Overview

ABSTRACT

The Ministry of Social Justice and Empowerment (MSJE) made a request for conducting a survey on disability in order to meet the data needs for evolving specific strategies and interventions during the 10th Five Year Plan. The need for a detailed survey on disability was strongly felt by MSJE since its data requirement included not only the number of disabled persons, but also the socio-economic characteristics of the disabled persons such as their age structure, literacy, vocational training, employment, causative factors of disability, age at the onset of disability etc.

This survey of disabled persons covered persons with mental disability apart from the physically disabled persons. The decision to include mental disability in the survey has been taken on the basis of a pre-test of the questions on mental disability, both for the listing and detailed schedules, carried out in the four cities of Kolkata, Mumbai, Hyderabad and Delhi. And the information for different types of disabilities has been collected for persons of all age-groups.

KIND OF DATA

Sample survey data [ssd]

UNITS OF ANALYSIS

Randomly selected households based on sampling procedure and members of the household

Scope

NOTES

The schedule on Survey of Disabled Persons (Schedule 26) consists of the following 9 blocks:

Block 0: descriptive identification of sample household

Block 1: identification of sample household

Block 2: particulars of field operation

Block 3: household characteristics

Block 4: demographic and other particulars of household members

Block 5: particulars of disability of the disabled member

Block 6: particulars of enrolment of disabled persons of age 5-18 years

Block 7: remarks by investigator

Block 8: comments by supervisory officer(s)

The identification particulars of the sample village/block and the sample household in which the survey schedule have been canvassed are to be recorded in blocks 0 & 1.

Block 2 is meant for recording the particulars of field operations.

Certain characteristics of the sample household, such as, size, social-group, principal occupation, etc., meant to be used as classificatory variables have been recorded in block 3.

The demographic particulars like age, sex and marital status, of all the normally resident members of the sample household and the particulars of degree of disability, blood relationship between parents, living arrangement, general education, etc. of all disabled members have been recorded in block 4.

Block 5 is meant for recording for each disabled member the detailed particulars of disability, such as, type of disability, degree of each type of disability, cause of disability, age at onset of disability, type of aid/appliance acquired etc.

The information as to whether or not a disabled child in the age-group 5-18 years was ever enrolled in a ordinary school/special school, whether the child is continuing in that school or not, reason for non-enrolment/discontinuation, etc., have been recorded in block 6.

Any relevant remarks of the investigator will be recorded in block 7.

The comments by the supervisory officer(s) in block 8.

Coverage

GEOGRAPHIC COVERAGE

The survey covered the whole of the Indian Union except (i) Leh and Kargil districts of Jammu & Kashmir, (ii) interior villages of Nagaland situated beyond five kilometres of the bus route and (iii) villages in Andaman and Nicobar Islands which remain inaccessible throughout the year.

UNIVERSE

The survey used the interview method of data collection from a sample of randomly selected households and members of the household.

Sampling

Deviations from Sample Design

There was no deviation from the original sampling design.

Weighting

Two different weights have been provided in each file in the data set. Details are as follows:-

1. Weight for each sub sample is stored in the variable name : Wgt_SubSample
2. Combined subsample weight is stored in the variable name : Wgt_Combined

Description

An important feature of the NSS sampling design is that the total sample of first stage units is drawn in the form of two or more independent and parallel samples, termed as interpenetrating sub-samples. Each sub-sample is drawn by the same sampling scheme and is capable of providing valid estimates of the population parameters. The comparison of sub-sample wise estimates shows the margin of uncertainty associated with the combined sample estimate.

Interpenetrating sub-samples have been used in NSS (i) to obtain valid estimates from each sub-round (season) of the survey round, and (ii) to ensure that Central and State samples for any State/ UT cover independent and equally valid samples of units.

The samples surveyed by the NSSO staff are termed as Central sample and the matched samples surveyed by State Government staff are termed as State sample.

General education of the principal earner (B3_q4)

File: Blocks 1,3_Household characteristics

Principal earner of the household is that person among the household members who had the highest earnings during the 365 days preceding the date of survey from any type of activity economic or non-economic. Information regarding the general educational level attained by the principal earner will be recorded against this item in terms of the specified codes. For the purpose of making entries, only the course successfully completed will be considered. For instance, a person who had studied up to say, first year B.A., his educational attainment will only be higher secondary. The codes to be used are:

not literate	01
literate without formal schooling	02
literate but below primary	03
primary	04
middle	05
secondary	06
higher secondary	07
diploma / certificate course	08
graduate	10
post graduate and above	11

A person who can both read and write a simple message with understanding in at least one language is to be considered as literate. Those who are not able to do so, are to be considered not literate and will be assigned code 01. Those who are literate but never attended any school will be given code 02. Those who are, by definition literate but are yet to pass a primary standard examination will be assigned code 03. Codes 04, 05, 06 and 07 will indicate the successive higher standards of examinations passed. Criteria for deciding primary, middle, secondary etc. will depend on the pattern followed in the concerned state or union territory. Persons who have attained proficiency in Oriental languages (e.g. Sanskrit, Persian etc.) through formal but not the general type of education will be classified appropriately at the equivalent level of general education standard.

