditure was highest for the farmer households of Assam (65%); then came Jharkhand (64%), Bihar (62%), West Bengal (61%) and Sikkim (60%).
- An estimated 22% of the farmer households in Orissa, 11% in Jharkhand 8% in both Madhya Pradesh and Chhattisgarh and 6% in Bihar had MPCE less than or equal to Rs. 225.
- About 57% farmer households in Orissa, 50% in Jharkhand, 44% in Chhattisgarh, 37% in Madhya Pradesh and 34% in Bihar had MPCE less than or equal to Rs. 340.
- On the other hand, 94% farmer households in Nagaland, 68% in Punjab, 67% in Kerala, 63% in Jammu & Kashmir and 59% in Haryana had MPCE more than Rs. 615.
- About 36% of the farmer households in Nagaland, 35% in Kerala, 28% in Punjab and 23% in Haryana had MPCE more than Rs. 950.
- Per capita consumption of ‘pan, tobacco & intoxicants’ per 30 days was highest in Meghalaya (Rs. 43.30), followed by Mizoram (Rs. 40.53), Aurnachal Pradesh (Rs. 30.75) and Tripura (Rs. 29.96).
- Per capita monthly expenditure on education was highest in Nagaland (Rs. 77.21); then came Haryana (Rs. 48.01), Punjab (Rs. 42.87) and Kerala (Rs. 42.36).
- Per capita monthly medical expenses was highest for the farmer households belonging to Kerala (Rs. 97.78), followed by Punjab (Rs. 63.04), Tamil Nadu (Rs. 48.76), Maharashtra (Rs. 47.71) and Haryana (Rs. 46.98).

Table No.	Title	Page
1	Statewise per 1000 distribution of farmer households and persons, and average number of persons per 1000 farmer households i) as adults and children by sex, ii) engaged in farming and iii) attending formal training in agriculture, in different MPCE classes	A-1 – A-15
2	Statewise per 1000 distribution of farmer households by food availability status separately for households having different sources of income	A-16 – A-25
3	Statewise average quantity (in kg) of consumption of cereals, cereal substitutes , gram and pulses of farmer households per person per 30 days for each MPCE class	A-26 – A-40
4	Statewise average value (in Rs.) of consumption of cereals, cereal substitutes , gram and pulses of farmer households per person per 30 days for each MPCE class	A-41 – A-55
5	Statewise break-up of total monthly per-capita consumer expenditure (MPCE) over broad groups of items for farmer households in different MPCE classes	A56 – A84
6	Statewise and itemwise average quantity and value of consumption per person of farmer households per 30 days	A85 – A142

# **Chapter One**

## **Introduction**

**1.0** At the beginning of this millennium, the Union Ministry of Agriculture had planned for a comprehensive assessment of the situation of farmers in the country. The areas of interest were their level of living as measured by consumer expenditure, income and productive assets, their indebtedness, farming practices and preferences, resource availability, their awareness of technological developments and access to modern technology in the field of agriculture. To meet these requirements, the Situation Assessment Survey of Farmers (SAS) was conducted by the National Sample Survey Organisation (NSSO) in the Ministry of Statistics and Programme Implementation during January to December, 2003, as part of its 59<sup>th</sup> round.

**1.1** The survey was conducted only in the rural sector of the country. In all, 51,770 households spread over 6,638 villages were surveyed in the Central Sample. In the State Sample, seven States/UT's, namely, Andhra Pradesh, Chandigarh, Gujarat, Maharashtra, Meghalaya, Orissa and Tripura participated. The Central Sample covered the rural area of the whole of the Indian Union except (i) Leh (Ladakh) and Kargil districts of Jammu & Kashmir, (ii) interior villages of Nagaland situated beyond five kilometres of any bus route and (iii) villages in Andaman and Nicobar Islands which remain inaccessible throughout the year.

**1.2** A farmer household was defined as one which had at least one farmer as a member. A farmer was understood to be a person who possessed some land and was engaged in agricultural activities on any part of that land during the last 365 days. Agricultural activity was taken to include cultivation of field and horticultural crops, growing of trees and plantations such as rubber, cashew, coconut, pepper, coffee, tea, etc; and animal husbandry, poultry, fishery, bee-keeping, vermiculture, sericulture, etc. By cultivator was meant a farmer who had been engaged in activities related to production of crops by tillage and ancillary jobs.

**1.3** There were four subjects of enquiry in the 59<sup>th</sup> round of NSS: Land and Livestock Holdings (Schedule 18.1), Debt and Investment (Schedule 18.2), Consumer Expenditure (Schedule 1.0), and Situation Assessment Survey of Farmers (Schedule 33). Only the Situation Assessment Survey was restricted to rural India; the others covered both rural and urban areas of the country. The survey period of the 59th round was from January to December, 2003. The period was further divided into two sub-rounds. Sub-round 1 consisted of the first half of the survey period of each visit while sub-round 2 consisted of the remaining period. Equal numbers of sample FSU's were allotted to each sub-round and an FSU was normally surveyed in the sub-round to which it was allotted. Because of arduous field conditions, this restriction was not strictly enforced in Andaman and Nicobar Islands, Lakshadweep, and rural areas of Arunachal Pradesh and Nagaland. With the exception of consumer expenditure, all the enquiries required two visits to each sample household for collection of data: one during January to August (visit 1) and the other during September to December (visit 2). Accordingly, each sample first stage unit

(village or block) was visited twice by the investigator to whom it was allotted. Canvassing of the listing schedule (Schedule 0.0) and selection of the sample households was carried out in the visit 1 only.

**1.4** The present report is the fourth of a series of five reports planned to be brought out on the basis of the Situation Assessment Survey of Farmers. The first three reports dealt with Indebtedness of Farmer Households; Access to Modern Technology for Farming; and Some Aspects of Farming. The fifth report will be on: Income, Expenditure and Productive Assets of Farmer Households. The present report deals with Consumption Expenditure of Farmer Households. It presents different facets of the variation in the level and pattern of consumer expenditure and related aspects of the standard of living of the farmer households. It covers some demographic aspects of farmer households such as average household size, and sex ratio for adults, children and all persons over different MPCE classes. It also shows the distribution of MPCE of the farmer households across the States and at all India level by different items of food and non-food groups and their comparison with those for the all rural households (as brought out by the consumer expenditure survey of the same round).

**1.5** Detailed estimates at State and Union Territory level are presented in Appendix A of the report. The sample design and estimation procedure are explained at length in Appendix B. A facsimile of the schedule of enquiry (Schedule 33) is included as Appendix C. Concepts and definitions followed in the survey are set out in Chapter Two and the results of the survey are presented in brief in Chapter Three: Summary of Findings.

**1.6** Since estimates based on very small samples may not be reliable, it was decided to release State-level estimates if the total number of sample farmer households for the State was at least 300. As a consequence, for Tables 1 to 6 in Appendix A, separate figures for the States of Delhi and Goa could not be brought out. From similar considerations figures for all the UT's have been clubbed and shown under the head 'Group of UT's'. It may be noted that data from all the States and UT's have been used in the building up of All-India estimates.

# Chapter Two

## Concepts and Definitions

### **Consumption Expenditure of Farmer Households:**

**2.0** Before discussion on the main findings on Consumption Expenditure of Farmer Households, the concepts and definitions of different terms used in the survey are given below.

**2.1 Household:** A group of persons normally living together and taking food from a common kitchen constitutes a household. By "normally" is meant, temporary visitors are excluded while temporary stay-aways are included. Thus, a son or a daughter residing in a hostel for studies is excluded from the household of his/her parents, but a resident employee or resident domestic servant or paying guest (but not just a tenant in the house) is included in the employer's/host's household. "Living together" is usually given more importance than "sharing food from a common kitchen" in drawing the boundaries of a household in case the two criteria are in conflict. However, in other cases, a person taking food with his family but sleeping elsewhere (say, in a shop or a different house) due to space shortage or otherwise, the household formed by such a person's family members is taken to include the person also. Each inmate of a mess, hotel, boarding and lodging house, hostel, etc. is considered as a single-member household except that a family living in such an establishment is considered as one household only. Under-trial prisoners in jails, indoor patients in hospitals and nursing homes are excluded from listing therein, but such persons are taken into consideration for listing in their original households. However, floating population without any normal residence, foreign nationals and their domestic servants, persons in barracks of military and paramilitary forces, and members of an orphanage or rescue home or ashram or vagrant house are excluded at the time of listing of households.

