Overview

ABSTRACT

The 42nd round Schedule 25.7 was devoted to an enquiry on 'Utilisation of Medical Services'. The objective was to make an assessment of the benefits derived by various sections of the society in the utilisation of Medical Services provided by the Government of India. As the largest share of expenditure on social services goes to the area of education and health care, this enquiry was devoted mainly to the collection of informations and extent of their utilisation of Medical Services. This survey was conducted during July 1986-June 1987.

In the absence of an electronic copy of 'manual of instructions to the field staff', more details could not be furnished.

KIND OF DATA

Sample survey data [ssd]

UNITS OF ANALYSIS

Randomly selected households based on sampling procedure

Scope

NOTES

The required particulars regarding the utilisation of medical services received by the households were collected in Schedule 25.7, from each sample household selected for this enquiry. In this schedule some general particulars such as age,sex,educational level attained,current enrolment status were collected for all household members. Particulars of medical treatment received as inpatient of a hospital during last 365 days were recorded. Also Particulars of ailments (without hospitalisation) and details of medical treatment during the last 30 days

In the absence of an electronic/hard copy of the manual of instructions to the field staff more details could not be provided

Sampling

Sampling Procedure

Basic sample design was stratified two stage with census villages and urban blocks as the first stage unit in rural and urban sectors respectively and house holds as the second stage units in both sectors. While the villages were selected with probability proportional to population with replacement, the sample blocks were selected by simple random sampling without replacement (both in the form of two independent sub samples). The households listed in the sample villages or block divided into two sub-strata; sub-stratum-1 consisting of households with one or more members enrolled at post-primary level, and sub-stratum- 2 of all the remaining households. These sample households were selected circular systematically with the random start from each sub-stratum (six households in all)

In the absence of an electronic/hard copy of the 'Sampling design and estimation procedure' details could not be provided

Deviations from Sample Design

There was no deviation from the original sampling design

Weighting

Sample weights were calculated and included in each of the data files
Multipliers for Sub-stratum -1, sub-stratum-2 and Combined have been computed and posted in the data.

Variable 'Wgt_SS-1' refers to Multiplier for each Sub-stratum 1.
Variable 'Wgt_SS-2' refers to Multiplier for each Sub-stratum 2.
Variable 'Wgt_Combined' refers to Combined Multiplier.

Directory file and its layout are in the External Resources.

Questionnaires

Overview

Schedule 25.7 consists of the following blocks:

Block 1: identification of sample household.

Block 2: particulars of field work.

Block 3: Household characteristics.

Block 5: Demographic particulars of household members.

Block 6: Particulars of medical treatment received as inpatient of a hospital during last 365 days.

Block 7: Particulars of ailments (without hospitalisation) and details of medical treatment during last 30 days.

Data Collection

Data Collection Dates

Start	End	Cycle
1986-07-01	1987-06-30	N/A

Data Collection Mode

Face-to-face [f2f]

Data Collection Notes

The information on the facilities available to the household members was collected from head of the household or more knowledgeable persons of the household.

Questionnaires

Schedule 25.7 consists of the following blocks:

Block 1: identification of sample household.

Block 2: particulars of field work.

Block 3: Household characteristics.

Data Processing

Data Editing

Data was collected as per the Questionnaire 25.7. For processing purposes, a flat file was created using the identification particulars from Block 1 and other common information posted in each record of the data along with the multiplier for estimation. Data editing, scrutiny and validation were carried out as per the scrutiny checks and corrected manually.

Other Processing

There are many fields in the data sets defined as alpha numeric but they are supposed to contain NUMERIC values as they are amount field. Some of their values as ALPHA such as "NL" or "xx" and signifies the code of employer etc. Therefore, while processing care should be taken to convert those fields for numeric values and interpret ALPHA in conjunction to the code provided in the next field.

Variable List

Identification and Household Characteristics Block 1 & 3)

Content	Identification and household characteristics (Block-1 & 3: Level-01) This data set is generated from Block 1 and Block 3 of the questionnaire and contains mainly Identification of sample household and household characteristics. Also, multipliers have been posted in each record for estimation. Common items in all the 4 data sets have been posted for generating tables. Primary key is Serial Number X House hold Number X sub stratum Number. For other blocks primary key is Serial Number X House hold Number X sub stratum Number X serial number of the case (like treatment or ailment etc.)
