Overview

ABSTRACT
The National Sample Survey Organisation (NSSO) has been set up by the Government of India in 1950 to collect socio-economic data employing scientific sampling methods. The NSSO conducts regular consumer expenditure surveys as part of its "rounds", each round being normally of a year's duration and covering more than one subject of study. The surveys are conducted through household interviews, using a random sample of households covering practically the entire geographical area of the country. Surveys on consumer expenditure are being conducted quinquennially on a large sample of households from the 27th round (October 1972 - September 1973) onwards. The fourth quinquennial survey on household consumer expenditure was carried out during July 1987 - June 1988. The three previous surveys of this series were carries out in the 27th (October-September 1973) , the 32nd (July 1977 to June 1978) and the 38th (January to December , 1983) rounds of the NSSO. The present survey like the previous one, covered the entire population. Expenditure incurred by the sample household for the purpose of domestic consumption were collected for the 30 days preceding the date of survey. No account has, however, been taken of any expenditure incurred towards the productive enterprises of the household. It may be mentioned here that in order to get more households of the upper income bracket in the Sample , significant changes have been made in the sample design in this round (compared to the design of the 38th round). The survey covered the whole of Indian Union excepting

i) Ladakh and Kargil districts of Jammu & Kashmir

ii) Rural areas of Nagaland

The field work for the survey was conducted, as usual, by the Field Operations Division of the Organisation. The collected data were processed by the Data Processing Division of NSSO and tabulated by the Computer Centre of Department of Statistics. The reports have been prepared by Survey Design & Research Division (SDRD) of NSSO under the guidance of the Governing Council, NSSO.

KIND OF DATA
Sample survey data [ssd]

UNITS OF ANALYSIS
Randomly selected households based on sampling procedure and members of the household

Scope

NOTES
The NSSO surveys on consumer expenditure aim to measure the household consumer expenditure in quantitative terms disaggregated by various household characteristics.

The data for this survey is collected in the NSS Schedule 1.0 used for household consumer expenditure. For this round, the schedule had 11 blocks.

Blocks 1 and 2 - are similar to the ones used in usual NSS rounds. These are used to record identification of sample households and particulars of field operations.

Block-3: Household characteristics like, household size, principal industry-occupation, social group, land possessed and cultivated, type of dwelling etc. are recorded in this block.

Block-4: In this block the detailed demographic particulars including age, sex, educational level, marital status, number of meals usually taken in a day etc. are recorded.

Block-5: In this block cash purchase and consumption of food, pan, tobacco, intoxicants and fuel & light during the last 30 days are recorded.

Block-6: Consumption of clothing during the last 30 and 365 days is recorded in this block.

Block-7: Consumption of footwear during the last 30 and 365 days is recorded in this block.

Block-8 : Expenditure on miscellaneous goods and services and rents and taxes during the last 30 days has been recorded in this block.

Block-9 : Expenditure for purchase and construction (including repairs) of durable goods for domestic use is recorded here.

Block-10 : Particulars of dwelling units are recorded in this block.

Block-11 : Summary of consumer expenditure during last 30 days is recorded in this block.

Coverage

GEOGRAPHIC COVERAGE
The survey covered the whole of Indian Union excepting

i) Ladakh and Kargil districts of Jammu & Kashmir

ii) Rural areas of Nagaland

UNIVERSE
The survey used the interview method of data collection from a sample of randomly selected households and members of the household.

Sampling

Sampling Procedure

The survey will have a two-stage stratified design. The first stage units (f.s.u.s) or villages in the rural sector and urban blocks in the urban sector. The second stage units are households in both the sectors.

Sampling frame for f.s.u.'s : The lists of 1981 census villages constitute the sampling frame for rural sector in most districts. But the 1981 census frame could not be used for a few districts because, either the 1981 census was not held there or the list of 1981 census villages could not be obtained or the lists obtained from the census authorities were found to be grossly incomplete. In such cases 1971 census frame have been used. In the urban sector , the Urban Frame Survey (U.F.S.) blocks constitute the sampling frame.