**2.2 Household size:** The size of a household is the total number of persons, normally living in the household.

**2.3 Adult:** A person who has completed 15 years of age.

**2.4 Farmer:** For the purpose of this survey, a farmer is defined as “a person who operates some land and was engaged in agricultural activities during the last 365 days”. Agricultural activities is meant the cultivation of field crops and horticultural crops, growing of trees or plantations (such as rubber, cashew, coconut, pepper, coffee, tea, etc.), animal husbandry, poultry, fishery, bee-keeping, vermiculture, sericulture, etc.

Thus, a person qualifies as a farmer if

- (i) he possessed some land (i.e. land, either owned or leased in or otherwise possessed), and
- (ii) he was engaged in some agricultural activities on that land during the last 365 days.

It may be noted that persons engaged in agricultural and/or allied activities but not operating a piece of land are not considered as farmers. Similarly, agricultural labourers,

coastal fishermen, rural artisans and persons engaged in agricultural services are not considered as farmers.

It is also quite possible that during the reference period of last 365 days, a person could have left his entire land as ‘current fallow’ by discretion or due to natural situation or otherwise. Such farmers are also excluded from the coverage of the present Situation Assessment Survey.

**2.5 Farmer household:** A household having at least one farmer as its member is regarded as a farmer household in the context of the present survey.

**2.6 Household consumer expenditure:** The expenditure incurred by a household on domestic consumption during the reference period is the household's consumer expenditure. Household consumer expenditure is the total of the monetary values of consumption of various groups of items, namely (i) food, pan (betel leaves), tobacco, intoxicants and fuel & light, (ii) clothing and footwear and (iii) miscellaneous goods and services and durable articles.

For groups (i) and (ii), the total value of consumption is derived by aggregating the monetary value of goods actually consumed during the reference period. An item of clothing and footwear would be considered to have been consumed if it is brought into maiden or first use during the reference period. The consumption may be out of (a) purchases made during the reference period or earlier; (b) home-grown stock; (c) receipts in exchange of goods and services; (d) any other receipt like gift, charity, borrowing and (e) free collection. Home produce is evaluated at the ex-farm or ex-factory rate. For evaluating the consumption of the items of group (iii), i.e., items categorised as miscellaneous goods and services and durable articles, a different approach is followed. In this case, the expenditure made during the reference period for the purchase or acquisition of goods and services is considered as consumption.

Consumption out of purchase is evaluated at the purchase price. Consumption out of home produce is evaluated at ex-farm or ex-factory rate. Value of consumption out of gifts, loans, free collections, and goods received in exchange of goods and services is imputed at the rate of average local retail prices prevailing during the reference period. It may be noted that goods procured by credit purchase are also to be considered as consumption of the household.

**2.7 Reference period:** The reference periods used for collection of consumption data for different groups of items are given below:

education, medical care (institutional), clothing, footwear and durable goods	last 365 days
all other items, viz., food, pan, tobacco and intoxicants, fuel & light, miscellaneous goods & services, and medical care (non-institutional)	last 30 days

**2.8 Monthly per capita consumer expenditure (MPCE):** For a household, this is its total consumer expenditure divided by its size and expressed on a per month (30 days) basis. A person's MPCE is understood as that of the household to which he or she belongs. For the Situation Assessment Survey the MPCE is based on the abridged version of the consumer expenditure schedule adopted in blocks 18 to 22 of the Schedule 33. MPCE has been used as classificatory variable for many tables in this report, where the classes were formed separately for rural and urban sectors, on the basis of the data from Schedule 1.0 in the 55<sup>th</sup>

round (1999-2000). The twelve classes had been formed in such a way that approximately 5% of the population belonged to each of the bottom two and top two classes and 10% of the population belonged to each of the middle eight classes. The MPCE classes for the rural sector were all along used in this report, as also used in the report no. 490, meant for Schedule 1.0 in the same round.

**2.9 Clothing and footwear:** This category includes bedsheets, bedcovers, pillows, curtains, mattresses, blankets, rugs, mats and mattings, cotton yarn, wool, and knitting wool. It, however, excludes tailoring charges, which come under "miscellaneous goods and services".

**2.10 Durable goods:** Items included here are distinguished from other miscellaneous goods by having a longer expected lifetime of use (roughly, one year or more). Expenditure incurred on repairs, and purchase and construction of durables used for domestic purpose is included in "expenditure on durable goods".

**2.11 Miscellaneous goods and services:** This is a residual group containing items other than food, pan, tobacco, intoxicants, fuel and light, clothing, footwear, rent, taxes and durable goods.

**2.12 Land possessed :** Land possessed by the household is obtained by summing the land areas (in hectares) for plots owned, leased in and otherwise possessed by the household and then subtracting the land area leased out by the household.

**2.13 Land owned :** A plot of land is considered to be owned by the household if the right of permanent heritable possession, with or without the right to transfer the title, is vested in a member or members of the household. Land held in owner-like possession under long term lease or assignment is also considered as land owned.

**2.14 Lease of land:** Land given to others on rent or free by owner of the land without surrendering the right of permanent heritable title is defined as land leased-out. It is defined as land leased-in if it is taken by a household on rent or free without any right of permanent or heritable possession. The lease contract may be written or oral.

Sometimes orchards and plantations are given to others for harvesting the produce for which the owner receives a payment in cash or kind. Such transactions are not treated as 'lease' for the purpose of the survey.

**2.15 Otherwise possessed land:** This is understood to mean all public/institutional land possessed by the household without title of ownership or occupancy right. The possession is without the consent of the owner. Private land (i.e. land owned by the household sector) possessed by the household without title of ownership and occupancy right is not included in this category. All private land encroached upon by the household is treated as leased-in land.

**2.16 Operational holding:** An operational holding is a techno-economic unit constituted of all land that is used wholly or partly for agricultural production and is operated (directed/managed) by one person alone or with assistance of others, without regard to title, size or location. The holding may consist of one or more parcels of land, provided

that they are located within the country and that they form part of the same technoeconomic unit.

**2.17 Crop seasons (Kharif and Rabi):** Generally, the agricultural year is divided into two main crop seasons, Kharif and Rabi. The crop season is identified by the months of harvesting of the crop during the year. In a broad sense, crops which are harvested in the period from July to December are known as Kharif crops, while Rabi crops are those which are harvested during January to June. For the purpose of the survey, Kharif season included both early Kharif (i.e. autumn) and late Kharif (i.e. winter). Similarly, the Rabi season included both Rabi and Zaid Rabi (i.e. summer). The harvesting months of the early Kharif and the late Kharif seasons may extend over July to October and November to January, respectively. Again, the crops of Rabi and Zaid Rabi seasons may be harvested during December to April and May to July, respectively. However, there may be further departure from this general rule in case of some crops grown in certain regions. Therefore, the general policy is to ascertain the crop season from the farmer who has harvested the crop. As a general guideline, the crop seasons for some principal crops are given as shown below:

<b>crop</b>	<b>season</b>	<b>crop</b>	<b>season</b>
Rice	Kharif,Rabi (summer)	Sugarcane	Kharif
Wheat	Rabi	Sesamum	Kharif, Rabi
Jowar	Kharif, Rabi	Groundnut	Kharif
Bazra	Kharif	Linseed	Rabi
Maize	Kharif	Castor	Kharif
Ragi	Kharif	Cotton	Kharif
Barley	Rabi	Tobacco	Kharif
Gram	Rabi	Jute	Kharif

However, it was ensured that all the crops, whether principal or not, grown during the agricultural year 2002-03 were duly considered in either Kharif or Rabi season. For land without crop, July to December 2002 was treated as Kharif season and January to June 2003, as Rabi season.