Description

An important feature of the NSS sampling design is that the total sample of first stage units is drawn in the form of two or more independent and parallel samples, termed as interpenetrating sub-samples. Each sub-sample is drawn by the same sampling scheme and is capable of providing valid estimates of the population parameters. The comparison of sub-sample wise estimates shows the margin of uncertainty associated with the combined sample estimate.

Interpenetrating sub-samples have been used in NSS (i) to obtain valid estimates from each sub-round (season) of the survey round, and (ii) to ensure that Central and State samples for any State/ UT cover independent and equally valid samples of units.

The samples surveyed by the NSSO staff are termed as Central sample and the matched samples surveyed by State Government staff are termed as State sample.

Description

Economic activity:

Any activity resulting in production of goods and services that adds value to national product was considered as economic activity. Such activities included production of all goods and services for market i.e. production for pay or profit and the production of primary commodities for own consumption and own account production of fixed assets, among the nonmarket activities. The entire spectrum of human activity falls into two categories viz. economic and non-economic activities. The economic activities have two parts - market activities and non-market activities. Market activities are those that involve remuneration to those who perform it i.e., activity performed for pay or profit. These are essentially production of goods and services for the market including those of government services etc. Non-market activities are the production for own

consumption of primary products including own account processing of primary products and own account production of fixed assets. However the whole spectrum of economic activities as defined in the UN System of National Accounts (SNA) was not covered under 'economic activity' in the 58th round. The term "economic activity" included:

(i) all the market activities described above i.e. the activities performed for pay or profit, and

(ii) of the non- market activities:

(a) all the activities relating to agricultural sector which result in production (including gathering of uncultivated crops, forestry, collection of firewood, hunting, fishing etc.) of agricultural produce for own consumption and

(b) the activities relating to the own-account production of fixed assets. Own account production of fixed assets includes construction of own houses, roads, wells etc., and of machinery, tools etc. for household enterprise and also construction of any private or community facilities free of charge. A person may be engaged in own account construction either in the capacity of a labourer or a supervisor.

Loss / change of work (B4_q17)

File: Block 4_Demographic and other particulars of household members

Columns 16 & 17: 'whether working before the onset of disability' and 'if working before the onset of disability, whether disability caused loss or change of work?': The purpose of these items is to ascertain whether the disabled members who were working prior to the onset of disability had loss or change of work due to the onset of disability. In the case of persons having multiple disabilities, work status at the onset of each of the multiple disabilities will have to be determined separately and if the person is reported to be working at the onset of at least one of the multiple disabilities, code 1 will be recorded in column 16. For those who have disability since birth, and for children of age 0-4 years, code 2 will be recorded in column 16. Column 17 will be filled-in only for those who were working at the onset of disability (i.e. for those with code 1 in column 16). The codes to be used for recording entry in column 17 are:

loss of work 1
 change of work 2
 no loss or no change of work 3

For persons having only one disability and working at the onset of disability, no difficulty will arise in ascertaining whether the disability caused loss of work or change of work. For persons having two or more disabilities and working at the onset of each of the disabilities, all the three situations - loss of work, change of work and no loss or no change of work - may occur. In such cases, code 1 will get priority over codes 2 & 3 and code 2 over code 3. For self-employed persons, code 1 will be entered only if he/she lost the job due to the onset of disability. The 'change of work' will relate to any kind of change of type/nature of work. If the onset of disability did not cause loss or change of work, code 3 will be recorded in column 17.

Description

An important feature of the NSS sampling design is that the total sample of first stage units is drawn in the form of two or more independent and parallel samples, termed as interpenetrating sub-samples. Each sub-sample is drawn by the same sampling scheme and is capable of providing valid estimates of the population parameters. The comparison of sub-sample wise estimates shows the margin of uncertainty associated with the combined sample estimate.

Interpenetrating sub-samples have been used in NSS (i) to obtain valid estimates from each sub-round (season) of the survey round, and (ii) to ensure that Central and State samples for any State/ UT cover independent and equally valid samples of units.

The samples surveyed by the NSSO staff are termed as Central sample and the matched samples surveyed by State Government staff are termed as State sample.