Stratification : States are first divided into agro-economic regions which are groups of contiguous districts , similar with respect to population density and crop pattern. In Gujarat, however, some districts have been split for the purpose of region formation In consideration of the location of dry areas and the distribution of the tribal population in the state.

RURAL SECTOR: In the rural sector, within each region, each district with 1981 Census rural population less 1.8 million forms a single stratum. Districts with larger population were divided into two or more strata, depending on population, by grouping contiguous tehsils similar, as for as possible, in respect of rural population Density and crop pattern. (In Gujarat, however, in the case of districts extending over more than one region, even if the rural population was less than 1.8 million, the portion of a district falling in each region constituted a separate stratum. Further, in Assam the old "basic strata" formed on the basis of 1971 census rural population exactly in the above manner, but with cut-off population as 1.5 million have been retained as the strata for rural sampling).

URBAN SECTOR : In the urban sector , strata are formed , again within NSS region , on the basis of the population size class of towns . Each city with population 10 lakhs or more is self-representative, as in the earlier rounds. For the purpose of stratification, in towns with 1981 census population 4 lakhs or more , the blocks have been divided into two categories, viz . - One consisting of blocks in areas inhabited by the relatively affluent section of the population and the other consisting of the remaining blocks.

Allocation for first stage units : The total all-India sample size has been allocated to the states /U.T.'s proportionate to the strength of central field staff. This was allocated to the rural and urban sectors considering the relative size of the rural and urban population. Now the rural samples were allocated to the rural strata in proportion to rural population. The urban samples were allocated to the urban strata in proportion to urban population with double weight age given to those strata of towns with population 4 lakhs or more which lie in area inhabited by the relatively affluent section.

Selection of f.s.u.'s : The sample villages have been selected circular systematically with probability proportional to population in the form of two independent interpenetrating sub-samples (IPNS) . The sample blocks have been selected circular systematically with equal probability, also in the form of two IPNS's.

Sample size (central sample) : The all India sample in respect of the central sample consists of 8518 villages and 4648 blocks.

Sample size (state sample) : All the states and Union Territories except Andaman & Nicobar Islands, Chandigarh , Dadra & Nagar Haveli and Lakshadweep are participating in this round at least on an equal matching basis.

Deviations from Sample Design

There was no deviation from the original sampling design.

Weighting

One weight, i.e., Multiplier has been provided in each file in the data set.

Questionnaires

Overview

The NSSO surveys on consumer expenditure aim to measure the household consumer expenditure in quantitative terms disaggregated by various household characteristics.

The data for this survey is collected in the NSS Schedule 1.0 used for household consumer expenditure. For this round, the schedule had 11 blocks.

Blocks 1 and 2 - are similar to the ones used in usual NSS rounds. These are used to record identification of sample households and particulars of field operations.

Block-3: Household characteristics like, household size, principal industry-occupation, social group, land possessed and cultivated, type of dwelling etc. are recorded in this block.

Block-4: In this block the detailed demographic particulars including age, sex, educational level, marital status, number of meals usually taken in a day etc. are recorded.

Block-5: In this block cash purchase and consumption of food, pan, tobacco, intoxicants and fuel & light during the last 30 days are recorded.

Block-6: Consumption of clothing during the last 30 and 365 days is recorded in this block.

Block-7: Consumption of footwear during the last 30 and 365 days is recorded in this block.

Block-8 : Expenditure on miscellaneous goods and services and rents and taxes during the last 30 days has been recorded in this block.

Block-9 : Expenditure for purchase and construction (including repairs) of durable goods for domestic use is recorded here.

Block-10 : Particulars of dwelling units are recorded in this block.

Block-11 : Summary of consumer expenditure during last 30 days is recorded in this block.

Description

Within each district of a State/ UT, two basic strata were formed:
(i) rural stratum comprising of all rural areas of the district and (ii) urban stratum comprising of all the urban areas of the district.

Literal question

Stratum

Sub Sample (SubSample)
File: Blocks 1,3 and 10 - Household Characteristics

Overview

Type: Discrete
Format: character
Width: 1

Valid cases: 128019
Invalid: 0

Description

An important feature of the NSS sampling design is that the total sample of first stage units is drawn in the form of two or more independent and parallel samples, termed as interpenetrating sub-samples. Each sub- sample is drawn by the same sampling scheme and is capable of providing valid estimates of the population parameters. The comparison of sub-sample wise estimates shows the margin of uncertainty associated with the combined sample estimate.