**2.18 Social group:** There are in all four social groups, namely, scheduled caste, scheduled tribe, other backward class and others. Those who do not come under any one of the first three social groups are assigned to ‘others’ meant to cover all other categories. In case different members of a household belong to different social groups, the group to which the head of the household belongs is considered as the ‘social group’ of the household.

**2.19 Principal source of income:** The principal source of income of the household is the source which yielded maximum income among various sources from which the household received any income during the 365 days prior to the date of survey. The different sources are (i) cultivation, (ii) farming other than cultivation, (iii) other agricultural activity, (iv) wage/salaried employment, (v) non-agricultural enterprises, (vi) pension, (vii) remittances, (viii) interest and dividends and (ix) others. It may be noted that income received from begging, prostitution, etc. is not considered in determination of principal source of income.

Here, ‘cultivation’ is meant activities related to production of crops by tillage and related ancillary activities. ‘Farming other than cultivation’ includes animal husbandry, poultry, fishery, bee-keeping etc.; whereas growing of trees, horticultural crops (orchards)

and plantations (rubber, cashew, pepper, coffee, tea, etc.) are considered under ‘other agricultural activity’.

**2.20 No. of villages surveyed:** Table A below shows, State/UT-wise, the number of villages allotted for survey and the number actually surveyed, and the number of sample farmer households for which Schedule 33 was canvassed along with the number of sample persons. It may be noted that 93 sample villages falling in disturbed areas – 77 in Jammu & Kashmir and 16 in Assam – could not be surveyed. Apart from this, 29 villages – 8 in Tamil Nadu, 2 in Arunachal Pradesh and 19 in the Andaman & Nicobar Islands – became casualty as they could not be surveyed within the deadline set for Visit 1. In Visit 2 four more villages became casualty. The difference in the number of sample households (as well as the number of sample persons) surveyed in visit 2 from those of visit 1 was mainly due to non-existence of those households because of change or shift of residence or due to casualty for some other reason.

Table A: Number of villages allotted and surveyed, and number of farmer households and persons surveyed for the Situation Assessment Survey

State/UT	no. of villages allotted	no. of villages surveyed		no. of households surveyed		no. of persons surveyed	
		visit 1	visit 2	visit 1	visit 2	visit 1	visit 2

# **Chapter Three**

## **Summary of Findings**

**3.0** The objective of the Situation Assessment Survey of Farmers (SAS) was to assess the state of the farming community of the country through their level of living as measured by consumer expenditure, farm and non-farm business, productive assets, income and indebtedness; their farming practices, preferences, and resource availabilities; awareness and access to modern technological developments etc.

The present report brings out various facets of household consumption expenditure of farmers. The main results are shown under Tables 1 to 6 in Appendix A. Table 1 shows per 1000 distribution of farmer households and persons by MPCE class, and average number per 1000 farmer households of adults and children by sex in different MPCE classes. Table 2 shows per 1000 distribution of farmer households by food availability status for each source of income. Table 3 presents quantity (kg) of consumption of cereals, cereal substitutes, gram and pulses of farmer households per person for a period of 30 days in each MPCE class, Table 4 shows corresponding values (Rs) of consumption in each MPCE class. Table 5 shows break-up of total monthly per capita consumer expenditure over broad groups of items for farmer households in different MPCE classes whereas Table 6 presents quantity and value of consumption per person of farmer households per 30 days for a detailed list of items.

It may be noted that the Table 2 in Appendix A is based on visit 1 data only, since information on sufficiency of food in Block 5, Schedule 33 (see Appendix C) were collected only in visit 1. But Tables 2 and 3 to 6 in appendix A were based on data for both the visits 1 and 2 with weights 2:1, since visit 1 was extended to eight months from January to August, 2003 and visit 2 to four months from September to December, 2003. The Summary of Findings is now arranged according to the subjects in the order given below:

- Demographic characteristics of farmer population: all India and States
- Break-up of MPCE for farmer households against all rural households: all India
- Break-up of MPCE by broad item groups- cereals, food and non-food by States
- Distribution of farmer households and population over MPCE class by States
- Consumption pattern of cereals in different States
- Break-up of MPCE on different items of non-food group by States
- MPCE for farmer households versus all rural households by States.

**3.1 Demographic characteristics of farmer population: all India and States:** Statement 1 shows distribution of farmer households, average household size and sex ratio for adults, children and all persons belonging to farmer households at the all-India level over different MPCE classes. By sex ratio is meant the number of females per thousand males. It is observed that concentration of households was maximum (11.8%) in the MPCE class 615-775, followed by the classes 525-615 (11.7%), 420-470 (10.4%) and 470-525 (9.7%). That is, more than 43% of the farmer households had MPCE in the range of Rs. 420 to Rs. 775. About 15% of the farmer households had MPCE less than or equal to Rs. 300 and nearly one-third of the farmer households had MPCE less than or equal to Rs. 380. On the other hand, only 7.5% of the farmer households had MPCE more than Rs. 950 and about 14% had MPCE more than Rs. 775.

The average household size estimated at all-India level was 5.5. It was highest (6.9) in the lowest MPCE class and reduced to 4.1(lowest) in the highest MPCE class. Also average household size declined steadily over successive classes of MPCE. The sex ratio in the farmer population, at all India level, had been 942 for all persons, 952 for adults and 925 for children. The corresponding figures for all rural population were 957, 915 and 982 respectively (refer to NSS Report No. 490 on the Schedule 1.0, 59<sup>th</sup> round). Except for the first two MPCE classes (and first three MPCE classes for the adults) the sex ratio had always been less than 1000. It is also observed that the sex ratios for children in comparison to those for adults were all along on the lower side except in the first two MPCE classes where it was more than 1000. Figure 1 below shows the sex ratio among adults and children in different MPCE classes, at all India level.

#### Statement 1: Distribution of farmer households and persons over different MPCE classes: all-India

MPCE class (Rs.)	per 1000 no. of house- holds	average household size	sex ratio			estimated no. of households (00)	estimated no. of persons (00)
			adults	children	all

Statement 2 provides average household size, average MPCE and sex ratio of farmer population at the State and all-India levels. It is observed that the estimated average household size was highest (6.1) in Bihar as well as Uttar Pradesh, followed by Haryana (6.0) and Rajasthan (5.9). On the other hand, average household size was lowest in Tamil Nadu (4.4), preceded by Kerala and Andhra Pradesh (both 4.7); Arunachal Pradesh, Orissa and Tripura (all 5.0).

The sex-ratio was estimated to be highest in Himachal Pradesh (1089), followed by Kerala (1048) and Uttaranchal (1014). It was less than 1000 in all other States including the group of UT's. It was lowest in Assam (849), preceded by Punjab (859) and Tripura (870).

The estimated average MPCE for farmer households during the year 2003 at all India level came about Rs.502.83. It was highest in Kerala (Rs.900.59), followed by Nagaland (Rs.882.93), Punjab (Rs.828.01) and Haryana (Rs.741.10). The estimated MPCE was lowest in Orissa (Rs.341.75); then came Jharkhand (Rs.352.85), Chhattisgarh (Rs.378.89) and Bihar (Rs.403.60).

Figures 2.1 and 2.2 at page 11, show the distribution of MPCE for the farmer households in different States with higher and lower series of MPCE respectively.

#### **Statement 2 : Average household size, MPCE and sex ratio in each State and all-India.**

State/UT	average household size	average MPCE (Rs.)	sex ratio	estd. no. of households (00)	estimated no. of persons (00)

**Figure 2.2: Average MPCE in various low-MPCE States**

### **3.2 Break-up of MPCE for farmer households against all rural households: all India**

Statement 3 presents the break-up of MPCE for farmer households in comparison to those for all rural households, at the all India level. Before comparing of the two sets of data, we have to remember that MPCE for all rural households was based on Consumer Expenditure Schedule 1.0 surveyed in the same round and that for the farmer households was based on the data from the Blocks 18-22 of the Schedule 33. In Schedule 1.0, there were a total of 360 items (inclusive of sub-totals and totals), compared to only 70 items in Schedule 33. That is, consumer expenditure part of schedule 33 was a much-abridged version of the usual consumer expenditure Schedule 1.0.