Interviewer instructions

A disabled member of the household may have one or more than one type of disability. If he/she is having only one type of disability, serial number 1 will be recorded in this column against the type of disability that the person has. If a disabled member is having more than one type of disability, continuous serial numbers starting from 1 will be recorded in the relevant rows in the ascending order, one each against the type of disability the person is having. Thus, for a person with visual and one locomotor disability, entry in col. 4 against row 'Visual' will be 1 and against the row 'Locomotor1' will be 2. For the second disabled person of the household serial numbering will start again from 1 for the first type of disability of that person.

Late in sitting, walking, talking etc. (B5_q8)

File: Block 5_Particulars of physical disability of the disabled member

If having mental disability, was he/she late in sitting, walking or talking in childhood as compared to other children?

Interviewer instructions

The information under this column is to be recorded for persons reporting mental disability. For such persons it is to be ascertained whether he/she was late in sitting, walking or talking in childhood as compared to other children. The 'normal time' for attaining the milestone after birth in the case of 'sitting' is 'before 1 year', for 'walking' it is 'before 2 years' and for 'talking' it is 'before 3 years'. If the disabled person had performed these activities after the stipulated time given for each such activity, he/she would be considered as 'late' for that activity. The detailed codes are:

yes:

sitting 1
 walking 2
 talking 3
 any combination of codes 1 to 3... 4
 cannot recall / not known 5
 no 6

Code 1, 2, 3 or 4 is to be recorded if the reply is in affirmative for late in sitting, walking, talking or any combination of them, respectively. If the respondent cannot recall or does not know the time of attainment of these milestones by the disabled member, code 5 is to be recorded. Code 6 will be recorded if the disabled member was not late in attaining these developmental milestones.

 other eye diseases 07 not known 16

The code for 'old age' is to be given only if it is reported so by the respondent and no other code among 01 to 08 or 12 to 14 is applicable.

Causes of hearing disability are:

German measles/rubella 01 injury other than burns 13
 noise induced hearing loss 02 medical/surgical intervention 14
 ear discharge 03 old age 15
 other illness 04 other reasons 99
 burns 12 not known 16

The code for 'old age' is to be given only if it is reported so by the respondent and no other code 01 to 04 or 12 to 14 is applicable.

Causes of speech disability are:

hearing impairment 01 burns 12
 voice disorder 02 injury other than burns 13
 cleft palate/lip 03 medical/surgical intervention..... 14
 paralysis 04 old age 15
 mental illness / retardation 05 other reasons 99
 other illness 06 not known 16

The code for 'old age' is to be given only if it is reported so by the respondent and no other code 01 to 06 or 12 to 14 is applicable.

Causes of locomotor disability are:

cerebral palsy 01 tuberculosis 10
 polio 02 other illness 11
 leprosy cured 03 burns 12
 leprosy not cured 04 injury other than burns 13
 stroke 05 medical/surgical intervention 14
 arthritis 06 old age 15
 cardio-respiratory disease 07 other reasons 99
 cancer 08 not known 16

The code for 'old age' is to be given only if it is reported so by the respondent and no other code 01 to 08 or 10 to 14 is applicable.

Reason for not acquiring (B5_q18)

File: Block 5_Particulars of physical disability of the disabled member

Type: Discrete
Format: character
Width: 1

Valid cases: 4562
Invalid: 0

Literal question

If the aid/appliance was advised to the disabled member of the household and still it has not been acquired, then what was the reason behind it?

Interviewer instructions

Column 18: if code 2 in col. 13, reason for not acquiring aid/appliance: For each physical disability of the member for which aid/appliance was advised but was not acquired (i.e. for the disabilities with code 2 in col. 13), reason for not acquiring the aid/appliance by the disabled member is to be recorded in this column. The codes to be used are:

not available 1
expensive 2
not necessary for:
economic independence 3
personal independence 4
others 9

'Economic independence' means that the disabled person does not face any difficulty in pursuing his/her livelihood. When the disabled person does not need any help from others for his daily chores he/she is considered to have 'personal independence'.

Description

An important feature of the NSS sampling design is that the total sample of first stage units is drawn in the form of two or more independent and parallel samples, termed as interpenetrating sub-samples. Each sub-sample is drawn by the same sampling scheme and is capable of providing valid estimates of the population parameters. The comparison of sub-sample wise estimates shows the margin of uncertainty associated with the combined sample estimate.

Interpenetrating sub-samples have been used in NSS (i) to obtain valid estimates from each sub-round (season) of the survey round, and (ii) to ensure that Central and State samples for any State/ UT cover independent and equally valid samples of units.

The samples surveyed by the NSSO staff are termed as Central sample and the matched samples surveyed by State Government staff are termed as State sample.