Interpenetrating sub-samples have been used in NSS (i) to obtain valid estimates from each sub-round (season) of the survey round, and (ii) to ensure that Central and State samples for any State/ UT cover independent and equally valid samples of units.

The samples surveyed by the NSSO staff are termed as Central sample and the matched samples surveyed by State Government staff are termed as State sample.

Survey Code (Survey_Code)
File: Blocks 1,3 and 10 - Household Characteristics

Literal question

Survey Code

Interviewer instructions

Survey code : Whether the originally selected sample household has been surveyed or a substituted household has been surveyed will be indicated against this item by recording '1' if it is the originally selected sample household, and '2' if it is the substituted one. If neither the originally selected household nor the substituted household could be surveyed i.e., if the sample household was a casualty, code '3' would be recorded. In such cases only blocks 0,1, 2, 13 and 14 will be filled up and on the top of the front page of the schedule the word 'CASUALTY' will be written and underlined.

Reason for substitution (Substn_Code)

Literal question

Reason for substitution

Interviewer instructions

Reason for substitution : For the originally selected sample household which could not be surveyed, the reason for its becoming a casualty will be recorded against this item in terms of the specified codes.

Household size (B3_1_q1)
File: Blocks 1,3 and 10 - Household Characteristics

Overview

Type: Continuous
Format: numeric
Width: 2
Decimals: 0

Valid cases: 128019
Invalid: 0

Description

Household :

A group of persons normally living together and taking food from a common kitchen constitutes a household. The word "normally" means that temporary visitors are excluded but temporary stay-aways are included.Thus a son or daughter residing in a hostel for studies is excluded from the household of his/her parents, but a resident employee or resident domestic servant or paying guest (but not just a tenant in the house) is included in the employer/host's household. "Living together" is usually given more importance than "sharing food from a common kitchen" in drawing the boundaries of a household in case the two criteria are in conflict; however, in the special case of a person taking food with his family but sleeping elsewhere (say in a shop or a different house) due to space shortage, the household formed by such a person's family members is taken to include the person also. Each inmate of a mess, hotel, boarding and lodging house, hostel, etc. is considered as a single-member household except that a family living in a hotel (say) is considered as one household only; the same applies to residential staff of such establishments.

Literal question

Total members in the household?

Interviewer instructions

The size of the sample household i.e., the total number of persons normally residing together (i.e., under the same roof) and taking food from the same kitchen (including temporary stayaways and excluding temporary visitors) will be recorded against this item. This number will be same as the last serial number recorded in column 1 of block 4.

Principle Industry Code (B3_1_q2a)
File: Blocks 1,3 and 10 - Household Characteristics

Overview

Type: Discrete
Format: character
Width: 3

Valid cases: 122332
Invalid: 0

Literal question

Which industry are you working in?

Interviewer instructions

The description of the principal household industry-occupation will be recorded in the space provided. The right hand side of item 2 has been divided into two lines. The appropriate three digited industry code of the NIC 1970 will be recorded in the first line and the relevant occupation family of the NCO 1968 will be entered in the second line.

To determine the principal household industry-occupation, the general procedure to be followed is to list all the gainful occupations pursued by the members of the household excluding those employed by the household and paying guests (who in view of their staying and taking food in the household are considered as its normal members) during the one year period preceding the date of survey, no matter whether such occupations are pursued by the members in their principal or subsidiary (on the basis of earnings) capacity. Out of the occupations listed, that one which fetched the maximum earnings to the household during the last 365 days preceding the date of survey would be considered as the principal household occupation. It is quite possible that the household occupation, thus determined as the principal one, may
be pursued in different industries by one or more members of the household. In such cases, the particular industry out of all the different industries corresponding to the principal occupation, which fetched the maximum earnings, should be considered as the principal industry of the household . In extreme cases, the earnings may be equal in two different occupations or industry- occupation combinations. By convention, in such cases, priority will be given to the occupation or industry-occupation combination of the senior most among the participating members. For households deriving income from non-gainful activities only, a dash (-) may be put against this item.