The MPCE for all item groups taken together was estimated to be Rs. 502.83 for farmer households compared to Rs. 554.15 for all rural households. The corresponding break-ups of MPCE for food total were Rs. 278.74 and Rs. 298.57 and those for non-food total had been Rs. 224.09 and Rs. 255.59 for the farmer households and all rural households respectively. It is observed that except for cereals & cereal substitutes and milk & milk products, the MPCE corresponding to items in the food group for the farmer households were always on the lower side compared to those for all rural households. The phenomenon was also true for the items under non-food group, with the exception of expenditure on education and durable goods which were marginally higher for the farmer households.

#### **Statement 3 : Break-up of MPCE for farmer households and all rural households by item groups: all-India.**

Sl. no.	item group	monthly per capita exp. (Rs.)		Sl. no.	item group	monthly per capita exp. (Rs.)

1.	pan, tobacco & intoxicants	13.83	14.28		<b>all items</b>	<b>502.83</b>	<b>554.15</b>

\*includes gram

Figures 3.1 and 3.2 below show the break-up of MPCE for various item groups under food and non-food respectively. The item numbers printed horizontally in the graphs correspond to the serial numbers of items under food and non-food groups shown in the statement 3.

**3.3 Break-up of MPCE by broad item groups- cereals, food and non-food by States:**  
The break-ups of MPCE for farmer households on cereals, food and non-food and their percentage shares by different States and all India are available in Statement 4. Per capita monthly consumption of cereals per person per 30 days was Rs.101.27 (about 20% of MPCE) at all India level. It was reported to be highest (Rs. 193.31 or 33% of MPCE) in Manipur, followed by Arunachal Pradesh (Rs. 167.84 or 29%), Nagaland (Rs. 166.76 or 19%) and

Mizoram (Rs. 150.77 or 23%). The per capita monthly consumption of cereals was lowest in Punjab (Rs. 73.46 or 9%); thereafter came Haryana (Rs. 74.01 or 10%), Gujarat (Rs. 80.16 or 14%) and Madhya Pradesh (Rs. 81.91 or 20%).

The MPCE on food group was Rs.278.74 at all India level. It was highest in Nagaland (Rs. 478.02), followed by Kerala (Rs. 418.88), Punjab (Rs. 403.84) and Jammu & Kashmir (Rs. 396.86). On the other hand, the MPCE on non-food was highest in Kerala (Rs. 481.71), Punjab (Rs. 424.17), Nagaland (Rs. 404.91) and Haryana (Rs.347.13).

The percentage share of food in total consumption expenditure for all major States have been shown in Figure 4 at page 15. It was highest for the State of Assam (65%), followed by Jharkhand (64%), Bihar (62%), West Bengal (61%) and Sikkim (60%). The highest shares of non-food happened to be in Kerala (53%), Punjab (51%), Maharashtra (49%) and Himachal Pradesh (48%).

It may be stated that the variation observed across the States is partly due to variation in average MPCE and partly due to variation in composition of cereals. There are States consuming rice mainly, States which mainly consume wheat and States which consume other cereals mainly. Prices vary between these types of cereals. Naturally, average expenditure on cereals tends to be high in rice-consuming States compared to States consuming wheat and other cereals.

**Statement 4 : Average per capita consumption expenditure per 30 days on cereals, all food, non-food and their percentage shares in total consumption, by States and all-India.**

State/UT	MPCE (Rs.) on				percentage share in total expenditure		
	cereals	all-food	non-food	total	cereals	all-food	non-food
Andhra Pradesh	123.82	289.00	223.55	512.56	24.16	56.39	43.61
Arunachal Pradesh	167.84	307.42	275.23	582.65	28.80	52.76	47.24

**Figure 4: Percentage shares of food in total consumer expenditure of farmer households**

### 3.4 Distribution of farmer households and population over MPCE class by States:

Statement 5 shows the distribution of farmer households over different MPCE classes in each of the States and at all India level. About 4% of the farmer households at all India level had MPCE less than or equal to Rs.225 and 24% had MPCE less than or equal to Rs.340. It is observed that an estimated 22% of the farmer households in Orissa belonged to the lowest MPCE class where MPCE was Rs 225 or less. An estimated 11% of the farmer households in Jharkhand, 8% in Madhya Pradesh as well as Chhattisgarh and 6% in Bihar also had MPCE less than or equal to Rs. 225. About 57% of the farmer households in Orissa, 50% in Jharkhand, 44% in Chhattisgarh, 37% in Madhya Pradesh and 34% in Bihar had MPCE as Rs. 340 or less.

On the other hand, 94% of the farmer households in Nagaland, 68% in Punjab, 67% in Kerala, 63% in Jammu & Kashmir and 59% in Haryana had MPCE more than Rs. 615, whereas at all India level the percentage of the same was 26. Again, about 36% of the farmer households in Nagaland, 35% in Kerala, 28% in Punjab and 23% in Haryana had per-capita consumption expenditure more than Rs. 950. The corresponding percentage at all India level was 8 only.

Statement 6 shows similar distribution like statement 5, but for the farmer population. It may be observed that at all India level, 5% of the farmer population had MPCE as Rs. 225 or less; 19% had MPCE equal to or less than Rs. 300; whereas only 6% of the farmer population had MPCE more than Rs. 950 and 21% had MPCE more than Rs. 615. At the State level, 25% of the farmer population in Orissa, 13% in Jharkhand, 11% in Madhya Pradesh and 9% in Chhattisgarh had MPCE as Rs. 225 or less. About 49% of the farmer population in Orissa, 39% in Jharkhand, 33% in Chhattisgarh and 30% in Madhya Pradesh had MPCE equal to or less than Rs. 300.

On the other hand, 32% of the farmer population in Nagaland, 28% in Kerala, 24% in Punjab and 20% in Haryana were fairly prosperous, having MPCE more than Rs.950. Again, 94% of the farmer population in Nagaland, 65% in Punjab, 60% in Kerala, 58% in Jammu & Kashmir and 54% in Haryana had MPCE more than Rs.615.

Figure 5 below shows the percentage of households in different MPCE classes for some five States which accounted comparatively low MPCE for the farmer households. The MPCE classes are: 1 : 0-225, 2 : 225-255, 3 : 255-300, 4 : 300-340, 5 : 340-380, 6 : 380-420, 7 : 420-470, 8 : 470-525, 9 : 525-615, 10 : 615-775, 11 : 775-950, 12 : 950 +.

**Statement 5: Per 1000 distribution of farmer households over MPCE classes for each of the States and all-India**

State/UT	MPCE (Rs)												aver- age hhs size	estd. no. of hhs (00)	no. of sample hhs

**3.5 Consumption pattern of cereals in different States:** Statement 7 presents State-wise averages (both quantity and value) of per capita consumption per 30 days of cereals by the farmer households. Major rice-eating States were all the North-Eastern States, Andhra Pradesh, Chhattisgarh, Jharkhand, Orissa and West Bengal, whereas major wheat-consuming States were Bihar, Haryana, Himachal Pradesh, Madhya Pradesh, Punjab, Rajasthan, Uttar Pradesh and Uttarakhand. Other cereals such as jowar, bajra, maize, barley, small millets and ragi were the choice in Gujarat, Himachal Pradesh, Karnataka, Madhya Pradesh, Maharashtra and Rajasthan. The monthly per-capita rice consumption was highest in Manipur (15.7 Kg), followed by Arunachal Pradesh (14.0 kg), Orissa (13.8 kg) and West Bengal (13.3 kg). Farmers of Haryana consumed maximum quantity of wheat (9.8 kg per person per 30 days), followed by Rajasthan (9.6 kg), Punjab (9.5 kg) and Uttar Pradesh (8.8 kg). Other cereals shared the maximum consumption by the farmers of Gujarat (5.1 kg per person per 30 days), followed by Karnataka (4.9 kg) and Maharashtra (4.8 kg).

**Statement 7 : Average per capita consumption (quantity and value) of cereals per 30 days by States and all-India**

Figures 6.1 and 6.2 below show the per-capita consumption (quantity in kg) per 30 days of both rice and wheat by the States which had principal cereal as rice and wheat respectively.

**Figure 6.1: Per-capita consumption (quantity) of rice and wheat per 30 days in States where rice is the principal cereal**

**Figure 6.2: Per-capita consumption (quantity) of rice and wheat per 30 days in States where wheat is the principal cereal**

**3.6 Break-up of MPCE on different items of non-food group by States:** Statement 8 shows average monthly per-capita consumption expenditure on different items of non-food group in different States and at all-India level. It is seen that the expenditure of ‘pan, tobacco & intoxicants’ was highest in Meghalaya (Rs. 43.30), followed by Mizoram (Rs. 40.53), Arunachal Pradesh (Rs. 30.75) and Tripura (Rs. 29.96); whereas the all India average for the same was Rs. 13.83. The per capita monthly expenditure on education was highest in Nagaland (Rs. 77.21); then came Haryana (Rs. 48.01), Punjab (Rs. 42.87), Kerala (Rs. 42.36), Arunachal Pradesh (Rs. 39.93) and Manipur (Rs. 37.02). Figures 7.1 and 7.2 show the States having considerable shares of MPCE on pan, tobacco and intoxicants, and education respectively. Again, the five States having relatively high per-capita medical expenses were Kerala (Rs. 97.78), Punjab (Rs. 63.04), Tamil Nadu (Rs. 48.76), Maharashtra (Rs. 47.71) and Haryana (Rs. 46.98). MPCE on durable goods was highest in Kerala (Rs. 95.81) followed by Jammu & Kashmir (Rs. 48.00), Himachal Pradesh (Rs. 43.32) and the Group of UT’s (Rs. 39.47).

**Figure 7.1:Average Monthly Per capita Consumption Expenditure on pan, tobacco and intoxicants**

**Figure 7.2: Average Monthly Per capita Consumption Expenditure on education**

**Statement 8: Average per capita consumption expenditure (Rs.) on food and different groups of non-food by States and all-India.**

**3.7 MPCE for farmer households versus all rural households by States:** Statement 9 compares the MPCE on food, non-food and total for farmer households with those for all rural households. The MPCE for all rural households had been generated vide consumer expenditure Schedule 1.0 surveyed in the same round (refer to NSS report no. 490: Household Consumer Expenditure and Employment-Unemployment Situation in India, 2003). At all India level, the MPCE for farmer households for food, non-food and total were Rs.278.74, Rs.224.09 and Rs.502.83 compared to Rs.298.57, Rs.255.59 and Rs.554.15 respectively for all rural households. It is observed that with respect to all rural households the MPCE for farmer households were less by 6.6% for food, 12.3% for non-food and 9.3% for total.

At the State level, the MPCE for farmer households were all along less than those for all rural households, except for the States of Haryana, Punjab and Rajasthan in the food group and only Tripura in the non-food group. For Tripura, the total MPCE for farmer households (Rs.561.89) was also higher than that of all rural households (Rs. 560.80).

In general, the farmer households report lower MPCE on all food and non-food items than those reported by all rural households (refer to Report 490). A part of this difference may reflect genuine differences between the levels of living of the farmer and all rural households. However, a part may also be attributable to the abridged listing of consumption items in Schedule 33 in comparison with the detailed listing in Schedule 1.0. It is generally observed that an abridged listing may lead to recall lapse and hence to an underestimation of the level of MPCE on a given item group.

The Figures 8.1, 8.2 and 8.3 at page 25, show the consumption expenditure per person per 30 days for the farmer households as well as all rural households for the groups of food, non-food and total respectively.

**Statement 9: Comparison of MPCE for farmer households with all rural households.**

## APPENDIX B

### Sample Design and Estimation Procedure

**1. Geographical coverage:** The survey covered rural areas of the whole of the Indian Union except (i) Leh (Ladakh) and Kargil districts of Jammu & Kashmir, (ii) interior villages of Nagaland situated beyond five kilometres of the bus route and (iii) villages in Andaman and Nicobar Islands which remain inaccessible throughout the year. Urban areas were wholly excluded from this survey.

**2. Period of survey:** The survey period of the 59th round was from January to December, 2003.

**3. Sub-rounds:** The survey period was divided into two sub-rounds. Sub-round 1 consisted of the first half of the survey period of each visit while sub-round 2 consisted of the remaining period. Equal numbers of sample FSU's were allotted to each sub-round and an FSU was normally surveyed in the sub-round to which it was allotted. Because of arduous field conditions, this restriction was not strictly enforced in Andaman and Nicobar Islands, Lakshadweep, and rural areas of Arunachal Pradesh and Nagaland.

**4. Visits:** There were four subjects of enquiry in the 59<sup>th</sup> round of NSS: Land and Livestock Holdings (Sch.18.1), Debt and Investment (Sch.18.2), Consumer Expenditure (Sch.1.0), and Situation Assessment Survey of Farmers (Sch.33). Only the Situation Assessment Survey was restricted to rural India; the others covered both rural and urban areas of the country. With the exception of consumer expenditure, all the enquiries required two visits to each sample household for collection of data: one during January to August and the other during September to December. Accordingly, each sample first stage unit (village or block) was visited twice by the investigator to whom it was allotted. A small proportion of households could not be surveyed a second time due to varying reasons; for these, only one set of data could be collected. Some items of information were in any case collected in the first visit only; these included general household characteristics, age, sex, educational level and other characteristics of household members, awareness of certain aspects of farming and access to modern technology etc. Canvassing of the listing schedule (Sch. 0.0) and selection of the sample households was carried out in the first visit only.

**5. Participation of States:** Situation Assessment Survey of Farmers was conducted in the Central sample for all the States/UTs. In the State sample, the states of Andhra Pradesh, Chandigarh, Gujarat, Maharashtra, Meghalaya, Orissa and Tripura participated.

#### **6. Sample Design**

**6.1 Broad design:** A stratified multi-stage design was adopted for the 59<sup>th</sup> round survey. The first stage units (FSUs) were the census villages in the rural sector (panchayat wards in Kerala). The ultimate stage units (USUs) were households. Hamlet-groups constituted the intermediate stage whenever these were formed in the selected village.

**6.2 Sampling frame for First Stage Units:** The list of villages (panchayat wards for Kerala) as per Population Census 1991 was used as sampling frame.

**6.3 Stratification (Rural Sector) :** Two *special strata* have been formed at the State/ UT level, viz.,

Stratum 1: all FSUs with population between 0 and 50 and

Stratum 2: FSUs with population more than 15,000.

Special stratum 1 was formed whenever at least 50 such FSUs were found in a State/UT. Similarly, special stratum 2 was formed if at least 4 such FSUs were found in a State/UT. Otherwise, such FSUs were merged with the general strata.

From FSUs other than those covered under special strata 1 and 2, *general strata* were formed and their numbering started from 3. Each district of a State/UT was normally treated as a separate stratum. However, if the census rural population of the district was greater than or equal to 2 million as per population census 1991 or 2.5 million as per population census 2001, the district was split into two or more strata by grouping contiguous tehsils. However, in Gujarat, some districts were not wholly included in an NSS region. In such cases, the part of the district falling in an NSS region constituted a separate stratum.

**6.4 Total sample size (FSUs) and allocation to States and UTs:** 10608 FSUs were allocated at all-India level on the basis of investigator strength to different States/UTs for Central sample. The total number of sample FSUs was then allocated to the States and UTs in proportion to provisional population as per Census 2001 subject to the availability of investigators ensuring more or less uniform work-load.