Principle Occupation Code (B3_1_q2b)

Overview

Type: Discrete
Format: character
Width: 1

Valid cases: 128019
Invalid: 0

Literal question

Household Type Code

Interviewer instructions

The household type code based on the means of livelihood of a household will be decided on the basis of the source of the household's income during the 365 days preceding the date of survey. For this purpose, only the household's income (net income and not gross income) from gainful employment will be considered; but the incomes of servants and paying guests will not be taken into account.

Whether any ceremony performed by the household during last month (B3_3_q1)
File: Blocks 1,3 and 10 - Household Characteristics

Overview	

Type: Discrete
Format: character
Width: 1

Valid cases: 128019
Invalid: 0

Literal question

Whether any ceremony performed by the household during last month

Interviewer instructions

Ceremonies are performed to solemnize some events of life, birth, annarmbha ,birthday marriage etc. Member of a household may have to perform some religious rites consequent upon the death of a person. For various religious faiths, there are some days in a year which are observed with ceremonial performances like offering puja, prayer, ritual performances etc. Such ceremonies may be performed by household members as required under the social/religious custom and not incurring expenditure for entertaining guests. On the other hand, some households may spend some amount of money for entertaining guests with meals which are considered as essential part of the ceremonies performed by them. The purpose of providing this block in this schedule is to estimate the meals served to guest on ceremonies performed by the household during the last 30 days preceding the date of enquiry as also the meals served to guests and employees (non-members only) on any other occasion(other than ceremonies). Hence, only these ceremonies on which guests were entertained with meals, should be listed here.

Description

A 'Meal' is composed of one of more readily cat able (generally cooked) items of food, the usual major constituent of which is cereal food. The meals consumed by a person twice or thrice a day provide him/her the required energy of (calorie) and other nutrients for living and for pursuing his/her normal avocations. A 'meal' as opposed to 'snacks ' as opposed to 'snacks', 'nasta' or 'high tea' , contains larger quantum and variety of food. In rare cases, a full meal may contain larger quantity of non-cereal food. Even that, if the total quantum of food in plate is heavy as a meal, the contents of the food plate will also be considered as a real. Sometimes the contents of a 'nasta' may not be very different from the contents of a 'meal'. The difference in quantity will there be the guiding factor for deciding whether the plate is to be led as a 'meal ' or a nasta..

Dwelling unit code (B10_q1)

File: Blocks 1,3 and 10 - Household Characteristics

Overview

Type: Discrete
Format: character
Width: 1

Valid cases: 128019
Invalid: 0

Description

This item refers only to the dwelling unit or the actual residence of the sample household. The dwelling unit may be an entire structure or may be only a part of a structure.

Dwelling unit code (B10_q1)
File: Blocks 1,3 and 10 - Household Characteristics

Literal question

Do you own the dwelling unit? Or is it hired or otherwise occupied?

Covered Area (sq. meter) (B10_q2)
File: Blocks 1,3 and 10 - Household Characteristics

Overview

Type: Continuous
Format: numeric
Width: 5
Decimals: 0

Valid cases: 128019
Invalid: 0

Literal question

How much is the covered area of the dwelling?

Interviewer instructions

This will be the sum of the floor areas of all rooms, kitchen etc. and covered and / or uncovered verandah of the building . The area will be recorded in nearest of sq.m. The verandah will mean the space adjacent to the rooms)both living and other) which is used as an access the rooms of the dwelling unit. Verandah will not, however, cover a passage or a corridor used mainly as an access to the dwelling unit itself. A verandah covered on four sides by walls with a roof above, is a covered verandah. But the verandah not supported by walls on four sides is an uncovered verandah, irrespective of whether there is a roof or not.

Land Possession Code (B10_q3)
File: Blocks 1,3 and 10 - Household Characteristics

Overview

Type: Discrete
Format: character

Valid cases: 128019
Invalid: 0

Literal question

Land Possession Code

Interviewer instructions

The land on which the residential building is constructed may be either owned, or rented or leased in or otherwise occupied Land leased in for 30 years or more will be classifies as owned. In case of multistoried buildings if an apartment is owned and occupied by the household, land possessed code in that case will also be '1' i.e. owned.