**6.5 Allocation of State/UT Level Sample to Rural and Urban Sectors:** State/UT level sample size was allocated between the two sectors in proportion to provisional population as per Census 2001 with 1.5 weightage to urban sector subject to the restriction that the urban sample size for bigger states like Maharashtra, Tamil Nadu etc. would not exceed the rural sample size. Thus, a total of 6784 villages were to be selected in the rural sector all over the country.

**6.6 Allocation to Strata:** Within each sector of a State/UT, the respective sample size was allocated to the different strata in proportion to the stratum population as per Census 2001. Allocations at stratum level were adjusted to a multiple of 2 with a minimum sample size of 2. However, a multiple of 4 FSUs was allocated to a stratum wherever possible.

**6.7 Selection of FSUs:** FSUs were selected with Probability Proportional to Size With Replacement (PPSWR), size being the population as per Population Census 1991 in all the strata for the rural sector except for special stratum 1. In special stratum 1 of the rural sector, selection was done using Simple Random Sampling Without Replacement (SRSWOR). Samples were drawn in the form of two independent sub-samples.

## 7. Selection of Hamlet-groups and Households

**7.1 Formation of Hamlet-groups:** Large villages having approximate *present population* 1200 or more were divided into a suitable number of hamlet-groups (hg's) as given below:

approximate present population of the sample village	no. of hamlet-groups (hg's) to be formed
less than 1200	1 (i.e.no hg formation)
1200 to 1799	3
1800 to 2399	4
2400 to 2999	5
3000 to 3599	6
.....and so on	

For rural areas of Himachal Pradesh, Sikkim, Nagaland and Poonch, Rajouri, Udhampur, Doda districts of Jammu and Kashmir, the number of hamlet-groups (hg's) formed was as follows.

approximate present population of the sample village	no. of hamlet-groups (hg's) to be formed
less than 600	1 (i.e.no hg formation)
600 to 899	3
900 to 1199	4
1200 to 1499	5
.....and so on	

Hamlet-groups were formed by more or less equalising population. Two hamlet-groups were selected from a large village by SRSWOR. Listing and selection of the households was done separately for the two selected hamlet-groups so formed.

**8. Formation of Second Stage Strata (SSS):** After listing of the households in a village or in each of the two selected hamlet-groups in the village, the households were divided into suitable number of second stage strata.

**8.1 Schedule 33: Situation Assessment Survey (SAS):** Four different second stage strata were formed. The demarcation of the second stage strata (SSS) was as follows:

For the purpose of stratification, only a particular set of rural households i.e. the set of **farmer households** were considered. By farmer household is meant a household that possessed some land and was engaged in some farming activity during the last 365 days. Now SSS 1 was formed by all the farmer households possessing land less than 0.005 hectares. SSS 2, 3 and 4 were formed by the farmer households possessing land equal to 0.005 hectares or more. They were determined as under:

From the data of NSS 48<sup>th</sup> round, households having land area 0.005 hectares or more were considered. Two cut-off points, X and Y, were determined at State/UT level in such a way that 40% of these households possessed land area less than X, 40% possessed land area between X and Y and 20% possessed land area greater than Y.

Listed farmer households with land less than X formed SSS 2, those with land between X and Y constituted SSS 3 and those with land more than Y were in SSS 4.

Thus, the detailed constitution of the second stage strata for Schedule 33 was :

- SSS 1: households possessing land less than 0.005 ha and engaged in farming activity during the last 365 days
- SSS 2: households possessing land equal to or more than 0.005 ha but less than X and engaged in farming activity during the last 365 days
- SSS 3: households possessing land equal to or more than X but less than Y and engaged in farming activity during the last 365 days
- SSS 4: households possessing land equal to or more than Y and engaged in farming activity during the last 365 days

**Table 1: The values of cut-off points X and Y of land possessed (in hectares) for each State/UT**

State/UT	X	Y
(1)	(2)	(3)
Andhra Pradesh	0.223	1.574
Arunachal Pradesh	1.255	2.024
Assam	0.405	1.214
Bihar	0.154	0.979
Chattisgarh	0.809	2.149
Goa	0.125	0.712
Gujarat	0.773	2.930
Haryana	0.494	2.469
Himachal Pradesh	0.389	1.214
Jammu & Kashmir	0.575	1.566
Jharkhand	0.405	1.307
Karnataka	0.805	2.432
Kerala	0.069	0.445
Madhya Pradesh	1.052	3.752
Maharashtra	0.817	3.246
Manipur	0.299	1.052
Meghalaya	0.538	1.348
Mizoram	0.567	1.214
Nagaland	0.688	1.214
Orissa	0.401	1.352
Punjab	0.024	2.141
Rajasthan	1.085	4.152
Sikkim	0.607	1.862
Tamil Nadu	0.032	0.830
Tripura	0.162	0.728
Uttar Pradesh	0.348	1.384
Uttaranchal	0.283	0.809
West Bengal	0.138	0.850
A & N Islands	0.073	2.024
Chandigarh	0.125	1.251
D & N Haveli	0.506	1.085
Daman & Diu	0.182	0.971
Delhi	0.016	0.417
Lakshadweep	0.081	0.182
Pondicherry	0.016	0.421

**9. Allocation and selection of sample households:** Two households were selected from each second-stage stratum, which means an allocation of 8 sample households to each sample FSU. In case of hamlet-group formation, one household was selected from each SSS of each hamlet-group. Sample households were selected by SRSWOR in each SSS of each hamlet-group.

## 10. Estimation Procedure

### 10.1 Notations:

s = subscript for stratum

m = subscript for sub-sample (m = 1, 2)

i = subscript for FSU [village (panchayat ward for Kerala)]

d = subscript for a hamlet-group (d = 1, 2)

j = subscript for second stage stratum of an FSU/hg

k = subscript for sample household under a particular second stage stratum within an FSU/ hg

D = total number of hg's formed in the sample village (panchayat ward for Kerala)

$D^*$  = 1 if D = 1

=  $D / 2$  for FSUs with  $D > 1$

N = total number of FSUs in rural stratum 1

Z = total size of a rural stratum other than stratum 1 (= sum of sizes for all the FSUs of a rural stratum other than stratum 1)

z = size of sample village used for selection.

n = number of sample villages surveyed including zero cases but excluding casualties for a particular sub-sample and stratum.

H = total number of households listed in a second-stage stratum of a hamlet-group of sample FSU

h = number of households surveyed in a second-stage stratum of a hamlet-group of sample FSU

x, y = observed values of characteristics x, y under estimation

$\hat{X}$ ,  $\hat{Y}$  = estimates of population totals X, Y for the characteristics x, y

In terms of the above symbols,

$y_{smidjk}$  = observed value of the characteristic y for the k-th household in the j-th second stage stratum of the d-th hg(d = 1, 2) of the i-th FSU belonging to the m-th sub-sample for the s-th stratum;

However, for ease of understanding, a few symbols have been suppressed in the following paragraphs where they are obvious.

### 10.2 Formulae for estimation of aggregates for a particular sub-sample and stratum in rural sector (Schedule 33 was canvassed in rural sector only):

(a) Estimation formula for stratum 1:

(i) For households selected in j-th second stage stratum:

$$\hat{Y}_j = \frac{N}{n_j} \sum_{i=1}^{n_j} D_i^* \left[ \frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

(ii) For all selected households:

$$\hat{Y} = \sum_j \hat{Y}_j$$

(b) Estimation formula for other strata:

(i) For households selected in j-th second stage stratum:

$$\hat{Y}_j = \frac{Z}{n_j} \sum_{i=1}^{n_j} \frac{1}{z_i} D_i^* \left[ \frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

(ii) For all selected households:

$$\hat{Y} = \sum_j \hat{Y}_j$$

### 10.3 Overall estimate for aggregates:

Overall estimate for aggregates for a stratum ( $\hat{Y}_s$ ) based on two sub-samples is obtained as:

$$\hat{Y}_s = \frac{1}{2} \sum_{m=1}^2 \hat{Y}_{sm}$$

### 10.4 Overall estimate of aggregates at State/UT/all-India level:

The overall estimate  $\hat{Y}$  at the State/ UT/ all-India level is obtained by summing the stratum estimates  $\hat{Y}_s$  over all strata belonging to the State/ UT/ all-India.

### 10.5 Estimates of ratios:

Let  $\hat{Y}$  and  $\hat{X}$  be the overall estimates of the aggregates  $Y$  and  $X$  for two characteristics  $y$  and  $x$  respectively at the State/ UT/ all-India level.

Then the combined ratio estimate ( $\hat{R}$ ) of the ratio ( $R = \frac{Y}{X}$ ) is obtained as

$$\hat{R} = \frac{\hat{Y}}{\hat{X}}$$

## 10.6 Estimates of error:

The variances of the above estimates are estimated as follows:

A) For aggregate  $\hat{Y}$ :

$$V\hat{a}r(\hat{Y}) = \sum_s V\hat{a}r(\hat{Y}_s)$$

where  $V\hat{a}r(\hat{Y}_s)$  is as given below.

a) For strata with PPSWR selection at first stage (i.e. for all rural strata except stratum 1):

$$V\hat{a}r_{ppswr}(\hat{Y}_s) = \sum_j V\hat{a}r(\hat{Y}_{sj})$$

$$\text{where } V\hat{a}r_{ppswr}(\hat{Y}_{sj}) = \frac{1}{n_{sj}(n_{sj}-1)} \left[ \sum_{i=1}^{n_{sj}} \frac{Z_s^2 \hat{Y}_{sij}^2}{z_{si}^2} - n_{sj} \hat{Y}_{sj}^2 \right],$$

$$\hat{Y}_{sij} = D_{si}^* \left[ \frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

b) For strata with SRSWOR selection at first stage (i.e. for rural stratum 1):

$$V\hat{a}r_{srswor}(\hat{Y}_s) = \frac{1}{4} (\hat{Y}_{s1} - \hat{Y}_{s2})^2 ,$$

where  $\hat{Y}_{s1}$  and  $\hat{Y}_{s2}$  are the estimates for sub-sample 1 and sub-sample 2 respectively for stratum  $s$ .

B) For ratio  $\hat{R}$ :

$$M\hat{S}E(\hat{R}) = \frac{1}{(\hat{X})^2} \left[ \sum_s M\hat{S}E_s(\hat{R}) + \sum_{s'} M\hat{S}E_{s'}(\hat{R}) \right]$$

where  $s, s'$  indicate respectively the strata with PPSWR and SRSWOR selection at first stage.

a) For strata with PPSWR selection at first stage (i.e. for all rural strata except stratum 1):

$$M\hat{S}E_s(\hat{R}) = \frac{1}{n_s(n_s-1)} \sum_{i=1}^{n_s} \left[ \frac{Z_s}{z_{si}} (\hat{Y}_{si} - \hat{R}\hat{X}_{si}) - \frac{1}{n_s} \sum_{i=1}^{n_s} \frac{Z_s}{z_{si}} (\hat{Y}_{si} - \hat{R}\hat{X}_{si}) \right]^2$$

where

$$\hat{Y}_{si} = \sum_j \hat{Y}_{sij}, \quad \hat{X}_{si} = \sum_j \hat{X}_{sij},$$

$$\hat{Y}_{sij} = D_{si}^* \left[ \frac{H_{si1j}}{h_{si1j}} \sum_{k=1}^{h_{si1j}} y_{si1jk} + \frac{H_{si2j}}{h_{si2j}} \sum_{k=1}^{h_{si2j}} y_{si2jk} \right],$$

$$\hat{X}_{sij} = D_{si}^* \left[ \frac{H_{si1j}}{h_{si1j}} \sum_{k=1}^{h_{si1j}} x_{si1jk} + \frac{H_{si2j}}{h_{si2j}} \sum_{k=1}^{h_{si2j}} x_{si2jk} \right]$$

b) For strata with SRSWOR selection at first stage (i.e. for rural stratum 1):

$$MSE_{s'}(\hat{R}) = \frac{1}{4} \left[ (\hat{Y}_{s'1} - \hat{Y}_{s'2})^2 + \hat{R}^2 (\hat{X}_{s'1} - \hat{X}_{s'2})^2 - 2\hat{R}(\hat{Y}_{s'1} - \hat{Y}_{s'2})(\hat{X}_{s'1} - \hat{X}_{s'2}) \right]$$

C) Estimates of RSE:

$$RSE(\hat{Y}) = \frac{\sqrt{Var(\hat{Y})}}{\hat{Y}} \times 100$$

$$RSE(\hat{R}) = \frac{\sqrt{MSE(\hat{R})}}{\hat{R}} \times 100$$

## 11. Multipliers:

The formulae for multipliers for a sub-sample under Schedule 33 are given below:

stratum	formula for multipliers	
	hg 1	hg 2
rural stratum 1	$\frac{N_s}{n_{smj}} \times D_{smi}^* \times \frac{H_{smi1j}}{h_{smi1j}},$ j = 1, 2, 3, 4	$\frac{N_s}{n_{sm}} \times D_{smi}^* \times \frac{H_{smi2j}}{h_{smi2j}},$ j = 1, 2, 3, 4
all other rural strata	$\frac{Z_s}{n_{sm}} \times \frac{1}{z_{smi}} \times D_{smi}^* \times \frac{H_{smi1j}}{h_{smi1j}},$ j = 1, 2, 3, 4	$\frac{Z_s}{n_{sm}} \times \frac{1}{z_{smi}} \times D_{smi}^* \times \frac{H_{smi2j}}{h_{smi2j}},$ j = 1, 2, 3, 4

Note: (i) For estimating any characteristic for any domain not specifically considered in sample design, indicator variable is used.

(ii) Multipliers are computed on the basis of information available in the listing Schedule 0.0 irrespective of any misclassification observed between the listing schedule and the detailed enquiry schedule (i.e. Schedule 33).

## **12. Treatment for zero cases, casualty cases etc.:**

**12.1** While counting the number of FSUs surveyed ( $n_{sm}$ ) in a stratum, all the FSUs with survey codes 1 to 6 in Schedule 0.0 are considered. In addition, if no household is available in the frame then also that FSU is treated as surveyed. However, if the households of Schedule 33 are available in the frame of the FSU but none of these could be surveyed then that FSU has to be treated as casualty and it is not treated as surveyed.

**12.2** *Casualty cases:* FSUs with survey code 7 as per Schedule 0.0 are treated as casualties. In addition to this, an FSU, although surveyed, may have to be treated as casualty for Schedule 33 and a particular *second stage stratum* as given in the following paragraph:

**12.2.1** FSUs with survey codes 1 and 4 as per Schedule 0.0 having number of households in the frame of j-th second stage stratum greater than 0 but number of households surveyed according to data file, considering both hg together, as nil (i.e.  $H_{i1j} + H_{i2j} > 0$  but  $h_{i1j} + h_{i2j} = 0$ ) will be taken as casualties for j-th second stage stratum.

*All the FSUs with survey codes 1 to 6 as per Schedule 0.0 minus the number of casualties as identified above are taken as the number of surveyed FSUs ( $n_{smj}$ ) for that stratum  $\times$  second stage stratum.*

When casualty for j-th second stage stratum occurs for a particular hg but not for the other hg, the FSU is not treated as casualty but some adjustments in the value of H for the other hg are done as follows:

(i) Suppose for hg 1,  $H_{i1j} > 0$  but  $h_{i1j} = 0$  while for hg 2,  $H_{i2j} > 0$  and  $h_{i2j} > 0$ . In that case  $D_i^* \times H_{i2j}$  is replaced by  $H_{i1j} + D_i^* \times H_{i2j}$  in the formula for multiplier of segment 2.

(ii) Suppose for hg 1,  $H_{i1j} > 0$  and  $h_{i1j} > 0$  while for hg 2,  $H_{i2j} > 0$  but  $h_{i2j} = 0$ . In that case  $H_{i1j}$  is replaced by  $H_{i1j} + D_i^* \times H_{i2j}$  in the formula for multiplier of hg 1.