Plinth level (B10_q4)
File: Blocks 1,3 and 10 - Household Characteristics

Overview

Type: Discrete
Format: character
Width: 1

Valid cases: 128019
Invalid: 0

Literal question

Plinth level

Interviewer instructions

Plinth level means the constructed ground floor level of the house from the ground at the main entrance of the dwelling unit. If there is a basement that is, some floor area below the ground level, then code 1 will be recorded. In case there is no distinction between level of the ground (i.e. land) and the level of the lowest floor then the plinth level will be 0.00 metre and code 2 will be recorded against this item. If the level of the lowest floor is higher than that of the ground (land) i.e., more than 0.00 metre then 3 will be recorded. Here ' plinth' refers to the foundation base of a house.

Type of Dwelling (B10_q5)
File: Blocks 1,3 and 10 - Household Characteristics

Monthly rent (actual of imputed for urban only)

Monthly rent (actual of imputed for urban only) (B10_q8)
File: Blocks 1,3 and 10 - Household Characteristics

Interviewer instructions

The information will be collected for households of urban areas only. Actual monthly rent of the dwelling unit will be noted if it is taken on rent. But if a household in urban areas is not residing in a rented house that is, residing in a house which is either owned or otherwise occupied without paying any rent, than the rent will be imputed considering as if it was taken on rent. Imputation will be done on the basis of prevailing rate of rent for similar house in the locality or surrounding areas. It may be mentioned in this connection that, rent does not include any salami/pugree or any kind of cess payable to local self-government or to government. It is merely an amount payable to the owner or to some other party as per contract between the occupier and the persons who lets it out. A household may occupy a dwelling unit which is neither owned nor hired in. In such cases also the imputed rent will be recorded.

Condition of the house code (B10_q9)

Literal question

Condition of the house code

Interviewer instructions

Against this item is to be recorded the physical condition of the house in the sense whether the house is excellent for habitation and needs no immediate repairs, good and needs no major repairs; bad and needs immediate major repairs or structural changes. Major repairs will constitute such essential repairs of the house without which the house is risky or very unhealthy for human habitation. The entries are to be made in code numbers given in the schedule. The condition of the house will have to be assessed at the time of investigation and the appropriate code will be recorded here.

Format: character	Invalid: 0
Width: 2	

Description	

Monthly Per Capita Expenditure Code (MPCE_Code)
File: Blocks 1,3 and 10 - Household Characteristics

Household consumer expenditure :
The expenditure incurred by a household on domestic consumption during the reference period is the household's consumer expenditure. The household consumer expenditure is the total of the monetary values of consumption of various groups of items namely (i) food, pan (betel leaves), tobacco, intoxicants and fuel & light, (ii) clothing and footwear and (iii) miscellaneous goods and services and durable articles.

Monthly per capita expenditure (MPCE) :
For a household, this is household consumer expenditure over a period of 30 days divided by household size. A person's MPCE is understood as that of the household to which he/she belongs.

Days Stayed away (B4_q8)
File: Block 4 - Person records

Literal question

Days Stayed away

Interviewer instructions

The number of days for which the member 'saved away from 'home' during the 30 days preceding the data of enquiry should be recorded here. A continuous from home for 24 hours will, be recorded as a 'day stayed away' That is, the entry will be made in completed number of days and any fraction of a day will be ignored. The location of the place where the person stayed, having been away from his/her own household, may also be within the same village/town and staying away will not only mean physical absence but also non-participation in feed consultation from his/her own household.

No. of Meals per day (B4_q9)
File: Block 4 - Person records

Overview

Type: Continuous
Format: numeric
Width: 1
Decimals: 0
Range: 0-3

Valid cases: 659466
Invalid: 0

Description

Meal
A 'Meal' is composed of one of more readily cat able (generally cooked) items of food, the usual major constituent of which is cereal food. The meals consumed by a person twice or thrice a day provide him/her the required energy of (calorie) and other nutrients for living and for pursuing his/her normal avocations. A 'meal' as opposed to 'snacks ' as opposed to 'snacks', 'nasta' or 'high tea' , contains larger quantum and variety of food. In rare cases, a full meal may contain larger quantity of non-cereal food. Even that, if the total quantum of food in plate is heavy as a meal, the contents of the food plate will also be considered as a real. Sometimes the contents of a 'nasta' may not be very different from the contents of a 'meal'. The difference in quantity will there be the guiding factor for deciding whether the plate is to be led as a 'meal ' or a nasta.