*It may be noted that  $n_{smj}$  is same for hg 1 & 2 of an FSU.*

## **13. Treatment in cases of void second-stage strata/ sub-strata/ strata/ NSS region at FSU or household level**

**13.1** A stratum may become void through all the FSUs belonging to the stratum being casualties. This may occur in one sub-sample or in both the sub-samples. If it relates to only one sub-sample, then estimate for the void stratum is replaced by the estimate as obtained from the other sub-sample for the same stratum.

**13.2** When a stratum is void in both the sub-samples, the following procedure is followed:

*Case(I): Stratum void cases at FSU level (i.e. all FSUs having survey code 7):*

- i) If a rural stratum, except stratum 1, is void then it is merged with a similar stratum within the same NSS region. However, if rural stratum 1 is void for any State/UT, it is not merged with other stratum.

- ii) If all the strata within an NSS region is void, it is excluded from the coverage of the survey. The state level estimates are based on the estimates of NSS regions for which estimates are available.

*Case (II): Stratum void case at second stage stratum level (i.e. all the FSUs are casualties for a particular second stage stratum):*

An FSU may be a casualty for a particular *second stage stratum* although the survey code is not 7. If all the FSUs of a stratum become casualties in this manner for a particular *second stage stratum*, the stratum will become void. The adjustment for this type of stratum void case is done according to the following guidelines.

The adjustment is made involving other strata (within NSS region) of the State/UT. Suppose A, B, C, and D are the four strata in the State/ UT/ region and stratum C is void for j-th *second stage stratum*. If  $\hat{Y}_{aj}$ ,  $\hat{Y}_{bj}$  and  $\hat{Y}_{dj}$  are the aggregate estimates for the strata A, B and D respectively, then the estimate  $\hat{Y}_{cj}$  for stratum C is obtained as  $\left( \frac{\hat{Y}_{aj} + \hat{Y}_{bj} + \hat{Y}_{dj}}{Z_a + Z_b + Z_d} \times Z_c \right)$ , where  $Z_a$ ,  $Z_b$ ,  $Z_c$  and  $Z_d$  are the sizes of strata A, B, C and D respectively.

### CODES FOR BLOCK 3

**item 4: household type:** *self-employed in non-agriculture*-1, *agricultural labour*-2, *other labour*-3, *self-employed in agriculture*-4, *others*-9.

**item 5: social group:** *scheduled tribe*-1, *scheduled caste*-2, *other backward class*-3, *others*-9.

**item 7: type of land owned:** *homestead only* - 1, *homestead and other land* - 2, *other land only* - 3.

**item 15: principal source of drinking water:** *tap* -1, *tubewell / handpump* -2, *well* -3, *tank/pond reserved for drinking* -4, *other tank/pond* -5, *river/canal/lake* -6, *spring*-7, *tanker* - 8, *others* -9.

**item 16: distance from the principal source of drinking water:** *within dwelling* -1, *outside dwelling but within premises* -2, *outside premises at a distance: < 0.2 km* - 3, *0.2 - 0.5 km* - 4, *0.5 - 1.0 km* - 5, *1.0 - 2.0 km* - 6, *2.0 km or more* - 7.

**item 17: principal source of income :** *cultivation* - 1, *farming other than cultivation* - 2, *other agricultural activity* - 3, *wage/salaried employment* - 4, *non-agricultural enterprises* - 5, *pension* - 6, *remittances* - 7, *interest and dividends* - 8, *others* - 9.

**item 19: treatment :** *sub-centre/dispensary* - 1, *primary health centre* - 2, *community health centre/government hospital* - 3, *private clinic/doctor* - 4, *traditional treatment* - 5, *other treatment* - 6, *no treatment* - 7.

**item 20 : reason :** *non-availability of medical facility* - 1, *financial constraint* - 2, *not required* - 3, *others (specify.....)* - 9.

## CODES FOR BLOCK 4

**Col. (3) : relation to head:** self-1, spouse of head-2, married child-3, spouse of married child-4, unmarried child-5, grandchild-6, father/mother/father-in-law/mother-in-law-7, brother/sister/brother-in-law/sister-in-law/other relatives-8, servants/employees/other non-relatives-9.

**Col.(6) : marital status code:** never married – 1, currently married – 2, widowed – 3, divorced/separated – 4.

**Col. (7) : general education code :** not literate - 01, literate without formal schooling - 02, literate but below primary - 03, primary - 04, middle - 05, secondary - 06, higher secondary - 07, diploma/certificate course - 08, graduate - 10, post graduate and above -11.

**cols. (10), (11), (12): nature of work** : working in cultivation: supervision - 01, ploughing -02, sowing -03, transplanting -04, weeding -05, harvesting -06, other cultivation activities - 07; manual work in other agricultural activities: forestry -08, plantation -10; working in : dairy -11, poultry -12, piggery -13, duckery -14, fishery -15, bee-keeping -16, others -99.

**Col.(13): status code:** worked in hh enterprise (self-employed): own account worker - 11, employer - 12, worked as helper in hh enterprise (unpaid family worker) - 21, worked as regular salaried/wage employee - 31, worked as casual wage labour: in public works - 41, in other types of work - 51, had work in hh enterprise but did not work due to: sickness - 61, other reasons - 62; had regular salaried/wage employment but did not work due to: sickness - 71, other reasons - 72; did not work but sought work - 81, did not seek but was available for work - 82, attended educational institution - 91, attended domestic duties only - 92, attended domestic duties and was also engaged in free collection of goods (vegetables, roots, firewood, cattle feed, etc.), sewing, tailoring, weaving, etc. for household use - 93, rentiers, pensioners, remittance recipients, etc. - 94, not able to work due to disability - 95, beggars, prostitutes - 96, others - 97, did not work due to temporary sickness (for casual workers only) - 98.

**[5] perception of household regarding sufficiency of food**

1. do all members of your household 'get enough food everyday'?			
(yes: every month of the year-1, some months of the year -2; no: no month of the year-3)			
2. if code is 2 in item 1, during which calendar months did any member of the household not 'get enough food everyday'? (applicable month codes may be recorded in the box spaces: Jan-01, Feb-02, Mar-03, Apr-04, May-05, Jun-06, Jul-07, Aug-08, Sep-09, Oct-10, Nov-11, Dec-12)			
3. whether information on item 1 was actually obtained from the informant? (yes-1, no-2)			

**[6] general awareness/perceptions and other aspects of farming**

1. are you aware of Minimum Support Price? (yes-1, no-2)	
2. if '1' in item 1, are you aware of procurement agency? (yes-1, no-2)	
3. did you have your crop insured at any time? (yes-1, no-2)	
4. if '2' in item 3, reason therefor (not aware -1, not interested-2, insurance facility not available-3, lack of resources for premium payment-4)	
5. services availed from cooperatives (not availed because of non-membership - 1, member but not availed – 2, availed for: credit - 3, seeds/fertilisers-4, agricultural implements-5, marketing-6, inputs-7, consumer goods-8)	
6. what is the usual source of your seeds? (farm saved - 1, exchange - 2, purchase - 3)	
7. how often do you replace seed varieties? (generally replacing every year-1, replacing every alternate year-2, replacing after three years-3, replacing after four years or more-4)	
8. whether any member of the household is a member of registered farmers organisation? (yes-1, no-2)	
9. whether any member of the household is a member of self help group? (yes - 1, no - 2)	
10. are you aware of bio-fertilisers? (yes - 1, no - 2)	
11. are you aware of World Trade Organisation (WTO)? (yes-1, no-2)	
12. do you like farming as a profession? (yes - 1, no - 2)	
13. if '2' in item 12, reasons therefor (not profitable - 1, lack of social status - 2, risky - 3, others (specify.....) - 9)	

## [7] particulars of land possessed during kharif

(in 0.000 ha)

sl. no.	crop/allied	owned and possessed	leased-in	otherwise possessed	total (3+4+5)
(1)	(2)	(3)	(4)	(5)	(6)