Literal question

No. of Meals per day

Interviewer instructions

Number of meals usually taken in a day : The number of meals * consumed by a person is usually reported as 2 or 3. In rare cases one may come a cross a person who may be taking food only once in a day or more than three times a day. While in the former case the number of meals for the person will be 1 per day, in the latter case, however, only 3 should be entered. That is, in this column, the recorded number of meals taken in a day, even if it is reported to be higher, should not exceed 3. Abreast fed baby does not directly share the food consumed by members of the household. Hence for such babies the entry in this column will be 'o'.

Width: 9	Minimum: 0
Decimals: 2	Maximum: 888888
Range: 0-888888	Mean: 6.2
	Standard deviation: 664

Literal question

How much quantity of the home grown item was consumed by the household in the last 30 days?

Interviewer instructions

Consumption of any of the items in the blocks, made out of home grown/produced stock i.e. out of goods produced by the household in its own farm or manufacturing establishments, during the last 30 Days will be recorded here. The quantity of an item consumed out of home-grown will be recorded in column (6) and its value will be shown in column (7). The value will be imputed at the ex-farm or ex-factory price. Home produced agricultural produced include any produce obtained from cultivation by household or obtained in the form of rent-share of land leased out. Produce brought from village home and consumed in urban residence will also be treated as 'home-grown stock.

Sub Sample (SubSample)
File: Block 6pt1 - Monthly household expenditure on clothing, bedding etc

Overview	
Type: Discrete	Valid cases: 83454
Format: character	Invalid: 0
Width: 1	

Description

An important feature of the NSS sampling design is that the total sample of first stage units is drawn in the form of two or more independent and parallel samples, termed as interpenetrating sub-samples. Each sub- sample is drawn by the same sampling scheme and is capable of providing valid estimates of the population parameters. The comparison of sub-sample wise estimates shows the margin of uncertainty associated with the combined sample estimate.

Interpenetrating sub-samples have been used in NSS (i) to obtain valid estimates from each sub-round (season) of the survey round, and (ii) to ensure that Central and State samples for any State/ UT cover independent and equally valid samples of units.

The samples surveyed by the NSSO staff are termed as Central sample and the matched samples surveyed by State Government staff are termed as State sample.

Sub Sample (SubSample)
File: Block 7pt1 - Monthly household expenditure on footwear

Overview	
Type: Discrete	Valid cases: 33521
Format: character	Invalid: 0
Width: 1	

Description

An important feature of the NSS sampling design is that the total sample of first stage units is drawn in the form of two or more independent and parallel samples, termed as interpenetrating sub-samples. Each sub- sample is drawn by the same sampling scheme and is capable of providing valid estimates of the population parameters. The comparison of sub-sample wise estimates shows the margin of uncertainty associated with the combined sample estimate.

Interpenetrating sub-samples have been used in NSS (i) to obtain valid estimates from each sub-round (season) of the survey round, and (ii) to ensure that Central and State samples for any State/ UT cover independent and equally valid samples of units.

The samples surveyed by the NSSO staff are termed as Central sample and the matched samples surveyed by State Government staff are termed as State sample.

Literal question

How many pairs of the home grown item were consumed by the household in the last 30 days?

Interviewer instructions

Consumption of any of the items in the blocks, made out of home grown/produced stock i.e. out of goods produced by the household in its own farm or manufacturing establishments, during the last 30 Days will be recorded here. The quantity of an item consumed out of home-grown will be recorded in column (6) and its value will be shown in column (7). The value will be imputed at the ex-farm or ex-factory price. Home produced agricultural produced include any produce obtained from cultivation by household or obtained in the form of rent-share of land leased out. Produce brought from village home and consumed in urban residence will also be treated as 'home-grown stock.
